Nope... you'll have to settle with Lynx for text based web browsing.
That's what I use: "Connect" to access my shell account (I can use PPP
with my provider as well, but since I don't have any PPP software
it just won't do).... anyway, when I'm online I can access Lynx in UNIX-
very fast www access indeed! But no graphics :-(

Something else which works (I tried it once) is to use "CAB" (Crystal Atari
Browser) via a so-called "pseudo-SLIP connection", using a program on the
provider's side called "TIA" (The Internet Adapter).
It worked, but was VERY slow. You might want to try it though...
That is, if your provider has "TIA" installed- type: tia in UNIX to see.
To exit press CTRL-c several times (I think this is how I exited).
Good luck!

Hello,

I have a real collectors piece here. A new Atari PC4 IBM PC for sale.
PC comes with all original books, disks, and box.

Atari PC4 PC
Serial Number : 124 <-Yes #124 not too many around
286-16 CPU
Two video ports (analog and digital) for MDA, CGA, EGA, and VGA graphics
1 Meg of RAM expandable to 8 Meg
32 Meg hard drive
1.2 Meg 5 1/4" floppy
Has Atari labeled MS-DOS and Windows
Atari Keyboard
Can use Atari ST 3 1/2" external floppy drives.

Unit is new and in great condition and works fine. Asking $300 or best offer.

E-mail me or call 216-729-0761 evenings 6:00 - 10:00 PM EST

>ImageCopy4 and the other ImageCopy4?

I have no idea where you got the idea that Imagecopy 3.5 CD is also
called V4. The CD bit refers to the fact that it has the PhotoCD
format support.
I'm fairly confident that if it can handle normal Falcon resolutions
then it should handle Blowup fine too, not sure though.

*** shareware *** shareware *** shareware *** shareware *** shareware
***

Dear developers,

are you looking for an application-builder in order to see your ideas
become reality with a few fingertips? Are you bored from those aes-
and vdi-hesitations? Do you like to take advantage of a modular and
modern library-concept which you can customize the way you like?

Maybe ACSpro is the key to your whishes.

In the first place, ACSpro provides two libraries: the basic library
implements the window-, dialogue-, menu-, objectree-, filename-,
clipboard- and drag&drop-routines which can be participated by all
modules created with ACSpro in order to reduce memory-requirements and
to provide a common user-interface. The Plus-Library contains several
predefined window-classes which can be infinitely cloned: a
full-featuring text-editor (cut/copy/paste, undo, colum-blocking, free
fkeys), a protocol-window for printf-analogons, a plotter-window to
draw into, a font-sector-window and two generic desktop-window-classes.

The key for ligthning-fast development is the ACSpro-builder. It goes
ways behing an ordinary Resource-Contruction-Set: based on over a
dozen of user-defined objects (realtime-slider, string-popup,
3d-button, block-selectable edit-field, groupboxes, seperatos,
patterns, images, colour-icons, etc.) you can create dialogues,
toolbars and (popup)menus and test them immediately - further editors
for window-components, colour-icons, mice and referenced code are
included.

The later offer the opportunity to fill your application with code
inside the application-builder! Last but not least, an
integrated-development-environment-module controls your compiler,
assembler, linker and debugger - no need to leave the builder -
JIT-development.

Some additional topics:
- sophisticated window-structure with callback-code and referenced
datas
- easy2use drag&drop-facilities for innovative sofware
- enhanced userdef-object-structure with service-routines
- transparent use of popular aes-protocols
- support for os-indipendent, long filenames
- accessory-aware, dynamic memory-managment

- "oversized" textinput-objects with cut/copy/paste and
block-selection
- access to contextsensitive online-help-pages
- ......

Like to see some examples?

Yup, Mac's use CR's to signify end of line. PC's and ST's use a CR and a LF.
Unix uses LF's. You need to convert it. (I'm* still looking for a program
to do so...)

There is a bug in the current release version of STiK, it won't work with
pre-emptive multitasking. I've heard that MagiC has a singletask mode, but
I didn't see any way to switch it on the MagiCMac demo...

I came up with the exact same idea, but it would be too huge of a mess
to progam. What would be much easier and would probably have results after
a few days of hacking would be to use Lynx from the command line to grab
URL's..

Yes, I did it. It was not easy and it take me a lot of time but now it's done.
I'm going to write an explanation on how to do it, with a complete list of
needed software. And there will be an article in the next ST Mag (french
magasine). After it is installed, it is really easy to use. It doesn't need a
Minix partition nor the use of MultiTOS. As soon as the explanation will be
wrote, I'll put it on FTP site a.a.u.e and ftp.cnam.fr.

3635. Importing Phasar data into Quicken 5?

Newsgroup: comp.sys.atari.st
Date: 1996-08-31 00:00:00 UTC
From: Sam <sramirez@best.com>
Message-ID: <3228A146.7AA9@best.com>
Source record: 138888

Hi, does anyone know if there is a way to import data from Phasar 3.x to Quicken 5 for Win 95? I'd like to get all my records into Quicken without manually re-entering everything. I know Phasar can write to a Data Interchange File (DIF) format but I can only bring this into a spreadsheet like Excel and then it only exports my expense categories and budget categories. What I need is to have my transactions exported.

I would be willing to buy whatever Atari program that can export to Quicken.

Thanks,
Sam

So, to protest copy protection and 'being treated like a thief,' you're
attempting to gather cracked versions of software, so now you ARE a thief.
Hmm.. makes sense to me. Sounds to me like you're the type of person who
makes dongles a necessity for companies writing software for relatively small
markets like the Atari.

From: Mark Fassett <mark_fassett@intuit.com>
Message-ID: <3228B981.56E@intuit.com>
Source record: 138892

Hey, does anyone have an afterburner 040 up and running yet? I'm wondering just how Cubase Audio Falcon compatible they are. I've also been thinking about the Blow-Up FX board, but I'll probably wait until the fast-ram code is working so I can get more than 14 megs.

One more question.. does CAF take advantage of the FPU? I don't have one, so I was wondering if putting one in would speed up CAF.

Thanks.

3640. CAF File selector/partitions

Newsgroup: comp.sys.atari.st

From: Mark Fassett <mark_fassett@intuit.com>
Message-ID: <3228BA01.675E@intuit.com>
Source record: 138893

So.. since CAF's file selector only goes up to partition 'P'.. and we're
supposedly limited to 255meg SCSI partitions.. how do you manage to
access your partitions if you have more than 3 gigs of HD space? Do
you have to set up the desktop differently each time?

Sounds like a big pain.. is there another way?

From: jrc@accessone.com
Message-ID: <841532175.12775@dejanews.com>
Source record: 138895

I just installed IC4 and while it works very as a stand alone
prg, I can't seem to run it as an acc or prg with any other acc's.
I had to set up a "set" in XBoot withoput any acc's or the mouse
freezes or disappears when a drop down is accessed.

I'm using a 4meg Ste,hrd dr,NVDI4,NEODESK4,NEOCONTROL,XCONTROLL,and
STik. I've tried the suggested fixes in the manual-not fast loading
acc's & different placement of acc's with no success.

Any help with this would be greatly appreciated.

Thanks,
Jim Coile

I'm afraid there isn't a demo of N.AES what's IMHO pity. I use N.AES a
lot and sure there are some problems (sometimes the computers hangs
without any reason) but generaly it works fine. The most programs runs
with N.AES. Only some older programs like Convectt Zwei and Arabesk
pro have problems with N.AES.
Calamus SL (version 1995), Arabesk 2, Wordplus 5, Tempus 2.25, Everest
and even the good old Wordplus 3.12 just to name a few programs works
fine with it.

A short BASIC program (written specially for your purpose) will do it, but other than that, I haven't found anything that will allow you to make the filename longer. That seems to be a restriction held over from CP/M; it's in M$-DO$, too.

```
KM> Also, does anyone know the difference between ImageCopy3.5 CD
KM> which is called ImageCopy4 and the other ImageCopy4?

Um, I had Imagecopy 3.5CD, and upgraded it to 4.0 through Toad. It came with
the 3.5 manual, the 4.0 manual wasn't ready. Maybe that's the confusion? There
is a difference between 3.5 & 4.0 - 4.0 ofers much more printing flexability,
among other stuff.

or File
>Manager they simply are not there. Is there any PC software for
Windows or DOS

No one has really answered James' question. He has not found anything
at all.

I don't know how familiar you are with using the PC and the
CD drive James, but are you sure you are using the right drive letter
for the CD drive? Another problem might be that the CD is defective. I
bought the Walnut Creek Atari disc a couple of years ago and the first
one didn't work. They were very good and quick about replacing it. You
should be able to read file names and text files without any problem. I
like to use the shareware program LIST to browse files. You can also
copy with it.

Good Luck

Celia

>Must CDs including Playstation ones conform to a particular standard
>I can never remember the name, yellow or blue book or something like

Of course they are readable on a PC. Both systems (PC and ST) use ISO9600 format CD's. Just do a directory on the CD (or use Filemanager) to read the list of files on the CD (I assume you have the CD drive up and running on the PC). As Rich said, just copy from CD to floppy (use a 720K formatted floppy if your ST does not have a high density drive).

It still is not the right way to do this. You should offer to send the corrupted original disk to a person, and have them copy their disk back to yours.

Stufit archive? What computer are you running Monkey Island on?

Source record: 138999

Dan Phillips <xiting@worldnet.att.net> writes:

>From what I've heard, the ICD utilities do not support the ZIP, but you'd
>have to check with ICD or Toad to confirm.

ICD has a zip patch file available. All you should need is the Link II host adapter, the ICD utilities that come with the Link, and maybe the Zip patch file (easy to get on the Internet).

>> > I know I can buy Link to get the SCSI connection, but what about
>> > software drivers that will let me mount and format the ZIP disks

Well, you don't actually "mount" a drive (like you do on the Mac). You just need a driver for the host adapter (ie the ICD utilities that come with it) so the ST can recognize the drive. We're talking about an embedded SCSI drive here, so once you send the SCSI command to format, it is the drive itself that does the figuring out of how to do it.

Can someone help out with a dial script I can use with STick under MagiC Mac? My Falcon set-up works great, but when trying of connect with STick under MagiC Mac, STick thinks the Modem is online and asks if you want to dial anyway. Confirming this, the dial sequence is skipped and STick goes on trying to make a connection without dialing. The only odd thing about the Mac is I can't get RTS to work, so I have to go on with no flow control with MegaScape. The moden is a Supra 33.6.

Thanks for any info,

Mike

Can anyone supply info on the "Videomaster" either new or used?

3658. DXF Mac to PC file type question

Newsgroup: comp.sys.atari.st
Date: 1996-08-31 00:00:00 UTC
From: Michael Grove <mgrove@owens.ridgecrest.ca.us>
Message-ID: <32282441.3E8@owens.ridgecrest.ca.us>
Source record: 139003

I'm working on a alphabet for Cad 3D using Strada and Infinity on a Mac. Both applications will export in the DXF format. The Mac however seems to save the text (DXF) file with CR's different than a PC does. The Rosetta file translator does pretty good with simple "PC" type DXF files but crashes when a Mac type DXF file is loaded. Has anyone any knowledge of an application the will read through a Mac file and convert the text format to that of the PC format?

Thank's

Mike

3659. For those in the U.S. waiting and waiting for Expose.....

Newsgroup: comp.sys.atari.st
Date: 1996-08-31 00:00:00 UTC

Message-ID: <32282985.638B@owens.ridgecrest.ca.us>
Source record: 139004

Keep waiting :) I sunk a few hundred into my Mac for a video capture card. It is an older unit, but the only one in my price range (Video Spigot). I did have an Expose card for a while before returning it because of some minor problems, so I can make a fair compairson between using a Mac (50mhz 040) and the Falcon. With the Mac and Video Spigot there is one advantage. QT Movies can be captured direct to your hard disk at about 14fps/320*240 24bit color, with compression. The keyword here is compression. With anyone of several types of QT compression available, image quality falls very short of the quality of image capture available with the Expose card. Even with compression turned off, the quality, IMHO, is only about 1/3 that of the Expose/Apex combo. I also have Quick Flix, Avid Videoshop, and Adobe Premier (ok, older version :). NONE are as nice and easy to use as the Apex/Expose combo. For the price of Premier, you can buy and Afterburner, and for the cost of the Video capture card for the Mac you can buy Apex Media and Expose for your Falcon. With the 32mb of fast ram on my Falcon and Mighty Sonic, there is plenty of room to capture 30-40 second clips at near full screen. Run it through a genlock with an overscanned picture and you will fill your tv screen up. With the Mighty Sonic I was getting 17 fps at Apex's largest screen. I have read that SinPlops big dollar Power PC's can capture at 320*240 30 fps, but holley shit, look at the price. I'm no Speilberg, and this is just a hobby.
So I'll keep waiting for Expose to arrive in the U.S.

Michael Grove

P.S. So what good is the Mac? MagiC Mac of course. Phoenix (Zenomorph) flies on a 50mhz 040 :). Photoline is cool, and most of the "newer" softs run without problem, Calamus included. FT POV will render faster than a "040" compiled version under the Mac OS.
Now where is that 040 for the Falcon?

I personally agree with you about mudslinging, but if you think the only place it happens is in politics, wake up and smell the coffee. Turn on your television set or open a newspaper, and you will find someone knocking the competition.

It is a sad fact of life, in politics and elsewhere. I too wish that people would stick to advertising the positive side of their own product, but I doubt it's ever going to happen.

Version 6.6 works fine on Magic of you hold one of the two SHIFT keys pressed during booting. This will skip the system status screen, which is the culprit. Version 6,8 works entirely with Magic on my system, but not on all...so I am checking that out with 6,9, that I'll finish within two weeks...

3664. FS {UK ONLY} Atari ST serious software

Newsgroup: comp.sys.atari.st
Date: 1996-09-01 00:00:00 UTC
From: Steph@wuss.demon.co.uk
Message-ID: <841622201.21352.1@wuss.demon.co.uk>
Source record: 138810

I have the following for sale, boxed and with manuals (except GFA Basic, sa it didn't have any boxes, but the manuals are there).

AtariWorks - 50 UKP
GFA Basic V3 (full system inc interpreter/linker/compiler) - 15 UKP
GFA Bsaic V2 (full system, also includes GFA Vector) - 5 UKP

Also, books:

Concise Atari ST 68000 Programmers reference guide - 10 UKP
Atari ST Internals - 10 UKP

We'll discuss p&p costs when you get in touch.

Steph

3665. FS {UK ONLY} ST Hardware

Only one bit, mind you.

I have an external floppy drive, Cumana DSDD job, that I don't need.

All I ask for it is 15 UKP + 2UKP for P&P.

Interested?

Steph

3666. FS {UK ONLY} ST Magazine cover disks

Newsgroup: comp.sys.atari.st
Date: 1996-09-01 00:00:00 UTC
From: Steph@wuss.demon.co.uk
Message-ID: <841622200.21352.0@wuss.demon.co.uk>
Source record: 138812

I have a huge collection of ST mag cover disks. It is as follows:

ST Format: 4 to 77
61 to 73 (Subscriber's disks)
ST User: May 90 to Nov 94 (last one)
ST Review: 1 to 35 (last one)

Plus a selection of other cover disks.

Ideally, I'd like 'em all to go to the one place (to save on postage, y'see), and for them to get a good home. I'm asking for 15 UKP, and I'll cover postage and packing (which might be a bit nippy, considering the number of disks I'm talking about - *shudder*)

d> newsgroup.
d>
d> Not nice.

Hmm, adding a 3-line reply to an entire thread isn't too wonderful, either,
Dave. <G>

The original request was for general pirated files; onyl when he got jumped
on did Mark tell us he wanted just Cubase. I see two possibilities; no,
three:
(1) Mark was posting flamebait and did it on purpose. If this is so, he
deserves (and will get) short shrift.

(2) Mark needs to learn a little bit about the law, how to inspire software
developers, and Netiquette. He might get help, but it damn sure won't be
from me - I don't want my email posted all over Hell and gone.

(3) Mark is a pirate and assumed that everyone else is too. In this case, he
belongs back in the Mac and PC newsgroups where he claims he sees lots of
open discussion of where to get stolen software. Or he can talk to "JEDI"
(in email), the only known Atari user in my killfile (right up there with
sinclap) - there's someone who openly espouses piracy. Probably he likes
Ratsoft, too (might even be the guy who wrote it - now there's a product that
would be ironically deserving of being cracked).

We all know that if all cracked software that people owned was paid
for, the vast majority of Atari support would still be there. I don't
mind people using cracked versions of stuff that is no longer
supported but denying the makers of the real quality stuff (like MagiC
and NVDI) their hard earned cash isn't on

Tony Greenwood (STOSSER Software) says:

>Ok?, and when will you inform us all how to cross post

To crosspost articles simply add a comma and the name of the
newsgroup(s) to the end of the ``Newsgroups:'' line at the beginning
of the article.

Like this:

Newsgroups: comp.sys.atari.st,comp.sys.atari.programmer

This will cause it to be posted to both newsgroups. To post to more groups
just keep adding the names, seperated by commas.

m>
m> Perhaps you know if Imagecopy4 can be used for screen grabs in the
m> various resolutions that a Falcon(w/BlowUp) has to offer?

Of course. If you've ever seen any screengrab of a Blowup enhanced Falcon
I'd bet it was produced with Imagecopy.

m> Also, does anyone know the difference between ImageCopy3.5 CD which is
m> called ImageCopy4 and the other ImageCopy4?

Eh? Imagecopy CD v3.52 isn't IC4. There's a CD version of IC4 too. The
straight IC4 doesn't handle PhotoCD.

I couldn't disagree more .. It's backwards compatibility that made Intel
machines a success. You could either use old software or upgrade your
software. It was your choice. Millions upon millions agreed with that
philosophy.

Same with the Atari. I use a TT030. All of my ST software works on the TT
(I'm not much of a games player, so I couldn't vouch for that part). If the
TT needed something new EVERY TIME I TURNED IT ON, I wouldn't have gotten one.
I needed more speed, not new software. Newdesk and TOS 3.06 were nice too

Many thanks Richard. I've used UVK for some time and am looking forward to
the book ... but what is the "ST NEWS" interface? I think you are the
author of the ST News diskzine arent you? Any relationship to the "interface"?

You might want to get the Atari Discovery Pack, Chris.
It has a number of programs on it including SIM City. I think The Computer Dungeon has it in their liquidation sale.

.PDF files are used by Adobe Acrobat to provide a very nice printout (sort of like a standard DTP output file, but without the overhead of PostScript).

Adobe Acrobat read-only plug-ins are available for Netscape on the PC platform, and as standalone applications for the Mac and PC, free of charge from Adobe (and several web sites).

I don't know of any program on the Atari platform that can use PDF files.

I believe that PDF stands for Page Description Format.

This sounds like an extension of some routs that Doug Little posted on Nest a while back for the Falcon, could play any (RAW)sample at any frequency all you would need is unpacking code for the formats and volia.

Now if only someone could explain how to code this 68030 instruction in 68k I might get to work on it.

Instruction: divu.l #(basefrequency*2),d2:d1

See you earlier,

Steven

I only asked as I've seen so much open discussion of PC and MAC stuff... also
I'm still looking for help in finding a 'cracked' version of Cubase as my
LEGALLY PAID FOR vrs crashes all the time (sometimes not clean booting at all)
because the sodding dongle has worn...

Also, I have software that *cannot* be backed up or hard disk installed and the
software companies no longer support it. What happens when these items pass ther
'clip' date or get inadvertently corrupted (as is easy on an ATARI with a wonky
dongle still in situ!!!!!!!!!!!!!!!)

Who's being ripped off here?

Flame as much as you like - I have paid my money up front and thus a clear
conscience :-)

Mark.

3690. Cracked?

Newsgroup: comp.sys.atari.st
Date: 1996-09-01 00:00:00 UTC
From: bw343@FreeNet.Carleton.CA
Message-ID: <50bqiq$i4v@freenet-news.carleton.ca>
Source record: 138919

Why the uproar over somebody's recent message asking for cracked software? Seeing as Atari is virtually (if not literally) defunct and that software support for the ST is non-existent, why should we care if somebody wants to get software over the internet? I don't care enough about this issue to start debating it, but keep in mind that software is impossible to find in most cities.

>I couldn't disagree more .. It's backwards compatibility that made Intel

The point I was trying to make (decoratings finished so am in a
better mood<G>) was that Falcon and TT and any other ATARI enhanced
machine owner, will usually moan when software does not run on there
machine,
The biggest moaners would be software reviewers, I have had
complaints about games and especially about diskzine shells that I
have made(although all my shells are now falc' compat'), they knock
the product because it doesent work on the higher spec machines?,

My gripe is....How the hell do you make something compatable with a
machine you do not have access to?,

I own a 2meg STe, I make ATARI programs (over 50 so far), E enhanced
if possible,I do not own a falcon, so how can I program it?, Yet I
still get software reviewed with "points" knocked off because of the
above?, this has got to be stupid!,

PS!!!! How many Falcon owners are programming for the ST range ???
GOTCHA!!!

You naughty, NAUGHTY American! If I knew of such a site I would notify
FAST and give them you email address, and get every Atari user I know
to spam you, its people like yourself that started the ball rolling,
software houses not producing games for our platform because of
piricy. If you have any such software you should distroy it and buy
the software you require, send your shareware fees etc or else the
Atari will die forever.........

Err, it's ingenious marketing and product positioning (some illegal, most highly unethical) that made PCs big. If it wasn't for the stupid Americans (except those smart enough to buy Ataris), Atari and TOS would probably rule (or at least share the market with the Amiga and Mac). But there is a point to be made regarding making Atari software run on all machines, especially since the market is so small. Obviously you would be better off making the software work with everything, but I think that owners of newer machines tend to spend more on their computer in general, so the software should support the latest (or better yet, have a separate '030 version). Especially people who have had every 16/32 bit Atari made (except 1 or 2), like I have. Faster, faster, bigger, better. ;^)

> Same with the Atari. I use a TT030. All of my ST software works on the TT
> (I'm not much of a games player, so I couldn't vouch for that part). If the
> TT needed something new EVERY TIME I TURNED IT ON, I wouldn't have gotten one.
> I needed more speed, not new software. Newdesk and TOS 3.06 were nice too
> <grin>

When I had my TT, I had a lot of compatibility problems. That coupled with the cost of getting decent video led me to build a Mega ST 4 with T25 and ISAC. Ultimately I got a Falcon, because it could be made even faster, had better video, could run all the new cool Falcon software, and with Backwards, seemed to run more ST software. This is not to say that the TT is crap, though. I just was too cheap to pay for the video. Heck I got a 4/84 Falcon for less than a TT video card. As far as speed goes, my Falcon FX is easily as fast as my wife's DX4-120, so I think I can reinforce my primary point that inefficient coding or coding for older equipment cripples the maximum usability of a PC and explains why so many went to Win NT and Unix before Win 95 came out. Heck, even 68000 code runs faster

on an '030 Atari than '286 code runs on a '486, from what I've seen.

If you can get a true SLIP connection from them, then you can use the WWW131.zip package for STIK, CAB, AntMail, and MGFtp. This gets you a wwwbrowser, e-mail and ftp to a lot of sites, but you may end up like me and use your shell account for most things! The later versions of PINE not only do e-mail with a nice address book to save peoples e-mail addresses in, it also lets you read Usenet! If your provider has an older version you can ask them to update it or use RN, TRN, or TIN to read the newsgroups. here at telerama I have the choice of reading the usenet online or using some kind of UUCP software to download the news as a packet, or they have a cheaper account that just lets you do the latter! I find that most of the time I spend connected is to my shell account using Lynx, NCFTP, and PINE 3.91! Every once in a while I get curious as to what the various Web sites really look like and call back for a slip connection with CAB just to see the pretty pictures! I'd really hate it if all I could get was a slip connection! Luckily TeddyTerm does a decent vt-100 emulation and my ISP allows direct dialup to shell accounts, this way I'm not forced to mess with NOS or MINT to do what I want!

I've heard that MiNTnet version 0.90 does hang sometime. Try 0.80 if
you are using the 0.90. It should help if that causes your problem.

most BBS's allow you to turn line feeds on and off! Yours must be set to
off! TeddyTerm allows you to set wordwrap on in the terminal settings.
This might allow you be able to read enough to set the line feeds to on
in the BBS! Or you might call the sysop voice and have him edit your
settings manually!

Well...the way I see it, when it comes down to the actual 'usage' of the product itself, it all comes down to this: Put your money where you're money where your mouth is.

Pricewise, the Gemulator does seem like a good deal. And it now gives you a choice between a TOS chip or Magic. Also the way it 'interfaces' with Windoze does make it quite nice, I rather the Atari desktop then Microsoft Explorer :)

But, it'll have to actually back up it's claims by doing 'as' advertised and the support behind it must be top notch. In other words, people have to be happy with it six months after the pruchase. After all, the competition is getting hotter. And Magic PC is 'no' shareware product, ask any MagicMac user.

| Vidi-ST version 12 (no decimal ---- the "12" stands for
| 12 bit color capture) and this owner claims this is the
| latest and greatest version.
|
|
I would strongly suggest going with the VIDI-12. As a former owner of the original VIDI-ST (with v1.29 software), it is a nice unit for grabbing pics in grey-scale or pseudocolor, but when I moved up to a Falcon030, the VIDI-ST had to go, as it will not work on a Falcon. I have been informed the VIDI-12 not only will, but is also a much more capable unit, and includes a built-in color splitter.

Since this is c.s.a.s, I assume you have an ST also! If so then an editor like Editplus can display both file types and let you see the differences then, do a search and replace on the Mac file to make it conform to the PC standard! if you can't find where you put your copy of pure_asc, you can also use it to convert Unix text files to ones that display properly on an ST!

I agree. Atari has left us ALONG time ago (This subject can go on forever I do not want to even go there on this one). I remember when software manufacturers used to outright call ALL atari users pirates 'by nature'. Are you going to tell me that if somone posts a game written in 88 or 89 by a company that has long since died there is a problem??? There should be laws on the books pertaining to orphan machines and said software. I will openly admit I burn eproms of vetrex games (for personal use). What's the big deal???? Is mattel loosing royalities on a Vetrex machine??? If I copy Impossible Mission by Epyx(commodore lovers by nature) and give it to anyone on the internet does that mean they lost sales???? NO, they don;t even produce, package, or ship these games any more.

Don't bother e-mailing me, this is just my 2 cents

You wouldn't happen to still have the 1.29 version of the VIDI-ST
software would you? I have a VIDI-ST with version 1.2, and it cannont
do any of the pseudocolor or capture-stream saving. I have been looking
all over for a newer version, but ive been unsuccessful and I've had it
for over a year now!

Yes, but even if it did have all the lines, like the falcon, some
software drivers would still be required, and i doubt you'll see
anything of the sort come about..

Well this was all set in the 1980's with IBM 'automatically' named the
"standard". Billionare Bill helped to established the PC monopoly mainly
so Micro$oft can stay at the top making money.

Since broad based compatibility vs. state of the art isssue is so much to
put here at this time, I'll put up a posting later on.

> above?, this has got to be stupid!,

With STOS programs, broad compatiblity is much more harder. The first
version of STOSfix 1.0 will work from TOS 1.0 to 2.06. That's
compatibility on the ST range, the latest version of STOSfix still needs
to be used to run programs on the TT and Falcon. I think that works with
changing the program on the user's specific machine instead of what
'everyone' mostly use like 1.0

So IMHO, the 1.0 should be availible to work from 1.0 to 2.06 and tell people to use the new version to run on TT's and Falcon's. If all else, start writting "by-the-book" programs...but then Tony will have to change his name to "TOSSER" :)

>attempting to gather cracked versions of software, so now you ARE a thief.

And if I admit to such activity, that is ALL you can say about me.
If you were to say anything else about me, I could sue you out of your
shoes. Furthermore, if your original allegation is false: I could sue you out
of your shoes NOW.

I never admitted to such activity.

I objected to someone else's slander. This was slander from someone
such as yourself being morally pompous.

I also objected to the dellusion that copy protection protects
publishers from lost sales or keeps pirates from pirating.

>Hmm.. makes sense to me. Sounds to me like you're the type of person who
>makes dongles a necessity for companies writing software for relatively small
>markets like the Atari.

I also object to the 'Piracy kills atari' FUD.
Pathetically small marketshare due to total lack of advertisement in
non-atari venues since 1983 and other 'criminal' mismanagement is what
killed/kills Atari.

Atari shareholders should have taken Tramiel's head a LONG LONG time ago.

>> each
s>
s> Ok?, and when will you inform us all how to cross post, cause i'm
s> buggered if I know how to cross post???????????????

The details depend on what software you're using, but the result should be a Newsgoups: line with all the desired newsgroups name listed, seperated by commas and with no white space.

For example, you'll notice above the line from your original message. To crosspost that message to a couple of bases, it would have read:

Newsgroups: comp.sys.atari.st,alt.flame,alt.spam,pdx.test

And there you have it.

Sue me, baby. I'm using my own name. Come and get me!!

You're the idiot who posted in favor of owning and using cracked software,
while hiding behind a 70's pseudonym. Is it true? Yes. You can only sue
if it isn't true. If the glove don't fit, you must acquit (uh, sorry..
got carried away). :)

> I objected to someone else's slander. This was slander from someone
> such as yourself being morally pompous.

You say morally pompous; I say honest.

Please explain how pointing out the errors of software priacy is 'slander.'
Methinks someone needs to go back to their dictionary...

> I also object to the 'Piracy kills atari' FUD.
> Pathetically small marketshare due to total lack of advertisement in
> non-atari venues since 1983 and other 'criminal' mismanagement is what
> killed/kills Atari.

Irrelevant.

I never claimed piracy killed Atari. I'm saying piracy hurts programmers
attempting to make a small buck on an obscure platform. Give 'em a break.

> >Please, oh please, explain how my lack of creative insults has anything to do
> >with software piracy! I can't wait for this one!!!!!
>
> ....You do not understand....

..and that's all you can say? Evidently there is NOTHING TO understand.

Explain it to me, oh great one, so I can be as enlightened as you.

Later, dude!

3730. Question about Stalker/CAB

Newsgroup: comp.sys.atari.st

Source record: 138768

Any one else out there have this problem with www131. Stik connects fine, after selecting a url in cab it starts to receive data, the first few packets seem fine. Then cab displays a receiving data message and receives some data eg 1738bytes and stops, for quite a long time.(I've never waited for more than about 4mins), the only way I can find to get it moving is to hit escape, then it continues formatting text etc and needs to be tickled via the escape key again after receiving a small amount of data.
Any ideas?????? B-(

JEDI (JEDI@osu.edu) wrote:
:
: Actually, I advocated using piracy in a manner similar to shareware as
: software retail vendors are unlikely to even honor warranties on physical
: media without the threat of legal action (personal experience).

Violating the law with the justification of "they won't fulfill their
part of the contract anyway" is _still_ a violation of the law.

Incidentally, you can copy software. All you need is the _license_ from
the software vendor.

: Given the general state of disrespect for the software consumer,
: ensuring warranties of fitness and merchantability prior forking over
: the cash is quite justified : ethically.

I don't understand how copying software ensures "warrantees of fitness
and merchantibility". Please explain.

:
: I also stated that obtaining versions of the software that you've bought
: the right to use that are more fit and merchantable is also quite
: justifiable : ethically and even legally (both criminal and civil).
:

So your argument is that if I bought a version of software (say 1.0), and
a new version comes out with added features and bugfixes (say version
2.0), that I am within my right to obtain the new version without paying
an upgrade fee?

Let's put this in a different perspective. I buy a new car. A month
later, the manufacturer comes out with a new model which is substantially
the same, but has enhanced safety features, like airbags and ABS brakes.

By your argument, I am ethically and legally justified in stealing the
new car because of "fit and merchantability". I don't think a judge would
agree with you.

A Warranty of fitness and merchantability is merely the legal assurance
tha the software/hardware performs as it is advertised. It protects the
consumer in situations where the software release does not perform to
specifications. It does not cover situations where the software is
upgraded to add features.

The consumer cannot "ensure" fitness and merchantability. That is a legal
issue, and is dealt with in the courts. If the software vendor (store) is
not willing to accept a return of a product because it doesn't work, you

can sue them successfully. If you steal software, you are liable, and no
rationalization can change that.

: Furthermore, merely owning 'cracked' software only violates the authors
: rights to derivative works.
: It is not illegal by any stretch of the immagination.

Violations of legal rights are not illegal? I'm not sure I understand you.

: In and of itself it is not unethical. If it is I'd like to see
: the N.E.T. that allows this conclusion. Also, by itself there is no grounds
: for civil damages either.
:

Owning cracked software is illegal and unethical if and only if you do
not have the software license to begin with. For instance, if you own
Cubase 4.21 (the dongle version), and you have a cracked version, then
you can use the cracked version to your heart's content (as long as
backup copies are allowed by the software license agreement).

:
: >I never claimed piracy killed Atari. I'm saying piracy hurts programmers
: >attempting to make a small buck on an obscure platform. Give 'em a break.
:
: Irrelevant. This is not germane to my two current points.

Not irrelevant. Any discussion of piracy from an ethical and legal
standpoint must include this issue. If your actions affect the
programmers, then the programmers rights must be considered.

To make an important distinction: When you purchase a software package,
you are not buying the software, you are buying the license to use the
software. The author of the software retains ownership.

As a result of this, if you distribute this software without a separate
agreement, you are guilty of theft and breach of contract. If you own
software which was obtained without the license, then you are guilty of
receiving stolen property and beng an accessory to theft.

>I didn't see any way to switch it on the MagiCMac demo...

This is partially correct. Turn pre-emptive off (the timeslice CPX)
whilst STiK is enabled. You still multitask though, co-operatively
like Gem - but this shouldn't affect anything until a connection is
made. It doesn't under my ST MagiC 2 anyway.

I _think_ this is down to the Mac itself. My Supra manual requires a
different &F? init for the Mac. Having done this, you might need to
mess with default.cfg so STiK knows what's going on also.

I don't have a Mac which is why I can't any more specific. I do know
it can be made to work though.

R>
R> You first. You have NO idea what you are talking about. NONE of you
R> pundits do, despite your pomposity.

Really? Somehow I fail to see how pomposity relates to knowing what constitutes theft and what does not. Let's try this: Assume I am running Ratsoft. Assume I have not bought it, but rather that I have cracked it. According to my definition, I have stolen it. According to yours, I'm "just trying it out" or some such mealy-mouthed phrase.

You call those who champion honesty "pompous," while maintaining multiple usernames (probably multiple accounts) at Ohio State University. Given your history, I wonder if you have even paid the low (partially-subsidized) fee for access to /one/ of those accounts, but that would be ad hominem, so let that go for the moment.

>> (3) Mark is a pirate and assumed that everyone else is too. In this

>> to "JEDI" (in email), the only known Atari user in my killfile (right up
>> there with
R>
R> Yes, how DARE I stand up for the rights of someone for whom you
R> believe deserves NO rights.

Actually, as "JEDI" you've been in my killfile for weeks simply because neither you nor sinclap make a lot of sense on most issues, and rather than clutter up my hard drive with your particular brand of venom, I choose to let your discussions remain invisible. "JEDI" is an alias that was used to post for a very long time without a valid email address, as you well know, making it impossible to respond in email when that was appropriate. I found it easier to avoid the temptation to followup with inappropriate comments when I didn't see postings by "JEDI" at all.

As for standing up for someone's rights - you are conversing with someone who spent 23 years risking his tender pink body in the US Army so that young, unhousebroken puppies like yourself would be able to go to college without having to learn Russian or Chinese first. Strangely, I can't recall ever reading anything in the Constitution, nor in the Amendments to same, about "the right to steal the fruit of programmers' hard work and use it without paying for it." Perhaps you would care to enlighten the rest of us as to the exact location of that guarantee?

R> Yes, how DARE I state the folly of copy protection that has never
R> stopped any pirate I know of.

Actually, that is probably quite a revealing remark to those who are aware of your history as a pirate. It's not inaccurate, of course - locks (and copy protection) only keep honest people honest, and in most cases, are easily foiled. In point of fact, I make a practice of making copies of copy-protected software - for myself; so I don't have to buy a new copy (which might be hard to find) when the original wears out, and for anyone who did buy the original, which /has/ worn out. That, however, isn't piracy -the law calls it "fair use" as you well know.

R> Better that you hide your eyes, cover your ears and let the world
R> pass you by...

Perhaps. Or perhaps you are deliberately distorting my position so as to make yourself look (to the ignorant and naive) like an honest citizen.

>> - there's someone who openly espouses piracy. ...
R>
R> Under a very limited set of circumstances mind you. You conveniently
R> neglect that part. You moralists seldom live up to your own piousness.

I wouldn't call it "piousness," nor even "moralism," but slapping emotionally-charged labels on a position that one wishes to oppose is an excellent tactic - in politics and the courtroom. It isn't respected by /thinking/ people, however. You talk like a lawyer (that's intended as an insult) - willing to argue any position with equal venom, er, vigor, as long as there's a profit in it for you.

You back-peddle very well, by the way. Anyone who came into this conversation late and was unaware that Deja News allows them to read the entire thread would think you were being unreasonably attacked.

>> Ratsoft, too (might even be the guy who wrote it - now there's a product
>> that would be ironically deserving of being cracked).
R>
R> Guess who?

Thank you for confirming my suspicions about "JEDI" at least.

Followups redirected.

If you want to do some multitasking and the like, then you're much better off getting MagiC instead. There's just no sense in getting a $60 TOS chip(just to get an image of) and $60 of Geneva and more for a desktop which all ends up replacing most of the TOS chip. Now if some kind soul would come up with a way to use MagiC on STonX...say, didn't I talk about this many months ago? :)

Umm...I think that it's the images for AtariDOS and the ROM chips that's for the 8-bit emulator. I hardly think Darek would include TOS images in such a package, not after the spouting he did about the whole thing a long time ago. :)

3748. Oasis v1.35/Modem hangup

Newsgroup: comp.sys.atari.st
Date: 1996-09-02 00:00:00 UTC
From: bkozlowski@nordnet.fr
Message-ID: <841746678_OASIS_@nordnet.fr>
Source record: 138778

In article <841492314_OASIS_@pcc-uky.campus.mci.net>
thechyld@pcc-uky.campus.mci.net (Ronald J. Hall) said:-

>I'm using Oasis v1.35 with a Supra Express 28800 modem. My problem is,
>that at the end of an online session I can't get the modem to hangup

In NOS, type "ppp pp0 lcp close" (pp0 is the interface name as
declared in the attach command, could be sl0, check in your startup.nos)
and the modem will hangup 5-10 seconds later, then type "exit" to exit
NOS. I have assigned this to the F2 function key, in my startup.nos I have
a line (with the double quotes this time!):

fkey 60 "[command]ppp pp0 lcp close"

If this doesn't work, you can go to the "dumb terminal" in NOS, typing
"tip pp0" (or sl0) and once in the terminal session, type "+++" without
CR, wait a little bit (one second, until the modem says "OK"), then type
"ATH" and [return]. The modem must hangup immediatly. Then type F10 to
quit the terminal session, and at NOS prompt type "exit"...

If this doesn't work, check the modem config. Eventually the
escape-to-command-mode sequence could be something different from the +++,
the ASCII code of the "+" (43) is, IIRC, in register S2. "ATS2?" to see
the value, "ATS2=43" to set it. And the necessary minimum delay without
data before and after the sequence is in register S12, in x/50 seconds,
mine is S12=20, so 20/50 is 0.4 seconds.

And don't forget that if you use serial speed 115200 bps, with the
Falcon you can have lost characters in certain circumstances... like if
you move the mouse (!). I reduced the serial to 57600 (134 in modem.cpx),
and have no more transmission problems.

: >JEDI wrote:
: >> Fine, if you like dongles, like disks you cannot make
archival backups of, and like packages you cannot install to a HD,
then that is your sick twisted little business. So, to protest
copy protection and 'being treated like a thief,' you're attempting to
gather cracked versions of software, so now you ARE a thief.

: And if I admit to such activity, that is ALL you can say about me. If
you were to say anything else about me, I could sue you out of your shoes.
yaada, yaada, etc.

...SORRY to join the controversy late BUT, the issue here is personal
ownership of a piece of property. I program a product, license your use
to use it, and later decide to not license the program anymore. That does
NOT give the rights to anyone else because I own the program. I am the
only person who has the right to license the product to others. If I
choose to stop licensing, that is my choice, I am the owner of the
product. The computer user in this case does not own the code, just
licenses the use of the product for unlimited or limited use, not for the
ability to re-market it, even for free.

...A parallel would be the creation of a painting. The property belongs
to the painter and it is his to keep or sell. If he wishes, he can make
reproductions and sell them to others, but his original painting is his
to keep as long as he wants to keep it. If he chooses he can sell the
original painting to someone else who MIGHT wish to make their own
reproductions and sell them, but because they BOUGHT the original, they
have the ability to distribute it as they wish.

...In our software parallel, the programmer/developer owns the original
code, he did not sell it to anyone, nor did he allow anyone to make
copies for distribution. If some does, HE IS A THIEF, just like anyone
who reproduced the painting while the painter still owned would do so
without permission or license. THE PAINTER OWNS THE PAINTING, THE
PROGRAMMER OWNS THE CODE.

...If you have the ability to paint your own painting, go ahead and do
it, if not, don't steal the painters property without just compensation.
If you feel it is necessary to crack some Atari program, make a business
deal with the owner of the code and then sell the program with just
compensation going to the originator. If you can not get that licensing
agreement accomplished the YOU ARE A THIEF when you sell or giveaway

property originally licensed to you for use ONLY. If you don't own the code, you don't have the right to give it away, or sell it. It is not yours to deal with.

Best Regards to all. This argument crops up about every 6 months, and generally I wait awhile before I add my two cents worth. Developers for the Atari Market are not controlled by the business dealings of the Atari Corporation. Atari's failure should not make developers fair game for pirates. The program originator had little to do with the Atari Corporation failure, in fact he might have delayed it by some months or years depending on his technical contribution to the market. He does not deserve your ire for things not under his/her control.

Well, actually, no. Netscape is a fine browser, but it's a mediocre email engine and an absolutely abysmal newsreader. IMHO the only people using Netscape to post news articles are (a) clueless or (b) too busy to find a /real/ newsreader. Posting binaries that are encoded by Netscape is a good way to get kilefiled at the office, so I don't have to wade though future postings that are useless. At work, I use NesXpress; on my wife's 486, I use Agent; and you can look at the X-Mailer line on this message to see what I prefer. <G>

Uh, this sounds a little silly to me! why would you want to run STiK on
MagicMac in the first place when the REAL mac already has MUCH better
internet support, is a lot easier to setup, and the programs work!?

Howdy !

Well, I have this single-sided double-density drive which I replaced
with a DS/DD device, so the box & supply are occupied.
It worked perfectly all the time ...

It's free, shipping to Europe somewhere should not exceed some US$ 5.-,
and to US some US$ 10.-.

If you want it, please reply to tomislav.digas@fer.hr or (better)

tomo@fly.cc.fer.hr

Good luck !

Sounds like the advice that is typical of clone users. Why write good software when you can just keep buying new hardware every year to make up for slow and inefficent software?

The question was what is the best viewer for an STe, not what is the best hardware for viewing pictures. I stand by my advice above.

3761. NVDI print to IMG Help

Newsgroup: comp.sys.atari.st
Date: 1996-09-02 00:00:00 UTC
From: fl@zap.io.org
Message-ID: <50g3bl$qtk@zap.io.org>
Source record: 138791

jklimch@curly.cc.emory.ed wrote in NVDI print to IMG Help

j{ I use NVDI 3.02 on a Falcon. I want to use the Save as
j{ IMG function
j{ so I can use Straightfax without rebooting with speedo
j{ for faxes. I
j{ can't get this function to work.

I recently got NVDI 4.11 and have been going through all the "easy to install", but hell to configure business...

I have found that you can use a text editor to introduce the Straight Fax driver as device No. 22 in the ASSIGN.SYS file that NVDI uses. If you do this, then you have the option of "printing" to a fax file that Straight Fax uses, even from Works. Another method that works, although not quite as well, and is more involved, is to save the Works document as an Image file. You do this in Works, not in Straight Fax.

Create your document in Works and to save it as an image, first select the whole text (highlight it), then hold down the "Alternate" key and select "Copy" under the Edit menu. (It's either this or else there is a "Copy Special" menu selection) A dialog will come up and ask you whether you wish to save what you have selected as a GEM Metafile. If you select this, you will find a file in your Clipboard folder (you Have set up your Clipboard, haven't you?) with a name like SCRAP.GEM or something like it.

Quit Works, and open StraightFax where you will have the opportunity of importing a variety of file types, including .FAX, .GEM, .TXT and .IMG files. When you select .GEM, the file selector will come up and you can navigate to your Clipboard folder to retrieve the file you created in Works. You can view the contents of the file, just to make sure that it is what you want. From that point, you can send normally from Straight Fax.

When I do this, however, I get the original text but with black boxes where all the spaces go -- no doubt it uses a bit of toner at the receiving end...

In all, it seems easier to put a copy of STFAXSPD.SYS into the GEMSYS folder used by NVDI and alter the ASSIGN.SYS file to include it as an additional printing device (device nos. 21 to 30). I've found that NVDI screws up the positioning of my document viz-a-viz the margins for my HP LaserJet 5L printer so that I have to enter some odd values in Works for the document to show up in the right place on the page. I have yet to send a Fax created in Works and "Printed" through the STFAXSPD.SYS device, to see whether the spacing is similarly screwed up at the receiving end of

the FAX, but I think that it does as well.

In all, I'm finding NVDI to be a badly implemented Kludge: cranky to set up, incompatable with fonts that SpeedoGdos was perfectly happy with, and unable to format documents for my printer properly. I am seriously considering going back to SpeedoGdos 5, and getting the screen acceleration from some other means, such as Warp 9 (Anyone know whether this will work properly on a TT?).

Really, what the Atari world needs most, in my opinion, is some updated printer drivers to take into account the more recent developments in printer technology that are available today. If I could just find something that would work properly with my 5L, I'd be very happy.

Regards,

Not someone else's CDs, no. And I haven't had time to put my own on tape for I can't recall how long.

Like anyone else, I /have/ had pirated software. Some time ago (we're talking years, here), I realized what I was doing, and destroyed all pirate warez I had that I hadn't purchased a legitimate copy of. With the exception of Freeze Dried Terminal, which is a gray area (the author has reportedly permitted distribution of the key file, and certainly has cashed checks for which he hasn't delivered anything), I don't have anything now that I didn't buy and make a working copy for myself. So while I may have erred in my youth, I'm being pretty darn careful now to support the remaining developers - including whatever shareware I need and can pay for. My feeling is, if it's not available as shareware, and I just can't afford it as commercial ware, I probably don't need it at all.

> I need a new Joy stick for my ST. Where can I find a quaility joystick for
> sale

Find an old NES controller, (got one at a garage sale for $0.10...) desolder the cable, scrape the insulation off the test points, then wire the test points to the joystick port... (I used the cable from a broken joystick...)

Or find any Sega Genesis (Megadrive?) controller. Should work without modification, though only the B button will do anything. Even the fancy autofire ones should work... (never tried this one...)

MF> do you manage to access your partitions if you have more than
MF> 3 gigs of HD space? Do you have to set up the desktop
MF> differently each time?
MF> Sounds like a big pain.. is there another way?

Hi Mark,
There certainly is another way:
Buy SCSI-tools or HDDriver and set the partition size to a maximum of 512MB. In SCSI-tools you then have to set the sector size of each partition to max 8kB. In HDDriver you solve this by ticking the "use minimum sector size" before you partition and you'll get 8kB sectors if possible, but the maximum is 512MB if you want to keep it CAF-compatible.
If you use HDX to partition the HD, you automatically get a sector size of 16kB if you choose more than 256MB, and you don't have an option to change the sector size at all.

Best regards,

Claes

You can solve this by simply changing some options in NVDICONF.CPX (i think the 'line-A' or the 'compatibility error' parameter). Try different setups and reset if necessary. It works fine with the demo version i got on my falcon some monthes ago ;)

>in the wind.

We never even touched upon the ethics of software piracy.

We did touch upon the legal consequences of libel and slander as well
as the hipocrisy about somone who acts anal wrt to the 'percieved' rules of
copyright then neglectss the rules regarding libel and slander.

Also covered was the effectiveness of copy protection.

Your obsession with my real identity only justifies my use of an alias.
It also shows that you've run out of any better ideas.

Someday, you may choose to address those ideas. Until you do, you are
teh real coward.

Never given was any justification for accusing that bloke of commercial software piracy. Not even a lame one was given.

Never given was anything to support the contention that copy protection measures protect software publishers from unlicenced use.

I am still awaiting some justification of your point of view. As of yet, all that the 'morally superior' side has provided is character assasination and louder and louder statements of their point of view.

The ethics of software piracy has NOT been an issue in this sub-thread, despite your attempts to use it as a red herring.

>
>Sue me, baby. I'm using my own name. Come and get me!!
>
>You're the idiot who posted in favor of owning and using cracked software,

Actually, I advocated using piracy in a manner similar to shareware as
software retail vendors are unlikely to even honor warranties on physical
media without the threat of legal action (personal experience). Given the
general state of disrespect for the software consumer, ensuring warranties of
fitness and merchantability prior forking over the cash is quite justified
ethically.

I also stated that obtaining versions of the software that you've bought
the right to use that are more fit and merchantable is also quite justifiable
ethically and even legally (both criminal and civil).

Furthermore, merely owning 'cracked' software only violates the authors
rights to derivative works. It is not illegal by any stretch of the
immagination. In and of itself it is not unethical. If it is I'd like to see
the N.E.T. that allows this conclusion. Also, by itself there is no grounds
for civil damages either.

Owning cracked software frees you from the dongles, copy protection,
codewheels and other hoops that developers put you through when you go to the
trouble to do the 'right thing' and buy the thing.

However, this was ancient history.

>while hiding behind a 70's pseudonym. Is it true? Yes. You can only sue

Cracked != pirated.
That is a very important distinction that escapes you.

>if it isn't true. If the glove don't fit, you must acquit (uh, sorry..

I can sue any time I want to. Your naivete regarding the legal system is
quite remarkable.

>got carried away). :)
>
>> I objected to someone else's slander. This was slander from someone

>
>You say morally pompous; I say honest.

Self deluded would be a more appropriate adjective.

>
>Please explain how pointing out the errors of software priacy is 'slander.'
>Methinks someone needs to go back to their dictionary..

The twat accused a total stranger of a felony without any real
justification in a publishing medum.

My diction is fine.

You just can't stand the fact that a pirate might not be completely
evil.

One crime (percieved or otherwise) does not necessarily imply another.

>
>> I also object to the 'Piracy kills atari' FUD.

The original TOS was available in disk form. Perhaps you could find a soul willing to sell you their copy.
Any other form will require some sort of copying. If you even hint at piracy around here you will become a political pariah.

Pomposity III up there was attempting to steer you towards the GEMulator. (Xformer's an XE emulator)

I would imagine (cause of your STonX interest) that that is NOT what you are interested in.

Out of the ether, the following was mentioned by Neil@yr-ynys.demon.co.uk...:

N> I have an EIZO flexscan 6500 (multisync) 21" mono monitor running in
N> 1280x960 on my tt (tt high). It also does _all_ of the other
N> resolutions and made an excellent job of st high from an stfm. Very
N> much worth looking out for (worth around uk300 s/h in good
N> condition).
Well I would have said it was worth more than that but my desk wouldn't have stood up to the strain of the EIZO plus my new 20" CTX Multisync so I had to sell it! ;-)

BTW Hows it going? Still working fine I hope.

The EIZO Flexscan 6500 is an excellent monitor no matter which machine you run it on (even a PC or Mac). Its just a case of getting a hold of one.

j> However, I can't get Atari Works to recognize it. It just prints out
j> with the regular printer driver. This is true even if I save the
j> Printerconf with the img.sys driver. If I close the CPX window then
j> re-open it, I'm back to the printer driver again. Any ideas?

Yup. That is only for configuring the IMG Driver, the program needs to select right driver for it to work, in this case I believe its 91, try shoving the IMG Driver in the Assign.sys as driver 22, assuming that Atari Works can cope with more than one printer.

See you earlier,

Steven

I'd guess that sector 0 of the disc is getting intermittently unreadable. You need to un-protect the root sector and find some way of re-writing it after a successful boot-up. I use ICD stuff and there is a utility to do this. I don't know what you have in HDDriver s/w but look for something which allows you to re-partition the disc - this should rewrite sector 0.

Yes.

k> Should the resistor packs on the Conner matter? The drive is in a
k> external case and I've tried it terminated and not terminated with
k> the same results.

In theory, if the Connor is the only device in the SCSI chain, it should be
terminated.

k> I have tried changing the drives SCSI id thinking that there may
k> have been a conflict but this did no good.

ICD s/w doesn't care what the ID is as long as it doesn't coincide with that
of the clock (ID 6) if you have it.

k> Any ideas? What am I missing?

Might sound a silly question but do you have power supplied to the Link? Try
configuring the Connor so it supplies TERMPWR to the SCSI bus.

There is a MAC program called 'Drop Text" which converts MAC -> PC text very well. It also converts PC->MAC, as well as UNIX->MAC.

It has a host of other features, I believe it's freeware.

Should be on Umich, in the MAC section.

I'd be willing to bet money that Epyx doesn't even have the code anymore, I know no one at WP knows where to find the code for the Atari version of 4.1.

3796. IC magazine Report Ammendments

Newsgroup: comp.sys.atari.st
Date: 1996-09-02 00:00:00 UTC
From: Matthew Townsend <mabb23@dial.pipex.com>
Message-ID: <322B1740.1519@dial.pipex.com>
Source record: 138843

On sun 18 Aug I issued an email entitled 'Report on new ST magazine (IC)'
concerning a new UK ST-based publication called 'IC magazine'.
Unfortunately there were errors in this document:

1. Another magazine called Atari Computing is actually to be published
every six weeks and not every two months as stated.

2. Please ignore all other references to Atari Computing.

3. IC magazine will now be published every fornight (although occassional
ly it may be necessary to skip a fortnight due to other pressures).

4. Our figure for the number of people we hope to be buying IC magazine
in one years time should read two thousand.

A document containing launch date and subscription form should follow.
Regards, Matt.

>as i was considering a replacement for aes to use
>under mint, i got a message about XaAES Beta 5,
>with a pointer to http://www.i-way.co.uk/~c_graham/files.html
>which appeared invalid.. :<

I don't recommend beta5 - I recomend waiting for beta6, as
the compatibility is much better (and it also supports NVDI4).

>has anybody found a way to grab it, is there an ftp site
>holding it ??

Johan Klockarrs has it on his site @ rand.thn.htu.se

>while i'm at it, could anybody give the minimal config needed,
>Tos version, Ram size and what desktop can be used - will
>Thing or Gemini fit ?? (will a 4/30 megaST be OK ??)

Minimum config ? Don't know, but I developed most of it on a
f030 4Mbyte/32Mhz. Thing 0.59 works, as does the latest Thing
beta's - but Thing1.0 doesn't for some reason. I've never tried it
with Gemini, but I believe there are problems with it....

Craig.

Source record: 138845

Rodentia@osu.edu (Rodentia) mumbled indistinctly:

> You first. You have NO idea what you are talking about. NONE of you
> pundits do, despite your pomposity.

Grow up. When I was a little boy, I cracked games just to prove I could do it. I removed the copy protect from old Dragon32 games so I could put them onto disc instead of using tapes. I broke into ST games to see how they did what they did. I never gave away what I'd done, I did it for me, from my originals.

Now I write software for a living, and would be very upset to have someone rip my softs off because of some lame 'all software should be free to who wants it' bullsh*t. Current sourcable software should not be copied. (my comercial work isn't on the atari anyway, so no worries)

Soft's which can no longer be sourced (company is dead, company has discontinued program and will not sell you a copy) are a different matter altogether and may well be a valid crack & distribute target, as no-one is being robbed (the company doesn't want your money, and won't sell you the program).

>>(3) Mark is a pirate and assumed that everyone else is too. In this case, he
>>belongs back in the Mac and PC newsgroups where he claims he sees lots of
>>open discussion of where to get stolen software. Or he can talk to "JEDI"

I know the groups he means - it's commical. Example:

Visual C++ 4.2 (15000 lines, part 1 of 58).

If you have to pay your own phone bill, it's much cheaper to buy the programs anyway, as the time taken to download them would be unreal.

> Yes, how DARE I stand up for the rights of someone for whom you believe
>deserves NO rights.

> Yes, how DARE I state the folly of copy protection that has never
>stopped any pirate I know of.

Chill out man, you're wound up so tight, a lump of coal up your backside gets you a diamond in 3 weeks....

The idea of copy protection is not really to stop your dedicated hacker (who will always find a way through it anyway), it's to detter your casual copier grabbing a copy from the guy in the office or his mate in the playground.

> Better that you hide your eyes, cover your ears and let the world pass
>you by...

Yawn.

> Under a very limited set of circumstances mind you. You conveniently
>neglect that part. You moralists seldom live up to your own piousness.

Want to bet? I do my bit for free software, because open & free
standards are fun to work on and great to be involved with.

BUT I DECIDE MYSELF WHAT I WILL GIVE AWAY - I WILL NOT BE DICTATED TO
BY A JUMPED UP ZITTY LITTLE SAD CASE WITH NO LIFE, NO MORALS AND NO
BALLS.

You obviously haven't tried 'archie -s lps123' ? It gave me
ftp.uni-stuttgart.de/pub/systems/atari/audio/players. Just fetched
it, but haven't tried to run it yet. Trying to access sounds.sdsu.edu
instead, which is mentioned in the lps docs as having lots of sound files.
Doesn't respond, however :-(

Cheers Peter

>> above?, this has got to be stupid!,

Eric your following post is missleading and goes a long way to
helping peoples beliefs that STOS is still living in the past, so ya
bedder duck mate :)

>With STOS programs, broad compatiblity is much more harder. The first

No it is NOT, I can make my programs run on ANY tos version, my
current project has been tested and runs on everything, every tos
version, and the people doing the testing (many in this newsgroup)
have NOT HAD TO DO ANY FIXING,the problem is not that it wont run, the
problem is that the higher spec machines such as Falcon and TT make it
run tooo bloody fast and not as intended, therefore re programming is
needed, not fixing, but how do you reprogram to make it work on a
machine you dont own?,

>version of STOSfix 1.0 will work from TOS 1.0 to 2.06. That's
>compatibility on the ST range, the latest version of STOSfix still needs
>to be used to run programs on the TT and Falcon. I think that works with
>changing the program on the user's specific machine instead of what
>'everyone' mostly use like 1.0

Get into the present, bloody hell this really gets up my nose, does
no one read my posts, I can make a program that will work on ALL tos
versions, it will not need fixing by anyone, the fixing is done when
compiled, and will allow my programs to run on anything,

>So IMHO, the 1.0 should be availible to work from 1.0 to 2.06 and tell
>people to use the new version to run on TT's and Falcon's. If all else,

BOLLOCKS....You suprise me Eric,
I will explain (AGAIN!), Programs already made with STOS will need
fixing to work on machines with tos 206 or above, there are many
fixers about,
But we are talking about programs being made NOW, these DO NOT NEED
FIXING! sheeeesh,thats what the thread is about, not old programs,

>start writting "by-the-book" programs...but then Tony will have to change
>his name to "TOSSER" :)

Gosh thats a good one, nearly fell off my high chair when I read it,

WHY WHY WHY, Why write it by the book, mine works on all tos
versions, writing by the book means it would not be faster on the
falcon or TT, but then you lose the possibility to enhance for that
machine, at present I can release the source to a falcon owner who can
enhance the game, thus slowing it down, and you have a decent falcon
game,
writing by the book is a rrediculous suggestion, I know you where
having a laugh as well, but still a useless idea? <smile>

STOS has been upgraded and is worthy of a programming language in
1996, I CAN PROVE IT,

Yes Eric I did go a bit "mad" at you,<SMILE> No offence meant mate,
But as you use STOS then I am suprised that you are helping people
live in the past, STOS is no longer the incompatable programming
language it used to be, I have tried to get that accross to people,
BUT YOU AINT LISTENING!

Programs being made now with STOS can be fixed while being compiled
and do not need to be fixed by the user,

Cheers.............!ynoT

A case for a new moderator not for removal of the group. Put me in
charge of all moderated groups. I'll guarantee I'll ignore
every posting then I'll remove them all for lack of traffic. Wouldn't
go down too well would it? What the heck though - us atari users are
a minority so we deserve it.

The main reason I can't find stuff is there's so much garbage there,
bad or no descriptions, outdated versions etc.

>Also, it should be rather obvious that taking up space on tens of thousands

Distribution cost is irrelevent. The whole point of usenet is to
distribute news to all. You are advocating selective censorship.

>>>The huge number of IBM users makes distribution via Usenet a lot more
>>>defensible. It might even save bandwidth if a large enough number of
>>>people want the files. That'll never be the case for Atari users.
>>

>
>Uhm, I must admit I have no idea what you're talking about here.

There is a bug in one of the main clients (Nos 0.42) where it corrupts
any article posted [printf(s) rather than printf("%s",s)]. Having
identified it, it is possible to bypass it.

>If it has something to do with postings in alt.binaries.atari.st (or
>whatever the new group is called), I can't comment since I'm one of the
>apparently rather large group of people who can't access that easily.

If the a.b.a group were visible widely there would be no need for the
creation of a new one, except for the problem mentioned earlier.

I don't think we are going to ever agree on this are we? :-)

3807. STacy4 FS

Newsgroup: comp.sys.atari.st
Date: 1996-09-02 00:00:00 UTC
From: aa778@cleveland.Freenet.Edu
Message-ID: <50ek74$42n@madeline.INS.CWRU.Edu>
Source record: 138854

Hello,

I've decided to sell my STacy 4 because I just don't use it enough.

Atari Portable STacy 4
4 MEG RAM
52 MEG SCSI internal hard drive
720 3 1/2" floppy
External Power Supply
Corduroy/nylon carrying case with handle and shoulder strap
Has standard ST ports. MIDI, Parallel, Serial, Mouse, Joystick, DMA, Monitor
Has built in track ball, but if you wish you can use a mouse
Has built in backlit LCD 640x400 mono screen.
You can hook up either an external color or mono monitor.

Unit is in great condition and works fine. Asking $600 or best offer.

E-mail me or call 216-729-0761 evenings 6:00 - 10:00 PM EST

Well, at least a voice of experience finally speaks.

Their understanding of the law is still incorrect, however.

[deletia]
>If you have to pay your own phone bill, it's much cheaper to buy the
>programs anyway, as the time taken to download them would be unreal.

Any justifications for piracy became quite periperal to this thread
rather quickly. I criticise the effectiveness of copy protection and stand up
against unjustified allegations against 'an evil one' and all they can do is
ramble on about how bad piracy is.

They're hypocrites.

>
>> Yes, how DARE I stand up for the rights of someone for whom you believe

Are u sure you were an Atari pirate?

Acopy and MSA were always quite available on the boards for even the most
casual swappers. They could even be found floating freely around PD bbs's.

>
>> Better that you hide your eyes, cover your ears and let the world pass
>>you by...
>
>Yawn.

When I fully disclosed to a lifetime cloner the crap that Atarians have had put up with wrt copy protection schemes, she was surprised that Atarians put up with it for as long as they did. The ones around here [Atarians] mass defected to clones as soon as they became cost competitive.

>BUT I DECIDE MYSELF WHAT I WILL GIVE AWAY - I WILL NOT BE DICTATED TO
>BY A JUMPED UP ZITTY LITTLE SAD CASE WITH NO LIFE, NO MORALS AND NO
>BALLS.

This is precisely what I've been talking about for 8 YEARS. There is no respect for the consumer in Atari-dom. You've alienated everyone but the 'no-lifers' and the terminal cheerleaders. Now, everyone is BUYING PC wares, even the pirates.

Furthermore, your assertion that advocacy of one sort of unethical behaivor implies no morals at all seems to show that Gilman and company were REALLY on to something. You blokes really are a morally retarded band of thieves. If draconian measures don't keep you in check, you'll steal the store. A single cracker will 'contaminate' the rest of you.

Nevermind, that you have a very limited idea of what 'not taking it from the asshole developer' could mean. That you would presume that it only encompasses non-licenced usage of cracked wares really indicates what a thieving mentality you all have: even the pious ones.

To the bloke in Hawaii: look into Macs or PC's. You're tilting at windmills here.

You'd be better off suing the guy you bought Cubase from (and mebbe the author) under the warranties of fitness under the UCC. Contrary to popular belief, apparently, the american software buyer is protected against buggy software by law. An american retailer is required by the UCC to sell wares (of any kind) that are fit and merchantable. Software is no different.

If it doesn't like your disk drive, or your dongle likes to wiggle out at bad times: find out what you are REALLY entitled to under consumer protection law and hold the vendor to it.

You should have never been put into the position where you needed to buy dongle-ware. Market tolerance in Atari-dom, apparently, is too high.

Unfortunately, Atari developers tend to blame bad sales on pirates to the exclusion of all else.

TO THE CHEERLEADERS: Enjoy the platform you helped kill.

Hi friends: You may be interested to know of a little trick I use
to connect to the Internet.

1- I use Stalker to connect to the NET (SLIP) because It will dial
up on the back ground. Stik will not do that under Geneva.

In order to use FTP or read news I first connect to the net using
the Stalker terminal and log in the regular way. After I visit
news groups and read news or do FTP I will reconnect using SLIP
by

Pressing Control and UNDO keys which under Stalker will mean
BREAK SIGNAL. This takes me to the first screen where I select
SLIP and after I get the IP number I type it on STIK.

So now I can use CAB/ANT_MAIL etc.

You may already know this, but It really helps me now
as I can use both without having to log off and on to
connect to SLIP.

I hope this helps, Raymond

PS. After you get the IP and type it to STICK you can save
the IP so that it is not erased by write protectin the file
CONFIG.SAV in the STIK_CFG folder. This way you will have to type
the last two numbers only :)

Actually, it's quite clear that it would take something on the scale of the Hindenberg disaster to defalte your ego. No wonder you and sinclap waste so much bandwdith squabbling. Neither one of you has enough experience in the Real World to know the difference between "I want" and "I need," and you're both living in the rarified atmosphere of Universities, insulated from the painful realities of life. I don't know how sincrap got that way, but Steve Hughey, you are pathetic.

>
>Sounds like a big pain.. is there another way?

Yes. Use larger partitions. On the server at home (Mega STe), I have 512
meg partitions. The small machine has only a 1.08 gig drive, and I'm using
243 meg partitions on that one.

You can do this under AHDI but only up to 1 gig total; Uwe tells me it is
limited to 1 gig. ICD utils and HDdriver handle larger hard drives without
problems.

There is an adapter that plugs into the cartridge port for use with E/IDE drives, but I don't think there exists one for the ACSI DMA port. I imagine the Germans could tell you where to find the cartridge. Also there is a French vendor listed at http://www.3rdplanet.com/~starship/atari.htm who may be able to help you.

I've never seen Foresight, but try putting "S0=2" into your init string
(that's "Ess Zero Equals Two") - perhaps Foresight doesn't send an ATA
signal at all but wants the modem to auto-answer.

That is a blatantly false statement. Roughly half of the posts on this thread have been from people giving rational explanations of /why/ software piracy is harmful to developers and to the Atari scene in general. I will not bother to quote Rod McDonald, Mark Fassset, or any of the others who have given clear precepts and reasoning; anyone interested can either read back or search Deja News.

You, however, have resorted to thinly-veiled threats of lawsuit for libel and/or slander - which you CANNOT carry out, because there is no such person as "JEDI" in the legal sense.

If you're going to bluster, try to get your bluster somewhat aligned with reality, youngster.

Ever heard about mail-fraud?

In this situation, you'd be better off QA-pirating and just sending
the retail price to the publisher. Or better yet, just buy straight
from the publisher.

Mail Order: Another nail in the coffin.

Oxymoron of the Week: Keeping Honest People Honest.

3822. RFI: Replacement for Atari Cubase Dongle-ware?

Newsgroup: comp.sys.atari.st
Date: 1996-09-03 00:00:00 UTC
From: JEDI
Message-ID: <50i3re$mld@lex.zippo.com>
Source record: 138620
Cross-posted to: comp.sys.atari.advocacy,comp.sys.mac.advocacy,comp.os.ms-windows.advocacy,comp.sys.atari.st

This is a request for information. I am curious how one would
go about replacing an Atari Falcon & Cubase sequencing setup.

There is a certain form of inconvenient, physical, copy protection
that comes with Atari Cubase: a dongle. I was wondering if it would
be possible to escape this 'inconvenience' by switching to another
plaform (PC or Mac).

Most atarians seem content with their 'inconviences'. So, they do
not go away (like they have on other platforms). So, the frustrated
atarian has few options: Take it or Leave it.

I'd like to know what would be involved in the latter.

What would the minimal functional requirements be in hardware and
software and how much would these cost?

3823. Re: Cubase 2.0 (or higher) 'cracked' version needed

>part of the contract anyway" is _still_ a violation of the law.
>

What law may that be? I'd like references to the USC if you can
manage.

Actually, the example above is not a matter of contract. It is a
matter of law under the UCC. Software vendors just don't want the
general public to know that.

Software vendors don't want to obey they law; why should we?

>Incidentally, you can copy software. All you need is the _license_ from
>the software vendor.
>
>: Given the general state of disrespect for the software consumer,
>: ensuring warranties of fitness and merchantability prior forking over
>: the cash is quite justified : ethically.
>
>I don't understand how copying software ensures "warrantees of fitness
>and merchantibility". Please explain.

You use it. Is fundemental QA so hard to understand?

>
>:
>: I also stated that obtaining versions of the software that you've bought

That is not something that I intended to imply.

>

No, just take it back for a full refund under the UCC.

>
>A Warranty of fitness and merchantability is merely the legal assurance
>tha the software/hardware performs as it is advertised. It protects the
>consumer in situations where the software release does not perform to
>specifications. It does not cover situations where the software is
>upgraded to add features.

I was not attempting to address this issue.
However, it has been current practice to release subsequent
versions of software as little more than bug-fixes.
Things tend to get murky at this point.

>
>The consumer cannot "ensure" fitness and merchantability. That is a legal
>issue, and is dealt with in the courts. If the software vendor (store) is
>not willing to accept a return of a product because it doesn't work, you
>can sue them successfully. If you steal software, you are liable, and no
>rationalization can change that.

If I use it for a month and find out that it is a buggy piece of
crap, THAT fact will be entered into any court proceedings in
excessive detail. Should a publisher deem it necessary to sue me
over QA piraty, then the failings of their product will become
public record.

BTW-the consumer can "ensure" fitness.

>
>: Furthermore, merely owning 'cracked' software only violates the authors

>: Irrelevant. This is not germane to my two current points.
>
>Not irrelevant. Any discussion of piracy from an ethical and legal
>standpoint must include this issue. If your actions affect the
>programmers, then the programmers rights must be considered.

If I am unwilling to buy the program, then my actions have no net
effect on the programmer. His ego may be bruised, and he may decide
to call all Atarians theives but, that would be the extent of it.

If the people I distribute to, are unwilling to buy the program, then
those actions have no net effect on the programmer either.

The only damage that can be done to a programmer is loss of a potential
sale. If there is no potential for a sale to begin with, then there
can be no net effect. An unlicenced copy of a program does not
automatically equate into a lost sale for the programmer.

>
>To make an important distinction: When you purchase a software package,
>you are not buying the software, you are buying the license to use the
>software. The author of the software retains ownership.
>
>As a result of this, if you distribute this software without a separate
>agreement, you are guilty of theft and breach of contract. If you own

Actually, just breach. For some strange reason, in a recent MIT
pirate sysop case, the FBI found it necessary to charge a sysop with
wire fraud. Given that the abuse of that particular law was grave
enough that even a federal judge tossed it out without a thought, it
is highly dubious that there existed a legitimate federal statute to
proscecute the sysop upon.

>software which was obtained without the license, then you are guilty of
>receiving stolen property and beng an accessory to theft.

You got some caselaw to back this claim up? Admittedly, it may
be within a proscecutors descretion. However it is not something I've
yet heard of.

Ever heard about mail-fraud?

In this situation, you'd be better off QA-pirating and just sending
the retail price to the publisher. Or better yet, just buy straight
from the publisher.

Mail Order: Another nail in the coffin.

Oxymoron of the Week: Keeping Honest People Honest.

>I have
>NO interest in your identity. My point is, you should at least have the
>guts
>to use your own name when discussing issues like ethics.

Why? You, yourself, stated that I did not touch upon ethical
issues (See above).

Why should I use my 'real' identity. It only leaves me open
to perverts and psychopaths such as yourself.

It is not functionally necessary for the task at hand.

There is nothing dishonest in a false identity when there
is full disclosure. Since even Peter could tell that JEDI
is not a real name or email address, I wasn't misleading
anyone.

Identity has nothing to do with a discussion on ethics, even
if we were having one, nor does 'guts' have anything to with
ethics.

All 'guts' has to do with is testosterone.

>

I don't believe I mentioned the dead platform thing. Can you provide
the post? I don't suppose you would, even if you could...

>
>2. I, and others, point out that piracy is unethical and wrong,
>especially when
>the software is currently available commercially. (Steinberg, although
>claiming
>there will be no additional releases of CAF, just released version
>2.06). It is
>pointed out that owning pirated software is illegal.

The law or statute stating this is so, please.

Self-serving statements by software publishers are
NOT useful sources.

>
>3. You accuse me of slander, threaten legal action, etc etc. I accuse
>you of

>cowardice and hiding behind a pseudonym.

You have a very distorted view of reality.
You also transplanted elements of one sub-thread into another.
I'm not sure, but I also think that you transplated another user's
content into mine.

You 'honest' people sure seem subsceptable to lying and dellusion.

You see the word piracy and it's like a pirrahna feeding frenzy...

I also stated that I assumed that he was a licence holder.

Pirates generally don't tend to go for 'boring' productivity
software. Steinberg thinking that they do is rather absurd.

[deletia]
>So, on to my 'justification:' Piracy is illegal, copy protection
>clearly makes

Not in my country. Would you care to cite a part of the USC that
makes non-commercial copyright infringement a crime in the US?

>piracy more difficult for the casual user, and I never claimed it serves
>to
>stop piracy.

With the exception of dongles, perhaps, copy protection is still
inneffective. Note that the Atari is the last holdout on copy
protected productivity software. That is a BIG liability.

If effective, it would at least make sense with the types of
software that tend to get the attention of most pirates: games.
However, Acopy and MSA get around those quite nicely. Those are
available to even the casual pirate making copy protection only
a nuisance to the more anal, licenced user.

THAT also is a BIG liability as the other plaforms have moved away
from that also. Users on other platforms get more utility. At the
very least, developers should make the 'nuisance' worth our while.

If they can't, then that really indicates how few sales that the
copy protection is saving.

>
>I say, let those who work to create a product earn money from the
>product.

This is a nice, self-serving statement, but it does nothing to
address my points.

All you did was to attempt to justify the slander that you claim
I don't understand.

Oxymoron of the Week: Keeping Honest People Honest.

Child, there are LEGAL definitions of those terms. In no way was
anything
I said even REMOTELY libelous or slanderous. If you really think so,
you have even less common sense then I originally thought.

> Why should I use my 'real' identity. It only leaves me open
> to perverts and psychopaths such as yourself.

Now THAT'S the closest any of us have come to slander.

Yea, all them perverts and psychopaths are all out to get ya..
they'll put a hex on you via e-mail!

The only reason you have a pseudonym is so you can be more obnoxious
then you would in person without fear of retribution. I think it's
cowardly to post an insult to someone on a BB that you wouldn't
have the guts to say to their face. By not using your real name,
you are, in effect, doing that.

> There is nothing dishonest in a false identity when there

>
> All 'guts' has to do with is testosterone.

Again, it removes responsibility from your posts. You can post
without fear of retribution when you cross the line, as you did
earlier referring to be as a 'psycopath' and/or 'pervert.'

It's cowardice to hide behind a pseudonym. If you really have the
strong enough convictions to post here, you should have a strong
enough personality to stand behind your comments.

> I don't believe I mentioned the dead platform thing. Can you provide
> the post? I don't suppose you would, even if you could...

Child, I believed it was you, but if I'm incorrect, I retract the
allegation. It's not worth my time to reread your posts.

>
> The law or statute stating this is so, please.

Again, the legal statutes exist.. I'm not going to do your
homework for you.

> Pirates generally don't tend to go for 'boring' productivity
> software. Steinberg thinking that they do is rather absurd.

If they don't, why is someone asking for cracked Cubase copies?
Obviously, there is a market.

> Not in my country. Would you care to cite a part of the USC that
> makes non-commercial copyright infringement a crime in the US?

Do your own homework.

> With the exception of dongles, perhaps, copy protection is still
> inneffective. Note that the Atari is the last holdout on copy
> protected productivity software. That is a BIG liability.

Liability my ass. The Atari market is shrinking. How is it a
liability?

> If effective, it would at least make sense with the types of

> very least, developers should make the 'nuisance' worth our while.

You are displaying your ignorance of other platforms. Your comments might be true of the PC, but Pro Tools, Waves and others plugins, Cubase and other sequencers, etc., still have copy protection. 3D Studio still requires a parallel port dongle on the PC.

You seem to have a very large knowledge of ways to get around copy protection.. hmmm...

> If they can't, then that really indicates how few sales that the
> copy protection is saving.

I don't think anyone believes it saves tons of sales. I think it might help incrementally. That's good enough for Atari programmers who don't exactly move Win95 numbers.

> >I say, let those who work to create a product earn money from the

: Let's put this in a different perspective. I buy a new car. A month
: later, the manufacturer comes out with a new model which is substantially
: the same, but has enhanced safety features, like airbags and ABS brakes.

: By your argument, I am ethically and legally justified in stealing the
: new car because of "fit and merchantability". I don't think a judge would
: agree with you.

In my experience, this is not an accurate analogy. There are two
situations that I have dealt with most recently.

1. Software product that was severely buggy and therefore defective.

If you buy a car that has severe and persistant malfunctions and defects
the model is either recalled, or your purchase is covered by "lemon" laws,
and you are entitled to a new car from the dealership or manufacturer.
you don't have to pay for an upgrade just to get the car functioning the
way that it was intended to when you agreed to the purchase.

2. Software product which fails to function consistently due to copy
protection schemes.

If you buy a car and later find that the key only starts the car about 70%
of the time, you can bet that it wouldn't be tolerated. Lets say it is
monday morning and you have a big meeting - OOOPS! The key doesn't work
today; guess you can't use your car.

Never have I seen any software packaging that indicated the copy
protection scheme employed; nor the likelihood that this scheme might
fail; nor the chances that this scheme might interfere with other
computing functions. This information would certainly affect the decision
to purchase on the part of the consumer.

I spent $600.00 on Cubase, and another $600.00 on Notator - both programs
have resulted in the loss of my time and work SOLELY because of their copy
protection/dongles. Frequently, for no apparent reason, these programs
will fail to recognize their dongles and either fail to boot or lock-up.
These were not conditions that I agreed to.

I also spent a couple hundred on Chronos 3-D, which employs a RS232 port
dongle that just so happens to interfere with RS232 operation. This means

that I must swap cables every time I want to use the modem or Chronos.

Software makers need to take into account the fact that people don't buy computers for JUST ONE PROGRAM! They also need to be mindful of what harm their anti-piracy measure may be causing their consumers. Software publishers must be willing accept the possibility that these measures DO discourage consumers from purchasing their products. I personally know of several people what refuse to purchase dongle-protected software for the reasons previously mention, and I am certain that this represents a segment of the consumer population.

It is not reasonable to assume that the consumer will pay so much, only to have to put up with so much nonsense.

: Not irrelevant. Any discussion of piracy from an ethical and legal
: standpoint must include this issue. If your actions affect the
: programmers, then the programmers rights must be considered.

Where are the rights of the consumer protected?

Magic 4 single-tasks when set up under the Install Application feature of
MagxDesk (don't know about Ease) or can be switched to co-operative
multitasking using the TSLICE.CPX.

FWIW on a Mega STe I have no problem with STiK in any of the three modes...

J > You should have never been put into the position where you
J > needed to buy dongle-ware. Market tolerance in Atari-dom,
J > apparently, is too high. Unfortunately, Atari developers tend
J > to blame bad sales on pirates to the exclusion of all else.

I'll just stay out of the 'pirate wars' here, as no one seems to be listening to anyone else on that.

However, I agree with this one paragraph. I'll include Mac & Windows software, too, though. I'm tired of the poor service & buggy software & hardware one gets. Despite a few shining stars, I'm quite offened by the very, very poor 'service' one gets from the computer world. I've heard carping from software vendors for long enough. Write working software, damnit. I'm tired of the crap I get.

There. That ought to send a lot of flames my way. :) Oh well.

But, version one of anything never works. Version two works, but doesn't implement the features I bought the program for. Version three (promised to work, and have all the features...) never is released, because the developer is disappointed with the sales, and doesn't want to bother releasing any more software for the complaining masses...

I've heard that story over & over & over... Developers have a pretty good outlet for their gripes through the computer media. Well, hey, developers -> We don't have the mass media available to us, but how about _listening_ to the complaining masses??? Maybe we'd buy your software if the crap would _work_ for a change?

Now, I'll get flamed a lot. I understand that. I'll point out, I'm upset with _commercial_ software developers, for _all_ platforms. This means there are _very_ few Atari folks I'm addressing this to. :) And of those, I _do_ understand about the mico-market Atari is, and why developers are leaving this arena. :)

Dongles are a bad idea. Heavy disk protection is a bad idea. Releasing buggy software is a bad idea. Promising features for software that isn't even half way up to snuff is a bad idea.

Ok, devolopers. That's my gripe list. I've spent years reading about your gripes in the computer media. Unfortunately, those of you who will pause to refelct upon my words, are the ones who already are heeding them. :)

>Atari LAN and are there drivers for networking Ataris under Linux?

Yes, the MSTe/TT/Falcon LAN port is the same as a LocalTalk port.

Has anyone written an AppleTalk driver for any Atari platform? Not that
I've heard of. Way back in the mists of time, I tried this sort of thing
on a Sun 3/50 (which also happens to have the same Zilog 8530 SCC that
Apple originally used for LocalTalk, and which the abovementioned Ataris
have...). Aside from getting the clock speed right, there's the issue of
handling 23000 character interrupts per second. (The solution is obvious
though - once the first interrupt hits, poll until the end of packet...)

Anyone with some spare time and a copy of Inside Appletalk, and familiarity
with communications programming in general could probably knock it off.
Right now I lack the spare time... Also I probably could not release such
a thing without getting the company lawyers suspicious about theft of
intellectual property, since I currently work on an Appletalk product
for Unix... (PC-Interface for Macintosh).

If you think this is too big a project, remember - the original protocol
suite ran in a Mac with only 128K of RAM. The MSTe/TT/Falcon are all at
least 16 times more capable machines, and the total code we're talking here
can't be much more than 30K...

Uh, guys? I may have missed it, but...

A) he asked for a joy_stick_, not a joy_pad_ (ugh, hate the things!)

and

B) he said _quality_! :^)

Like I said, I can't _stand_ joy pads!

Personally, I prefer the Epyx/Konix 500XJ, if you can still find one. Unfortunately,
I think they cost some 15 pounds new and I don't know who in the UK might have them.

Actually, I would guess that if you are going to fax the .IMG, you should set
driver 91 to:

91 IMG_0200.SYS

and thereby get a 200 dpi image for StraightFax. Matter of fact, I may try it
for the heck of it (I fax from Cal SL).

Check the TOS version, and use some kind of parallel process that isn't visible to slow the program down when TOS 3+ is found. The Falcon is about 6 times as fast as an ST, the TT about 12 times.

Taa-daa!

Dan ;^)

Well, I sure must want to bring the whole i-net world down upon me today, with the topics I'm entering! :) Isn't this really software piracy? I just got done reading a whole lot about the evils of computer software piracy (I agree, for the record).

Now, isn't this a whole archive of digitally copied music? Perhaps I've missed the laws covering this. (Perhaps? Hell, I _know_ I've missed them!!! I'm just a simple dirt farmer... :) But, isn't a mod file of Bon Jovi piracy too?

Now if we can get them to release the code for Doom, then get it to link to PCs...

Do you write shareware or commercial software (other than for companies like Interplay)? As far as Interplay goes, they'll probably never publish it, but maybe you could work up an agreement where you could do a low-budget release and give them a cut. That way they spend no money and you both get a little out of it.

It's pretty damned easy to guess. Even Petey Boy probably figured it out.

I> We don't need your brainwashed fascist asses to protect our liberties.

Excellent. Glad to know you consider me a fascist. At least it explains some of your general attitude. Of course, I am absolutely sure you get up at 4:30 every morning and get home after a hard (physically - as in hot, sweaty, dirty labor) day's work at & PM (on a good night), make about 750f the going rate for people with similar technical qualifications in the civilian market, get to retire with lots of promises but damn near no actual follow-through (and BTW, you might tell Petey-Boy to do some research on that subject if the thought crosses your mind, he doesn't know squat on /that/ subject, either)... Well, anyhow.

I> In fact, idiots like you threaten them. "...get back to the front..."

Pardon me, but in case you haven't noticed, all of the US military is volunteers - and has been for over fifteen years. If you don't want to grow up, you don't have to. If you don't want to serve a little time in your country's service, you don't have to. You don't have to talk to me, either. Strangely, I doubt that either of us will suffer very much if you don't.

I> Merely being a mercenary is NOT standing up for ANYone's rights.

If I had been a mercenary, I wouldn't be still working for my bread and butter - mercs make LOTS of money. You claim to know a great deal about the law; you don't know shit about military matters, and that's a fact.

I> ...and you are pompous. You assume much too much about me without
I> any reason. Then you use these assumptions to prop your own
I> miniscule ego up.

I assume nothing that is not apparent from your posts. I might add that I don't recall calling you any names based on your politcal leanings (even if I knew them, they aren't germaine to this discussion - although I am pretty sure it was either you or sinclap who signed my yup to the marxist-leninist mailing list).

Perhaps I am pompous. I'm admittedly even a little arrogant. I have years of accomplishments that I can point to (which don't involve borrowing a

floppy from a friend and making an unlicensed copy of it), so perhaps I have some small reason to feel a sense of pride in what I have done.

>> reading anything in the Constitution, nor in the Amendments to same,
>> about "the right to steal the fruit of programmers' hard work and use it
>> without
I>
I> As always, you 'moral' types need to LIE to make a point.
I> I never defended the pirate's right to pirate.

I disagree. You must have a very short memory. Or perhaps we interpret what you have said differently. Are you now saying that piracy is unethical?

I> Since you admittedly never paid any attention to the post in
I> question, you have no real substantive things to say in the matter.

Your straw man is a deliberate non sequitur. /You/ say I didn't pay attention to the original post; I say I not only paid attention, I replied point-by-point with reasoned argument, ad nwas met with ad hominem attacks. Those tactics may work in the courtroom; they don't work with /thinking/ people.

I> The man was accused of commerical copyright infringement. This is
I> distinct from 'normal piracy'. This distinction is made by both the
I> law and the pirates themselves.

Define 'normal piracy,' then, if you will. I don't believe there /is/ a legal definition of 'normal piracy.' And, the man was not /accused/ of criminal copyright infringement; it was stated that he /might/ be a pirate, along with 2 other explicit possible explanations. /You/ seized on the piracy issue (as you do on a regular basis, EVERY time the subject comes up.) At this point, poor Mark probably wonders himself what he actually said; I can reprint it here, if necessary, but the gist of it was that he wanted to knwo where to find "cracked Atari software." He neglected to state in his first message that he owned a licensed Cubase copy and wanted a dongle-free version. I and others took offense when he posted private email in public (non-flaming, email, I might add - you can't obfusticate this issue). ONLY after it was said that asking for cracked software was asking for flames, did he clarify (or backpedal - it's a POV issue, after all).

I> If you stopped being pompous for a moment, and learned a little about
I> those you want to blindly lash out at, you might gain some real
I> understanding. You might actually come up with some decent arguements
I> too. Although, I'd imagine that you would consider that futile. ALL
I> you can do is blindly demonize. Like the original person I flamed, you
I> seem to think that one 'immoral' act implies them all.

Hardly - although in the Judeo-Christian culture, guilty of one /is/ guilty of all. Ask a Rabbi or Priest if you doubt that.

As for decent arguments, if you are studying law, which appears to be the case, I suggest that you have concentrated on finding emotional buttons to push and neglected rigorous logical argument. Here are several "decent"

arguments that you have conveniently ignored:

(1) If someone is incapable of cracking Cubase himself and really wants to run Cubase, he will either buy it, or not use it at all. Thus, there is a roughyl even chance (all other things being equal) that a pirated copy falling into his hands will result in a lost sale.

(2) Every cracked copy of copyrighted (and copy-protected) software in circulation eventually comes to the attention of the legitimate copyright holder. Given enough incidents of this type, an intelligent man who writes his programs for money (commercial or shareware) will leave the Atari platform and program for the PC, where even a piece of absolute crap is gauranteed sales of at least ten thousand copies if it has pretty pictures and good distribution.

I> Sorry: the universe isn't that simple. If you'd spent less time being
I> a Terminator for the state, you might be able to parse it [universe].

Universe: The totality of all things that exist. The cosmos. The world.

That includes me, you, my kids and grandkids, Bill Gates, and the concepts of "right" and "wrong," which seem to mean different things to you and to me.

And obviously you don't know shit about what I did in the military, other than get shot at.

I> You can't stand the implication that there might be positive aspects
I> of the scum you like to rag on so much.

No one - not even Adolf Hilter or Josef Stalin - is ever wholly evil or wholly good (and quote me no saints - their "goodness" is based on their adherence to a moral code that is predicated on fear, just as obeying the law is for most people). /You/ have insisted that I and the other proponents of supporting /legal/ copyrights are pompous moralists with a black-and-white view of the world. You are also perfectly well aware that we are no more or less narrow-minded that you are; but for the purposes of this discussion, you have chosen to make personal attacks because you know quite well that "piracy is the same as shareware" is not only specious, it's a silly position when analyzed rationally.

I> This subject is not as binary as you'd like to think it is.

Kindly show me where theft shades into legal ownership and I'll agree with you.

I> As always, the only way that you can make a point is to LIE.

You fail to point out the lie. Calling me a liar does not make it so; calling me Jane Fonda won't make me an actress, either.

I> Peter Sinclair-Day lies less than you do. Next to you, he seems
I> positively sensible.

Actually, Peter probably believes what he says; this does not qualify as lying, but simply ignorance (willful ignorance, I think, but there is a

difference between knowing the truth and denying it, and simply refusing to recognize it). That doesn't make him reasonable; nor does your comparing him to me make us similar.

>> Actually, that is probably quite a revealing remark to those who are
>> aware of your history as a pirate. It's not inaccurate, of course -
>> locks (and copy protection) only keep honest people honest, and in most
>> cases, are easily
I>
I> Keeping honest people honest? Now THAT's an OXYMORON!
I> IF you were so morally superior, you wouldn't need the help!

Moral superiority doesn't keep burglars out of an unlocked house. Any /idiot/ can recognize that fact. And people who are normally honest will often steal when they feel they stand no chance of being caught, and when they don't think the person or business they are stealign from will be hurt; that's been a long-established fact in psychology (readily available for you to look up in the University library, I'm sure). Your argument that "piracy doesn't hurt anyone" is rationalizing theft so you won't feel guilty. Rationalizing your culpability doesn't make it legal, and doesn't ameliorate the harm you do to software developers.

I> This is one aspect of Atari-dom which is yet another hurdle.
I> This is one aspect of Atari-dom that the 'others' don't have
I> to put up with.

There are very few commercial programs still in production for the Atari, as you well know; other than Cubase, I know of no other currently-porduced copy-protected software (that doesn't mean it doesn't exists, but that it's fairly obscure).

The copy protection on Cubase is a nuisance, yes; it's also reasonable, although the hardware solution they selected has faults as all such copy-protection always does. The fact that, every month or so, someone asks for a cracked copy of Cubaseshows that /their copy protection works./ Otherwise, no one would bother to ask. And you have repeatedly stated that copy protection only pretects the software from copying by the clueless; therefor, by your own arguments, most Cubase users are clueless. /I/ would say that they are more interested in music than in programming.

I> Suggestion to the bloke from Hawaii: if you can't do sequencing
I> without dongles on the Atari: DUMP IT, if you can. Consumers
I> only hurt themselves whenever they tolerate that which they can
I> avoid somewhere else in the marketplace.

That is actually good advice. Helping him select that software would be even better.

I> A suggestion to Peter: suggest an alternative to a Falcon+Cubase
I> for the Mac. Try to come up with a usable solution for the lowest
I> possible cost. Don't necessarily recommend the newest most expensive
I> hardware if the task can be done in a satisfactory manner on the cheap.

A note of caution here; Peter, seriously consider contacting the original fellow in email. Using a university account for commercial purposes violates the non-profit charter of the University and puts both that charter and your account in jeopardy. We have already seen you state that you sell Macs to supplement your income; your continuing advocacy of the Mac endangers your University when you post from that account. This is /not/ to be construed as a threat; it is simple fact (I won't act on it, if that gives you any comfort, but I can't speak for anyone else you have annoyed over the past 2 1/2 years).

>> Perhaps. Or perhaps you are deliberately distorting my position so as
>> to make yourself look (to the ignorant and naive) like an honest
>> citizen.
I>
I> What have I distorted? (patented VENOM)

Well, let's see, you've called me brainwashed, a fascist, a "Terminator" (considering that Arnie played both an "evil" and a "good" Terminator, I'm not sure that counts, but I am sure you intended it as an insult), an idiot, a liar, a hypocrite... Actually, you have portrayed me as somewhat less evil than Hitler, but no much less. Yet you call my statements that "pracy is theft" distortions? Strange.

I> On the other hand, I have pointed out your distortions.
I> That is what started this whole bit actually.

There's where we differ. You call them distortions. I call them facts. The dictionary here agress with me. It's Webster's New World Dictionary.

>> >> - there's someone who openly espouses piracy. ...
>> R>
>> R> Under a very limited set of circumstances mind you. You
>> R> conveniently neglect that part.

You neglected to define those circumstances at the time.

>> /thinking/ people, however. You talk like a lawyer (that's intended as
>> an insult) - willing to argue any position with equal venom, er, vigor,
>> as long as there's a profit in it for you.
I>
I> Your assertion is not consistent with the available evidence.

The "available evidence" is that you are Steve Hughey (that may be spelled incorrectly) who profits from commercial copyrighted software, "Ratsoft BBS," who maintained a piracy-oriented BBS for some time in the Los Angeles area, who was the cause of a respected citizen changing his telephone number for releif from your harrassing phone calls after he objected to your pirate activities... In short, Sir, you are a hypocrite of the first stripe, taking money for software and decrying others who wish to also profit from their programming.

>> You back-peddle very well, by the way. Anyone who came into this
>> conversation late and was unaware that Deja News allows them to read
>> the entire thread would think you were being unreasonably attacked.

I>
I> Anyone with DejaNews could see that a pirate was accused
I> of activity that is not normally associated with pirates
I> solely because some SPA wannabe couldn't handle the possibility
I> of someone being a pirate and actually being a better software
I> customer [than an SPA wannabe].

I am afraid that most people who can add and subtract are able to see that distributing software which has not been licensed is likely to result in loss of sales. How, pray tell, can causing lost sales make a "better software customer?"

I> If they would wish to discount my ideas solely becuase of
I> my political views, that is another matter.

No one even /knew/ your political views before you brought them into the discussion, certainly not at the beginning of the thread.

I> Hopefully, they would be more honest to themselves and to others
I> about their biases.

I have arrived at my current set of biases through experience, not by worshipping at the feet of some ivory-tower pseudo-Marxist. You haven't had the time to collect your own set of biases yet.

The version of GS on the Atari Compendium CD complains bitterly when I
try to get it to read the .PDF files of the book. Anyone manage to get it to
work ?

Or get MintNet up and running. STiK doesn't work well unless your provider
has hard-coded your account to SLIP. My provider detects whether you're
using SLIP or CSLIP, and adjusts accordingly. Unfortunately, STiK is giving
it a false impression. And I didn't know this 'til I paid my yearly fee.

In the US, you always have the right to make copies of something that you have purchased for your own private use. The courts have upheld this, and therefore it is not within the license to keep you from making backups. Now, copy protection may do that, and then that might actually be illegal, since it inhibits you from performing a legally-protected action with the item you have purchased.

Have fun! - Bob

They cost /you/ nothing. Are you under the mistaken impression that /no one/ pays for your internet access? Your University is subsidized by taxes, and by a tax-free status. The University's access is paid for by taxes.

By maintaining multiple accounts (if you, that is something you have left a bit muddled), you would be stealing from the people who pay to keep you in school.

And please don't try to tell me that your tuition covers all of the University's costs to keep you there. Anyone who has ever asked the admin staff what it costs to keep a student knows better.

STiK chokes on most JPEG's. All you can do is keep hitting the escape
key until the page is loaded. You'll soon find that some pages are
unusable. If you're really unlucky, your provider's pages will be some
of them.

3873. Linux on Falcon

Newsgroup: comp.sys.atari.st
Date: 1996-09-03 00:00:00 UTC
From: comezana@math.psu.edu
Message-ID: <50gjjn$hlg@dodgson.math.psu.edu>
Source record: 138714

Hi!
I have a Falcon with 14 Mb and FPU installed, and I'm trying to summon the courage to install Linux. As it seems to be a nontrivial task, I would like to hear opinions pro and con before I take the plunge. For example, I have read on this newsgroup that it is very slow, yet another poster later blamed it on the FPU emulation. So, what's the story? Of course, slow is a rather relative term, so for purposes of evaluation, I'd like to hear how X on Linux compares with my currently favorite setup, consisting of AES 4.1 + NVDI (which in 256 color hi-res overscan mode is a little bit sluggish, but not much of an irritation) and with X on MiNT (now *that* is slow!). While comments based on results obtained with accelerated machines (or on TTs) are welcome, I'm more interested in hearing about performance on a garden variety 16 MHz FPUed Falcon (at the moment I am in no financial condition to spend on hardware). Thanks in advance.

Gustavo

3875. VIDI ST, how to access from software

Newsgroup: comp.sys.atari.st
Date: 1996-09-03 00:00:00 UTC
From: mbecroft@tos.ak.planet.gen.nz
Message-ID: <GIDKAAUSUp@tos.ak.planet.gen.nz>
Source record: 138716
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I have a VIDI ST video digitiser (with the colour splitter box), but I find that the supplied software is far from satisfactory - the main problem being that it will not work on anything other than the standard ST(e) (at least no for me).

I would like to write my own software for VIDI-ST, but I am unsure of how to read data from the VIDI cartridge.

Hopefully someone has figured this out and may be able to help by explaining it to me.

Alternatively, maybe someone has an email address for Rombo, the company which developed VIDI ST. I am not referring to VIDI 12, BTW, just the standard VIDI.

Thanks for any suggestions/advice/help.

3878. GlueSTiK problem: no data received - please help.

Newsgroup: comp.sys.atari.st
Date: 1996-09-03 00:00:00 UTC
From: mbecroft@tos.ak.planet.gen.nz
Message-ID: <GIDTEFUQUp@tos.ak.planet.gen.nz>
Source record: 138719

I have just found GlueSTiK on the author's WWW page.

Having downloaded it and installed it, I now need some help since it is not working correctly. This is probably because I have done something wrong, I guess.

I have installed as per the instructions, and when it is executed from my mint.cnf I get a normal looking message (two messages, one from a driver and one from a daemon, I believe). So far things looked fairly normal.

Next, I ran the telnet program that came with the WWW131 package, and attempted to connect to "localhost". It said that it had connected, but I got not "login" prompt as I normally would. I tried connecting to "http://localhost/" with CAB (I have NCSA HTTPd running) but I just got "receiving data 0 bytes" going on forever until I pressed escape. I then got a blank display. Using Lynx or the CAB for MiNTNet overlay, I get a WWW page as expected.

I tried "finger" from the WWW131 package, but it just crashed with a bus error immediately after I executed it.

I can do all of the above things fine with MiNTNet, but trying to do them with STiK programs via GlueSTiK does not seem to work. I have not tried STiK itself.

I would like to get GlueSTiK working, since I have heard that using CAB via GlueSTiK works better than using CAB with the CAB-for-MiNTNet overlay.

Actually, the only problem I have found with the CAB-for-MiNTNet overlay is that the escape key has no effect on aborting it. This can be a real nuisance at times, and I was hoping that GlueSTiK with the CAB for STiK overlay would solve this.

Any help on either of these problems would be much appreciated.

Thor, I'm one of FS's US beta sites, nice to know it's ALMOST running elsewhere in the world. I'm not familiar with your modem at all, but I just use a generic ATZ~ command, it should work fine with PC Factory defaults (AT&F). I seem to remember for some reason around the v0.43 mark my modem wouldn't answer the phone either... I think internal handling of auto-answer was tweaked, try it with ATS0=0 in your config file.

> I really would love some help in this direction and also if anyone knows
> of a site where I can grab some doors for this BBS..

...I'm in the process of setting one up on my BBS's homepage, although I'm not very far along. I also attempted setting up a ST-Door FAQ to list ST DOORs, man is it hard to trace the whereabouts of people long since gone! I could email you copies of the couple of doors I've completed so far if you want...

BTW, the author stops in here once in a while, so he'll probably spot your msg and be more help than I <grin>.

Good Luck - Andy

Linux is not slow. There is an fpu emulation witch is slow compared to a
real FPU, but I did't expect it to be faster than the original ;-)

> purposes of evaluation, I'd like to hear how X on Linux compares

Well, Linux is definately faster than that. About the X Server I really
don't know. I don't have enough RAM to use X on any Platform (not even
on MiNT).

From the Holy Book of <GIDTEFUQUp@tos.ak.planet.gen.nz>
as spake by mbecroft@tos.ak.planet.gen.nz (Mario Becroft) :

>Next, I ran the telnet program that came with the WWW131 package, and
>attempted to connect to "localhost". It said that it had connected,
>but I got not "login" prompt as I normally would.

Hmm. Did you see a few characters of what looked like garbage? Jim's
STiK telnet app doesn't appear to support telnet option negotiation,
which can produce the effect you observe if the telnet daemon at the
other end tries to initiate a negotiation. I ran into that problem too;
eventually I had to telnet to port 80 of a local web server to test it.

> I tried connecting
>to "http://localhost/" with CAB (I have NCSA HTTPd running) but I just got
>"receiving data 0 bytes" going on forever until I pressed escape. I then got
>a blank display. Using Lynx or the CAB for MiNTNet overlay, I get a WWW page
>as expected.

I've seen reports of problems like this happening with normal STiK as
well --- can anyone remind us of the results of that discussion? Beyond
that, what did your httpd logs report?

>I tried "finger" from the WWW131 package, but it just crashed with a bus
>error immediately after I executed it.

If it didn't even get as far as the main dialog, then it's probably not
a GlueSTiK error. The finger app uses the STiK variables NAMESERVER and
USERNAME, and may not behave sensibly if those are absent; try setting
those to something non-empty in DEFAULT.CFG.

>---
>
>I can do all of the above things fine with MiNTNet, but trying to do them
>with STiK programs via GlueSTiK does not seem to work. I have not tried
>STiK itself.

That would be my first suggestion, if you can. That's the only sure way
to determine whether the problem is in the app or in GlueSTiK.

>Actually, the only problem I have found with the CAB-for-MiNTNet overlay is
>that the escape key has no effect on aborting it. This can be a real nuisance
>at times, and I was hoping that GlueSTiK with the CAB for STiK overlay
>would solve this.

That depends on where in the STiK/CAB.OVL/CAB chain the ESC handling
occurs. GlueSTiK doesn't do any ESC processing, because it can't,

really; if it did, typing ESC in any running program would stop a
download in progress, which would be disastrous if you were running,
say, vi or emacs in another window. [Hmm, I wonder if STiK has that
problem...]

I recommend FONTZ by Michtron (extinct, but still available second hand
occasionally). It allowed me to fathom the unfathommable GDOS, and design
one font, just before I switched to Calamus, and left GDOS fonts behind.

Yes, and it's free! You need GhostScript. I have successfully used
this to preview PageStream PS files on screen and on a DeskJet printer.

The main tip to remember is that GhostScript, being free, does not come
with quality fonts. Therefore, you should embed the fonts in your PS
output from PageStream.

Ok, let me try to be more thorough than I have been (see if it helps out).

The Iomega JAZ 'leaflets' indicate this SCSI device to be smart when it comes to the termination power needs. In reality, the package comes with a somewhat specialized cable which is intended for 1 SCSI device and has a termination block at the end. Since I have not used that cable, but plugged this into a 4-bay unit (half empty now) I presume termination is not a problem. My actual SCSI path from my Falcon is first to the Syquest (in it's own case) id #0, then to the 4-bay case (JAZ #1 and Toshiba CDROM #2), then to an EPSON flatbed scanner #4.

The IDCHECK program app on the HDDriver disk shows all of these when run.

What concerns me is that the JAZ paperwork also has a comment that is has "auto termination". It goes on to say that the JAZ will sense its position in the SCSI chain and provide termination if it finds itself at the end of the line. I don't know if this is related here in my situation or not. But since this is a hardware issue, I thought I'd mention it here.

Someone else mentioned looking for a s/w utility called ICD2AHDI. I cannot locate that, if the reference was to find it on the HD Driver disk.

When I run the HDUTIL app, it doesn't appear to see the JAZ id. (Although it shows the #0 id -Syquest. Nothing further as I would have expected to see a list somewhat.)

At the moment, this is all I can tell you. Although I will get & try the latest HDRIVER demo (all by itslef) to see what that does. BTW, the version I have purchased is 5.12, JIC (just in case).

3892. Re: Cubase 2.0 (or higher) 'cracked' version needed

rwithoff@winternet.com barked in COMP.SYS.ATARI.ST on 03 Sep 96:

r> Newsgroups: comp.sys.atari.st
r> From: rwithoff@winternet.com (Magic Marmot Studios)
r>
r> ... if you own Cubase 4.21 (the dongle version), and you have a cracked
r> version, then you can use the cracked version to your heart's content (as
r> long as backup copies are allowed by the software license agreement).

The making of backup copies is permitted by law, according to precedent in US court, at least; any software license which doesn't permit making "archival copies" is exceeding the software publisher's right to limit use ("fair use" includes the right to protect oneself from media failure).

Making backup copies is not illegal; distributing them to others who do not own a license to the software is, however.

r> As a result of this, if you distribute this software without a separate
r> agreement, you are guilty of theft and breach of contract. If you own
r> software which was obtained without the license, then you are guilty of
r> receiving stolen property and beng an accessory to theft.

And in many states of the US, if you discussed the subject beforehand, and planned to make the copies, it becomes conspiracy, a much more serious crime.

Typical cold war mentality to justify your 23 years on the gov't welfare dol...What a racket that you can retire after 20 years regardless of age to recieve a pension with free/subsidized medical care for life and as a nation we can't provide for our children. No sir, we would not need to learn Russian and Chinese unless you want to(my bro speakes the Chinese language). The whole cold war mentality was a farce....

There is an "Extension" (set of commands) you add on to STOS that allows you to use VIDIST, Never tried it myself and don't know which version it works with but it allows screen grabbing in various modes and a few other things, a few commands?

I can send you the extensions that are not written in STOS of course:), these can probably be decompiled?, plus the doc files that may give some author info,

Cant tell you mutch more as I have never used it, but have it in my extensions collection,

Cheers.............!ynoT

3896. Oasis 1.35 and Geneva

Newsgroup: comp.sys.atari.st
Date: 1996-09-03 00:00:00 UTC
From: gary@imco.demon.co.uk
Message-ID: <841855136_OASIS_@imco.demon.co.uk>
Source record: 138737

Is Oasis 1.35 compatable with Geneva 1.02? I've just tried running the one with the other and found that I cannot highlight any text in the Oasis windows, this sort of renders Oasis a bit useless. Can this be fixed by fiddling with the flags or am I just wasting my time? Does anybody use Geneva with any success?

Ta, Gaz.

Sounds like the jpeg problem. Does it go away with graphics off?
There's not a lot you can do about this atm, except hit escape.

.. unlike the news server which would not let me connect last night
to say this is wrong! Not satisifed with saying in the docs I'd never
upgrade it then uploading 1.1, I proceeded to upload 1.2 so ...

Bit more than minor update to SDUU on my pages below. Blah - same as
above. Also, SDUU can be made to automatically invoke a Tos Zip and
Lzh dearchiver so one click on a folder full of uu-encoded files can
result in a folder full of subdirectories containing the original
packages.

agh - the kitten's got its head in my teacup _again_. It's going to be
one of those days!

It works fine for me as a Cab external, except when I accidently set
more than one off then it complains with a text message. Possibly I
need parallel sound chips? ;-)

Its the well known JPEG bug, The CAB version included in WWW131 have
problems with some JPEG pictures. When it stops you have to press ESC to get
past that JPEG picture.. Its cured in later betaversions. And it will
be cured in the next release.

If you mean the ones from the 8-bit Master System then they might work.
I tried the Genesis(Mega Drive) ones and the ST chokes on them because
the joystick port doesn't take to well to certain signels sent on the
pins made for paddles. Just who were the idiots who designed the ST
joystick ports? :)

> R> pundits do, despite your pomposity.
>
>Really? Somehow I fail to see how pomposity relates to knowing what
>constitutes theft and what does not. Let's try this: Assume I am running

The operative word here is LAW. You talk about law, not THEFT, nor even
morality. You know nothing of the LAW. Yet you like to preach about it.

As always, I encourage EVERYONE to look into this for themselves. I also
suggest reading up on the Uniform Commerical Code as it applies to consumer
protection and software. You may find recourse for your own software gripes.

>Ratsoft. Assume I have not bought it, but rather that I have cracked it.
Actually, cracking it usually implies that you bought it.
It had to come from somewhere. It did not just magically
appear on those disks...
>According to my definition, I have stolen it. According to yours, I'm "just
>trying it out" or some such mealy-mouthed phrase.

You are breaking copyright, that is ALL. You are not yet committing any
crime: not even a misdemeanor. Check out the law and caselaw for yourself.
Any videotape has the relevant parts of the USC in it's little 'notice'.

If you discover that the program is complete trash, then you have
saved yourself the trouble of dealing with merchants that have no repect
for you and will LIE to you to attempt to keep you from knowing about, or
exercising your consumer rights. I refer to the now common disclaimer in
software stores stating that they cannot take returns on opened software
because of copyright law. This is a rather bogus lie. I also encourage
EVERYONE here to debunk this one for themselves as well.

If you find it usable and merchantable and then not yet buy it, than
you have broken the limited conditions under which I stated that unlicenced
software use is ethical.

Your objection is a non-sequitor red herring.

We don't need your brainwashed fascist asses to protect our liberties.
In fact, idiots like you threaten them. "...get back to the front..."

Merely being a mercenary is NOT standing up for ANYone's rights.

...and you are pompous. You assume much too much about me without
any reason. Then you use these assumptions to prop your own
miniscule ego up.

>reading anything in the Constitution, nor in the Amendments to same, about
>"the right to steal the fruit of programmers' hard work and use it without

As always, you 'moral' types need to LIE to make a point.
I never defended the pirate's right to pirate.
Since you admittedly never paid any attention to the post in

question, you have no real substantive things to say in the matter.

The man was accused of commerical copyright infringement. This is
distinct from 'normal piracy'. This distinction is made by both the
law and the pirates themselves.

If you stopped being pompous for a moment, and learned a little about
those you want to blindly lash out at, you might gain some real
understanding. You might actually come up with some decent arguements
too. Although, I'd imagine that you would consider that futile. ALL you
can do is blindly demonize. Like the original person I flamed, you seem
to think that one 'immoral' act implies them all.

Sorry: the universe isn't that simple. If you'd spent less time being
a Terminator for the state, you might be able to parse it [universe].

You can't stand the implication that there might be positive aspects
of the scum you like to rag on so much.

This subject is not as binary as you'd like to think it is.

>paying for it." Perhaps you would care to enlighten the rest of us as to the
>exact location of that guarantee?

As always, the only way that you can make a point is to LIE.
Peter Sinclair-Day lies less than you do. Next to you, he seems
positively sensible.

>
> R> Yes, how DARE I state the folly of copy protection that has never
> R> stopped any pirate I know of.
>
>Actually, that is probably quite a revealing remark to those who are aware of
>your history as a pirate. It's not inaccurate, of course - locks (and copy
>protection) only keep honest people honest, and in most cases, are easily

Keeping honest people honest? Now THAT's an OXYMORON!
IF you were so morally superior, you wouldn't need the help!

>foiled. In point of fact, I make a practice of making copies of
>copy-protected software - for myself; so I don't have to buy a new copy
>(which might be hard to find) when the original wears out, and for anyone who
>did buy the original, which /has/ worn out. That, however, isn't piracy -the
>law calls it "fair use" as you well know.

Actually, there are specific provisions in the law for that sort of
copying. However, for home users, such provisions are redundant until
such time as non-comercial copyright infringement even becomes a
misdemeanor.

You also neglected to mention that any Atari user who wants to
make archival backups of their copy protected disks must take
efforts to secure the software that does this. For the 'honest'
user, this requires extra monetary expenditures in order to

'fairly use' their software.

Since such software is commonly available to the point that
even an 'honest' user such as your self has access to it
(after forking over more money) then: my original point
still stands.

This is one aspect of Atari-dom which is yet another hurdle.
This is one aspect of Atari-dom that the 'others' don't have
to put up with.

Suggestion to the bloke from Hawaii: if you can't do sequencing
without dongles on the Atari: DUMP IT, if you can. Consumers
only hurt themselves whenever they tolerate that which they can
avoid somewhere else in the marketplace.

A suggestion to Peter: suggest an alternative to a Falcon+Cubase
for the Mac. Try to come up with a usable solution for the lowest
possible cost. Don't necessarily recommend the newest most expensive
hardware if the task can be done in a satisfactory manner on the cheap.

This is the domain of _Power without the Price_ afterall...

>

They are descriptive labels. They fit quite well, regardless
of any implications of bad rhetoric.

>/thinking/ people, however. You talk like a lawyer (that's intended as an
>insult) - willing to argue any position with equal venom, er, vigor, as long
>as there's a profit in it for you.

Your assertion is not consistent with the available evidence.

>
>You back-peddle very well, by the way. Anyone who came into this
>conversation late and was unaware that Deja News allows them to read the
>entire thread would think you were being unreasonably attacked.

Anyone with DejaNews could see that a pirate was accused
of activity that is not normally associated with pirates
solely because some SPA wannabe couldn't handle the possibility
of someone being a pirate and actually being a better software
customer [than an SPA wannabe].

If they would wish to discount my ideas solely becuase of
my political views, that is another matter.

Hopefully, they would be more honest to themselves and to others
about their biases.

Oxymoron of the week: Keeping Honest People Honest.

Mind the phrasing: ...Atari USERS have stopped supporting...

Part of the benefit of a legitimate licence on your software
is the support of the demented hacker (or agents thereof) so
that you can take full advantage of it.

>IS software support for those who are dedicated. Cracking commercial

We shouldn't HAVE to be so dedicated in order to find support.

>software and then distributing it via the net or whatever is a crime, and

Depends on the country. It is a safe bet that you just assumed it
was illegal in Canada and never really checked.

>it is such criminal activities that may have attributed toward Atari's
>exit from the computer business...

Other markets survive despite rampant piracy. It is clear that
Atari never properly marketed it's machine in order for it to
gain some threshold necessary market. The C64 maintained BETTER
market viability well into the Amiga/ST era despite VERY RAMPANT
piracy. (ref. Stargoose Warrior, PC bargain bin re-release)

>
>Take heed all those who disagree, your activities are only helping to cut
>your own throats in the long run...

They only serve to make you invisible to the market and decrease
the effective size of it below its already rather pathetic peak
numbers...

>mentioned smilers actions in killing of software houses.

This, of course, assumes that those poor poor developers had any
market to begin with.

Your rant follows from the erroneous assumption that every copy of
every unlicenced program in existence automatically equates into a
lost sale.

Only when willing and able customers are detered from buying can it
realistically be said that software piracy indirectly damages
developers.

Atari thrived on the slogan: Power without the Price. NOONE should be
surprised that a band of cheapskates would NOT be eager to spend more
money (on software).

A Cheapskate Pirate that cannot pirate is not going to buy much more
than a Cheapskate Pirate than can. Buying will still be relatively
limited and 'your poor developer' will still get squeezed out of the
market.

Raw market figures for Atari are meaningless. They only tell you how
many people were willing to buy the hardware and give you no idea of
who was then willing to buy extra software.

The Raw figures painted a prettier picture of the atari market than was
there. Economics did the rest.

BTW - Bullfrog is doing fine...

'Perceived' rules of copyright? How about actual rules of copyright?

Again, you need to go back to your textbook. You have NO understanding
of
the meaning of the words 'libel' and 'slander.'

> Your obsession with my real identity only justifies my use of an alias.
> It also shows that you've run out of any better ideas.

How silly. This is damn near the silliest thing I've heard in a while.
I have
NO interest in your identity. My point is, you should at least have the
guts
to use your own name when discussing issues like ethics.

> Never given was any justification for accusing that bloke of commercial

> The ethics of software piracy has NOT been an issue in this
> sub-thread, despite your attempts to use it as a red herring.
>

Let's look at the score:

1. Someone looks to pick up a pirated version of currently commercially
available
software (Cubase Audio). You run to his defense, claiming that copy
protection
doesn't work, Atari is a dead platform, etc.

2. I, and others, point out that piracy is unethical and wrong, especially when the software is currently available commercially. (Steinberg, although claiming there will be no additional releases of CAF, just released version 2.06). It is pointed out that owning pirated software is illegal.

3. You accuse me of slander, threaten legal action, etc etc. I accuse you of cowardice and hiding behind a pseudonym.

Now, to continue. Yes, copy protection DOES protect software publishers from unlicensed use. Not all that often, true, and it's not very effective.. but it does occasionally work. I had a friend who wanted me to give him a copy of Cubase and the dongle, then write to Cubase for a new dongle. He offered to pay the dongle replacement cost and a premium to me. Although tempting, I found it to be not worth the hassle (as well as unethical). He then went out and bought a copy, although he had to scrimp and save to do it. If Cubase wasn't copy protected, I probably would have given him a copy to check out, and he wouldn't have bought a copy (he owns lots of pirated software, and, like you, has no problems with owning it).

So, on to my 'justification:' Piracy is illegal, copy protection clearly makes piracy more difficult for the casual user, and I never claimed it serves to stop piracy.

I say, let those who work to create a product earn money from the product.

I guess you don't go and out and buy MagicMac unless you want to run
atari programs and I suppose you wouldn't be wanting to run atari
programs if you really liked the Mac ones. I suppose the buzz of
making a sugestion to one of the authors and seeing it a reality the
next week isn't proper internet support. I reckon there's no excuse
for software running on an alien operating system, on an alien
machine, accessing alien hardware to be a little tricky to set up
either. [wry grin]

Well, there is a TT version, but I don't have a TT so I can't tell you
how well it works...

Since your using AES 4.1, I should warn you that I've had no luck getting
Warp 9 to work with AES 4.1, I've tried putting it before and after MiNT,
doesn't seem to do anything, and the config ACC says Warp9 is not installed.
If I run it from GEM.CNF, it says "load me from the auto folder". Anyone
know the trick?

>YOUR HELP IS NEEDED
>-NIC

First of all- I think something's wrong with your caps-lock key; seriously though- you shouldn't use all capitals like that as it's considered "shouting" and rude on the Internet. Besides, we can still read lower case letters you see ;-)

But back to your original question- yes! An Atari ST can be emulated on the Mac using a program called "MagicMac". It installs a complete operating system on the Mac, where you can run most well-written Atari ST programs (and a lot faster than on the ST, with hires colour etc.)
If you're interested, check out Zan's MagicMac page (where you can also download a demo):

http://members.aol.com/zan660/mhome.htm

As for emulating the Mac on the ST- why would you do that?
Yes, that's also possible using additional hardware, but you can forget about running modern Mac packages on your ST- first of all because of the memory limit, secondly because of the speed. I'd suggest you keep your Mac programs on your Mac.
Hope this helps.

: PS!!!! How many Falcon owners are programming for the ST range ???
: GOTCHA!!!

I do. I am in the process of writing Neuromancer for the Falcon, but that is the only program I'm writing that is Falcon only. (Even then, it may never come out as I'm going to send it to Interplay, who have the rights to it, at which point they may decide not to put it out.) Everything else that I have written will actually work on a 260 ST, with a single sided drive on either a colour monitor. The great thing about writing stuff for the ST range on a Falcon is the speed increase in compiling (especially since my Falcon is accelerated). Oh, and keep an eye out for Wolfenstein-3D for all Ataris. id released the source for it to anyone who wanted it, and I'm trying to finish this one up. (I might make a Falcon only version, but I'm not sure at this point)

Message-ID: <322b78ee.25476721@news.airtime.co.uk>
Source record: 138805

I recently asked in here, c.s.a.st for game tester/s for tos 206, I made a point of asking for uk residents for the hertz rate as it is different in other countries and may have a different effect,

I got replies from all over the world, many from America who are now successfully testing the game (all looks well), I also had replies from other parts of the world,

But not one single reply from the UK?

The game would seem to have survived all the testing on various tos versions, It is a shame I could not test it in the UK though :((, the game is now having the finishing artwork added prior to imminent release,

Coming soon HEARTLAND.....For ALL ATARI STs....FREEWARE
Fast 8 way scrolling, Largest game map ever on an ST,
Animated backgrounds, Enhanced sound on STe models,

!ynoT.................STOSSER Software......

Hi
I'm in the process of creating music on my 1040ste and would like to get
a web page started where I can feature my compositions.The musical part
I understand but the www is still a bit unclear to me.Can I have a web
page that will play the music when someone visits my site or do I have it
saved as a ??? file? Can my Atari be used for this?
If anyone is interested enough in giving me this and other info,I
would really appreciate it..Thanks...Ron L

Anyone get this working? It starts to work on my Falcon, then requests that disk #1 be inserted (and, of course, it already is). I saw on a compatibility FAQ where some folks claimed to have gotten it working, while others said they had failed.

I'm wondering if some sort of copy protection is being triggered.

I've tried FalconSX and VCB ST emulators, no help.

Well, the quickest way to get a faster screen update is the latest version of NVDI, and you get SpeedoGDOS support to boot. As far as hardware accelerators go, I was really happy with the 16 MHz Adspeed STe I had in my STe, made it easily as fast as a Mega STe. Try ICD and see if they still have any, they should be less than $200 US. A T25 would be nice, but AFAIK the PLCC adaptor costs a lot, _if_ you can find one.

I know this is an old song, but here it is again:

What kind of memory chips go to Falcon Wing SIMM expander? I have the impression that only 70 or 80 ns. 36-pin 9-chip SIMMs will do, but as they are ridiculously expensive compared to standard SIMMs, there must be some other solution also, it there?

Also does anyone sell Falcon SIMM cards (empty) for 72-pin 70ns 16Mb SIMM?

Cheers to all Atari users from an old fox, who still hasn't got the guts to sell the old bird, even that it's now without memory, and Turtle Beach Pinnacle & Spdif is arriving soon... :-)

I too had no problem changing from SLIP to CSLIP under STiK. My provider automatically shifted to CSLIP just fine, and I had been using SLIP for months before that without problems. I made no changes to the dial-up script. It does not _have_ to be a hard coded SLIP connection to work (although, apparently in the case of at least one user this compression detection was a problem -- I would still be interested in finding out it the ISP had something set up wrong... does he have any other uncompressed SLIP users?).

Hiya!
I guess I missed that one :-(
But I had a look at my harddisk on my STe and found it there.
"Fserial 0.96b". Pehaps there's a newer version though (with English docs,
because this one had just the German ones).
Anyway, the CPX is there (version 1.0).
How come you need just the CPX, as it was obvioulsy included in the
package?
Want me to send it to you, or upload it to the site? (I'm not sure if I
should include the whole package or just the CPX)- any comments?

You can find both the AUTO program and the associated CPX module by
downloading:

ftp://ftp.sn.no/user/hallvart/atari/maccel33.zip (13 Kbytes)

As for the interfering with other programs- I know what you mean, and
that's why I switched over to this simple screensaver. And an added bonus
is that it doesn't blacken the screen but inverts it (changes from black to
white and vice versa) so you'll be able to see what's on the screen even if
the saver kicks in!

NVDI will speed up screen display, and add GDOS capability as well. The latest NVDI even supports TrueType fonts, of which literally thousands are readily available (I have a CD with over 700 fonts on it that cost about US$5, IIRC).

If you want everything, including the disply, sped up, a CPU accelerator will be in order - it will be more expensive and harder to install, however, since it usually involdes desoldering the 68000 CPU chip.

You should be able to find a suitable vendor for either or both at my bookmarks page (see .sig beow).

If I understand you correctly, you ISP's software fails to detect that STiK wants an uncompressed LSIP conection. I have SLIP, CSLIP, and PPP available on my account, and have no problem using any of them (SLIP with STiK, PPP with NOS, and PPP and CSLIP with Trumpet Winsock). I did have to ask my ISP to set up for uncompressed SLIP, but when using Trumpet with CSLIP, his software adjusts accordingly. It would therefor appear that the problem is specific to your provider, not to STiK.

If you get on the ID web page, you'll find they released the sources for
Wolfenstein 3D. I picked it up, but haven't looked at it yet.

I need a place to post my Transcendence BBS Top Ten program, if not here.
Suggestions, please.

3943. FOR SALE: 520ST, Older ST Games

Newsgroup: comp.sys.atari.st
Date: 1996-09-04 00:00:00 UTC
From: rmgreen@ionline.net
Message-ID: <50krm4$3tk@server2.netrics.com>
Source record: 138576

Dear 'Net Atarians;

I have the following items for sale. Please note that prices do *not*
include the cost of mailing/shipping (your choice); once I find out where
you live, I will inform you as to the extra cost.
The items are as follows:

Atari 520STFM, currently 0.5M, TOS 1.4, double-sided DD drive $60

Ultima V (Warriors of Destiny) $10
Balance of Power, 1st edition $ 7
Autoduel $ 5
The Bard's Tale $ 5
Roadwar 2000 (SSI) $ 5
Phantasie (SSI) - not the whole trilogy, just Phantasie I $ 5

ENTIRE PACKAGE DEAL: $85.00

The computer comes with Atari mouse and original packaging/padding.
All games are in their original boxes, with full maps/manuals/supplemental
materials - right down to the miniature toolkit sold with Autoduel. All
games listed above are for the Atari ST.

Interested parties may respond to rmgreen@iop100.ionline.net or
rmgreen@ionline.net (whichever works best from your site).

Thanks very much.

- Ronald M. Green -

>Is Oasis 1.35 compatable with Geneva 1.02? I've just tried running the
>one with the other and found that I cannot highlight any text in the
>Oasis windows, this sort of renders Oasis a bit useless. Can this be
>fixed by fiddling with the flags or am I just wasting my time? Does
>anybody use Geneva with any success?

Oasis 1.35 relies on a undocumented (?) feature in GEM that makes it
possible to react on both mousebuttons. This is not implemented in
Geneva 1.02.

I'm using Oasis right now under Geneva 1.04 in singletask mode without
any problems.

Why are you still using 1.02? Upgrades to 1.03 and 1.04 can be
downloaded for free from Dan Wilga's homepage.

>XCONTROL?

SILKMOUSE contains a screen saver. This is a very handy program that
has the best response for the mouse on any screen resolution. The CPX has
a built-in screen saver as well as other options. It is available at the
Atari Archives at the University of Michigan site.

Let's see. For the moron formerly known as JEDI, here is a short list
of programs that I know are currently copy protected on platforms
other than the Atari:

-Cubase (mac and PC)
-3D studio (dongle, parallel port, PC)
-Pro Tools (mac)
-Waves plug-ins (Mac, dongle) The most popular manufacterer of
Digidesign TDM and SD2 plug ins
-Macromedia's DECK 2 (Mac)
-Sound Forge
-Wave Lab
-Emagic Logic

Please join in, everyone, if you know of more..

Let's read JEDI's quote again, shall we?

> is why Atarians
> in general still have to put up with the crap and
> NO ONE else does.

That's a lot of 'no one's!' Only some of the most popular
multimedia development tools that exist, that's all.

>

You are the most paranoid individual I've ever been in contact with via the net. Yea, I'm really out to get ya, ain't I? Besides, I know who you really are now... :)

> You are making my point for me. I sheild myself from illegal
> retribution as I have not yet done anything that would allow
> for legal forms of retribution.

Actually, it's a matter of what many people consider netiquette. I would not hesitate to say anything to you in person that I've posted on this BB. Since you hide behind a pseudonym, you don't have the courage of your convictions to stand on.

> So what? I prevent illegal action from being performed upon
> my person.

Don't be so presumptious. As if anyone CARED enough about you to perform 'illegal action.' If you posted comments that you would stand behind, that's one thing. If you post comments that you cannot stand behind, that's cowardice. No one is going to come through the phone line and 'perform an illegal action.' Paranoia..

> Well, considering that, in my own personal experience, the
> only sorts of online creatures obsessed with real identities
> are those that would do people harm: it wasn't such a bold
> statement.

Oh? You've never met someone you liked who asked for your real name?

Again, you make excuses for yourself. You're hiding behind a pseudonym because you don't stand behind your statements.

> Read some history, old man.
> Some progesterone might be in order as well.

Again, the picture that you have of me couldn't be further from the truth. Have I ever threatened you? No. All I'm asking is that you stand behind your words, not hide behind a pseudonym. What you don't seem to understand is many people on the net do what you do so they can be irresponsible in their conduct. I believe people would be more responsible if they used their real names. It's a matter of taking responsibility for your own

actions.

Again, it's cowardly to not stand behind your words.

> >Child, I believed it was you, but if I'm incorrect, I retract the

> >exactly move Win95 numbers.
>
> Ouch! So your saying that those single digit piracy prevention
> numbers represent a double digit share of the market? OUCH!

You are an idiot. I didn't say anything of the sort. Re-read my
post above again.

> >> This is a nice, self-serving statement, but it does nothing to
> >> address my points.
> >
> >It's not self-serving, asshole. I'm not a programmer! I'm a musician.
>
> Yes it is. Your thinking is much too limited.

OK.. if you're thinking is so much more advanced then mine, put up or shut up. How is it self-serving of me to believe that programmers should get paid for their work, when I'm NOT a programmer?

Conversly, if I were self serving like you, I'd believe that I DESERVE to get the programs for free. That's self-serving. I'd love to have Logic Audio Falcon to go with Cubase. I'd love to have a universal patch editor/librarian. If I were 'self-serving,' I'd post messages to try and obtain cracked copies.

The only way it might be remotely self-serving is because I believe programmers who are adequately compensated will continue to support the platform and create greater and better software.

3948. MagiC Disaster

Newsgroup: comp.sys.atari.st

>I disagree. You must have a very short memory. Or perhaps we interpret what
>you have said differently. Are you now saying that piracy is unethical?

I said it was ethical under a specific set of circumstances.
The pirate I defended did not meet those critera and I said so.

In the other instance, I was objecting to the false accusation,
of a significantly different crime than it would be stated he
is guilty of, of another pirate.

In one instance, I retracted.
In the other instance, defense of piracy was never there.
I wouldn't be surprised if it was merely percieved, however.

One crime never implies another.
Guilt by association is unacceptable.

And you did LIE to make a point.

>piracy issue (as you do on a regular basis, EVERY time the subject comes up.)

Claes stated that the only reason he was capable of buying software was
that he was selling copies of it.

I stated in my reply that this deviated from 'normal' non-commercial
piracy. This distinction is made by both the law and the pirates
themselves.

Apparently, the distinction escapes you.

It was explicitly stated that the user was a pirate and a good customer
as well.

Claes, apparently, couldn't handle this.

> At this point, poor Mark probably wonders himself what he actually said; I

What you are conveniently ignoring is the effect of price on
demand. You are also conveniently ignoring the nature of the
demand. If his percieved utility does not match the price, it
is HIGHLY likely that there will be no sale.

All other things are NOT equal.

Your arguement is much too simple.

>
>(2) Every cracked copy of copyrighted (and copy-protected) software in

This appears absurd purely based upon semantics.

>his programs for money (commercial or shareware) will leave the Atari
>platform and program for the PC, where even a piece of absolute crap is

So, Gilman, despite having a bestseller, will have a temper tantrum,
insult all of the users and ensure that he irks people enough that
he wont sell an Atari ware again, just because warez are floating
about.

This is inevitable. Live with it.

The relevant datum is the sales figure.

Either the market really isn't large enough to support
any real software development, or atarians really are mostly
theives.

They both have the same effect. Culling all the pirates from
the platform will have no net effect. The real market will be
the same as it was before.

The sales figures wont change.

Any reformation will be done to the benefit to the developers
of other platforms.

>gauranteed sales of at least ten thousand copies if it has pretty pictures
>and good distribution.

Actually, in the PC market, unless you're really BIG or really
innovative, you don't stand much of a chance.

>
> I> Sorry: the universe isn't that simple. If you'd spent less time being

>view of the world. You are also perfectly well aware that we are no more or
>less narrow-minded that you are; but for the purposes of this discussion, you
>have chosen to make personal attacks because you know quite well that "piracy
>is the same as shareware" is not only specious, it's a silly position when
>analyzed rationally.

A personal example: someone gave me a pirated copy of something by
some author. I liked it. I never would have tried it had it not
been given to me for free. I never would have considered that I
would have liked it. However, I did like it. You would decry my
bit qa-piraty. It, however, benefited the author in the long run.
That 'illegal' act benefited the author far more than if I would
have just 'done the right thing'.

Shareware-piraty is perfectly ethical. If it is done as such,
NO ONE is damaged. It is NOT immoral.

As I have stated before, what is your Nominative Ethical
Theory that concludes that shareware-piracy is immoral?

>
> I> This subject is not as binary as you'd like to think it is.
>
>Kindly show me where theft shades into legal ownership and I'll agree with
>you.

When someone buys it because they like it, and delete it because
they derive no utility from it.

No direct damage is done to the copyright holder.

The copyright holder may actually be benefited by sales that would
otherwise not happen due to poor marketing or the unwillingness of
some to gamble upon potentially buggy (or just plain useless)
software.

>
> I> As always, the only way that you can make a point is to LIE.

>Moral superiority doesn't keep burglars out of an unlocked house. Any

A computer program is NOT a house. Any idiot can recognize that fact.

>/idiot/ can recognize that fact. And people who are normally honest will
>often steal when they feel they stand no chance of being caught, and when

>they don't think the person or business they are stealign from will be hurt;
>that's been a long-established fact in psychology (readily available for you
>to look up in the University library, I'm sure). Your argument that "piracy
>doesn't hurt anyone" is rationalizing theft so you won't feel guilty.

Actually, my arguement was that 'piracy hurts X' is unjustifiable.
Most of the pirates I have known would not have been able to pay
for all of the wares they had. If they would have chosen to deprive

themselves of their 'collections', they could have bought a few
meagre packages (in comparison to what they had).

>Rationalizing your culpability doesn't make it legal, and doesn't ameliorate
>the harm you do to software developers.

Your slander doesn't make me a pirate either.

A pirate with Y dollars, much less than X, is still a
pirate with Y dollars to spend. The SPA can't change this
and neither can you.

IN the end, less unlicenced wares may be in circulation
but, the net gain will not be the great windfall that you
believe it to be.

This is why a universal argument of this nature fails.

It is not damage, really but, the absence of benefit.

The benefit will likely never be as great as the 'damage'.
[deletia]
> >> >> - there's someone who openly espouses piracy. ...

>I am afraid that most people who can add and subtract are able to see that
>distributing software which has not been licensed is likely to result in loss
>of sales. How, pray tell, can causing lost sales make a "better software
>customer?"

THEY BUY MORE.

They know what's good & what's not, They know what's fun & what's
lame, They know what comms go bannas when a compressed disk gets
full...

As long that customer doesn't steal away other paying customers,
then the developers are not being deprived of any real, lost
benefits.

One pirated copy of X does not equate automatically into a lost
sale of X.

Only if someone is willing to pay Y for X does THAT pirated copy
of X equate into a sale of X.

It is quite a bit easier to sell something for free than it is
to sell it for X. Demand falls off rather quickly.

Howdy, folks... I'm a Mac guy who just discovered the magic of MagiC, and I'm going thru some of my old ST disks. I've got a lot of programs that were packed to save space, but of course a lot of 'em crash under MagiC for some reason. I used to have a neato program called Mega Depacker that would decompress just about everything out there, but I can't find it! Anyone seen this little gem? If so, I'd appreciate the info.

Thanx!

AES 4.1 works fine in all three resolutions on my MegaST. Very nice in lowres,
also very cramped... :P

It works perfectly in all modes for me. I'm using TOS 3.01, NDVI 4 ET 4000, and a Crazy Dots II video card. So no, I'd have to say it's not normal. You might want to check what accessories and/or AUTO folder programs you're running.

: BTW, do you know how to setup syslogd? It's the dialler, is it? I can't
: find any man pages or How-to about it in the TAF disrib, and i don't
: understand the syslog.conf file. When executed, i have the message 'can't
: open u:/dev/log' or similar. Any hints?

syslogd isn't the dialler. As the name implies, it's the system logger daemon; it write a log of significant system events. It is needed for PPPD; I'm not sure about SLIP. I would suggest grabbing the MintOS distribution, and setting it up. It sets up all the directories correctly, along with the permissions. I seem to recall that syslogd needs to be run in supervisor mode. You can change the flags with chmod, assuming you have a MinixFS partition, although I don't remember how :(

I use ESSCode 6.4 all the time to extract Base 64 files. Unlike UUE files, you have to make sure all extra stuff at the beginning is stripped out, or it won't work. And it should only have one "------" (etc.) line at the beginning.

>GOTCHA!!!
>
Tony seems to have hit what used to be my biggest problem on the head.

Its very very difficult as an 'amateur' software author to create
software that will run on all setups.

The first problem that is encountered in writing it, is the not
knowing if the commands, libraries etc. that you are using, are
actually compatible.

The second problem is that if you've not got the machine to test the
software on, you don't know if its going to work.

What I try to do now is find some kind souls out there who will test
my program. They still seem to come back with more design/code bugs,
than actual compatibility faults :)

I think if you have the 'net as a resource, and are planning on
releasing software semi-seriously (even if you aren't charging for
it), it may make sense to maybe ask for some beta-testers, to see if
you've missed anything, to suggest enhancements and new ways of doing
things, and also to test for compatibility on machines and OSs that
you don't have.

The above problem however will only overcome a)some of the problems
b)will make the software 'compatible'

however writing software which takes advantage say, of the Falcon,
rather than just being compatible, is nigh on impossible, when you
haven't got one to test/write/develop on.

Mine too :)

I have this problem all the time on my PC... different OS's and
keyboard maps have slight inconsistencies with the actual (physical)
keyboard... which I never get round to fixing. I'd say 99 percent of
the time, the keys are simply swaps.

there is are various keyboard mapping .acc around (i have a copy if
anyone wants one) which allows actual chars used to be moved to other
keys.

> S>
> S> Highsoft Basic is to plain for me.
> S> You can do more with GFA Basic. I prefer the IF's and other things.

I've never put down Hisoft Basic, as I've never tried it. However as
STF put GFA 2, and then GFA 3 on their coverdisks... GFA Basic very
much gre on me.

I've tried various simple comparisson tests to find out which of the
basics I've tried (GFA, STOS and QBasic (erg PC)) to get an idea of
the speed of each.

However I've never tried Hisoft basic and so have no idea of how fast
it is in comparisson to the others (this is _part_ of a reason to
using a basic).

If anyone out there with a knowledge of basic and a copy of Hisoft
basic would like to get in touch, then maybe we could run some 'fair'
compraissons of the top basics: GFA, Hisoft and STOS (Tony - using
STOS so much, you know far more than me... would you like to put
forward STOS's side of the story ??).

If anyone would be interested in designing and carrying out a set of fair
tests for each comparisson of the basics... please get in touch via
email.

Personaly, i got it from a local BBS. The fserial.cpx was a part of the
'Fast Serial' utility which is similar to the HSModem one. The name of the
archive was 'fser096b.zip' or 'fser096b.lzh', or something near that.

I can't e-mail the complete archive as i do not have e-mail access, sorry...

I'm not that familiar with CAB (I only use it to check my pages offline as
it doesn't have a PPP interface which I need to use it online), but I
suspect that one problem might be that the ghostscript package is .ZOO
compressed :-(
As I've heard in many cases, there might be problems using certain web
browsers as they transfer unrecognizable files as ASCII-files!!!

You might want to go back to basics and use the good old FTP method.
Good luck!

I just picked up a used Atari computer with PageStream installed on the harddrive. It has a manual but it is badly damaged and parts are missing. I am interested to make it work for some college flyers I am making but the part about 'running' text around an object appears to be missing. I see the heading in the drop down menu but all it does is present me with a small hollow box as my mouse pointer and doesn't do anything else. Can someone tell me how to do this in 200 words or less :).

Thanks,

Paula

3972. Falcon, Ghostlink, HSMODA07, 8250 UART

Newsgroup: comp.sys.atari.st
Date: 1996-09-04 00:00:00 UTC
From: Aardvyrk@cris.com
Message-ID: <50j5ud$b3f@herald.concentric.net>
Source record: 138672

I know that this topic has been beaten to death and then some, especially on maus.de, according to DejaNews.

But-- I have a later model stock Falcon, 14 megs, with FPATCH2, DRVIN, and SCC as the only auto progs for testing. A TT post I found referring to HSMODA06 advised using the 110, 130, and 150 settings to stand for the higher baud rates in modem.cpx, as well as using modem.cpx to set RTS flow control. I've tried every combination I could think of or find, both on the PC and ST end, but the symptoms continue like so:

I can connect with both machines (an ol' Zenith 286LP w/ 8250 UART) at 115200. I usually use the modem option in Ghostlink, rather than aux. I can send to the PC very fast. It looks like it's going at the full baud rate. Receiving from the PC seems to always be at 19200 baud.

I wouldn't mind this so much if the traffic both ways would only go 19200, but this is just a miserable tease! I realize that I probably wouldn't have any of these problems if I had one a' them 16550 doohickeys, but I got what I got. I just don't get the difference in speeds according to the direction of the transfer.

I had also set the PC to baud 115200, 8,n,1, RTS on before I ran pcslave.

Do you suppose it could be the cable? I think I read one of Rich T.'s posts warning against Laplink cables saying that they weren't true null modem cables. Would this be a symptom of that?

Yeah, I probably could have spent the $10 before I wrote, but I know how you all love a good puzzle.

Until then, I remain just an

installation program for Linu??

I installed it once (from the CD version) ... then had some HD problems
which stopped it booting. Now I find there's only the German installation
program on the CD, and I don't understand German ;-(

Any help appreciated.

I have a copy of the TWP DEMON 1.8 that will convert Thatswrite 3 and
Wordplus files to WordPerfect 5 & 6. The full program cost $20.

Then there is 1WP-RTF that converts 1st WordPlus files to Rich Text Format
that can easily be viewd on a PC. With layout preserved. I also have acopy
of this. I dont think this has any features disabled.

But they were both on subcriber disks of STFormat, No: 74 & 83
respectively.

Let me know I can always email them if you cant find them elsewhere

Any version of HDDRIVER, even 1.0, supported different cluster sizes. In fact, any driver does. What you probably mean is the support for different _physical sector sizes_. This is important for some drives, especially for MOD drives. For these drives media with 512 and 1024 _physical_ sectors exist.

It's Wednesday 4th September. How did it go yesterday? I checked the page and only found an index.html which points to an index.html, which points to an index.html, which points..... I'm beginning to see a pattern here.

I never comment on the merits or demerits of products until I've had the chance to play/break them myself.

Yes, Microsoft and Netscape were used to release this item. If that bothers you, learn filtering. Me, I'll play with any system - depending where I happen to be at the time.

> or not. But since this is a hardware issue, I thought I'd mention it
> here.

I have the external/portable version of the Jaz running on my Falcon.
(and I am very pleased with it)

I use ICD Pro drivers.

To the point: the external model has a 3 position switch for
termination:
Off
On
Auto

In the latter position it auto-senses the need for termination and if
terminating a small led lights up. It seems to work fine.

My guess is if your drive probably doesn't have the auto-termination..
but I could well be wrong.

Also, check to make sure that you have the proper init string for your
modem, and that you're communicating at the proper speed with your modem.
Most 28.8Kbaud modems need to communicate at 57600 baud with the computer,
with RTS/CTS flow control. HSMODA7 will give you the necessary speeds.

Also, check and make sure that MSU is the same as the providers' specs, and
that Van Jacobson compression is set to off.

The field service manual is quite informative, it explains the hardware &
includes circuit diagrams. Not sure where this can be purchased now.

There were some books on the internals of the ST, AFAIK they are out of print.

There is an E-text called CHIPSXXX (XXX being the revision) which has some
information about Atari specifica part numbers, modifications & bug fixes.

It might be on Umich, more likely on a German ftp site.

There are several hardware modification texts on Umich, the information in
these is also useful.

Several of the (now defunct) Atari magazine used to have articles on the
internals. They won't be very technical, but they often go into specifics
about the internal parts.

Switch to another platform. Start participating in the various Usenet newsgroups that pertain to that platform. You will be surprised how helpful they will be in getting you set up with the software and hardware that will fit your particular needs. It would help if you took a mild approach in replying to them whenever they do correspond. I am too old and lack the patience to offer any other good advice. Pointed (no-nonsense) suggestions are the most useful. Don't be bitter about things and spend your time dwelling on what system you should have spent your time and money on. Be flexible and happy. Get on with the good stuff. Turn that frown upside down! Good luck with your endeavors! Ciao!

Well I "do" know that the ports were from the older Atari's as well as
the STe having the Jag's ports as well, but...

Why are the ports are underneath the keypad in a way they are hard get at?

Why does wearing out the mouse port ruin the entire keyboard? (I had to
replace it once)

Why is pressing the right mouse button and joystick fire button do the
same thing? Well, this is really cool...

And why does the ST choke on normal paddle signels which makes it
impossible to use a Sega pag on???

As for as the "ST" design goes, are these people now in a California
asylum? :)

Thanks to the hard work of Philip Louie (p.louie1@genie.com)
a new FAQ for the Atari ST series has been written.
Based on the old ones, this one has been updated to include items newly
available, but omits the specialized stuff (Mint etc.).

This is what Philip writes about the new FAQs:

<>

The new FAQs can be downloaded from:

ftp://ftp.sn.no/user/hallvart/atari/info/n_faq1.txt (23 Kbytes)
ftp://ftp.sn.no/user/hallvart/atari/info/n_faq2.txt (29 Kbytes)
ftp://ftp.sn.no/user/hallvart/atari/info/n_faq3.txt (41 Kbytes)

(the old FAQs can also be downloaded- from the same site/directory)

Happy reading!
And thanks Philip for your hard work- well done!

JEDI wrote:
: This is a request for information. I am curious how one would
: go about replacing an Atari Falcon & Cubase sequencing setup.

First and foremost, you need to buy a few 'roundup' issues of Keyboard or Electronic Musician, where they might compare most current s/w available, price, etc. The Keyboard roundup was not more than a few months ago.

Steinberg has a nice upgrade/crossgrade policy--I think it's half price or something to that extent.

: There is a certain form of inconvenient, physical, copy protection
: that comes with Atari Cubase: a dongle. I was wondering if it would
: be possible to escape this 'inconvenience' by switching to another
: plaform (PC or Mac).

Got news for ya, puppy. I know for a fact that the PC progs have a dongle. Except since a PC doesn't have a cartridge port, they designed it for the parallel port, AFAIK. I believe that it's a pass-through (they have to let you hook up a printer, hm?). For evidence of wierd stuff with their dongle, do a DejaNews search (old and current archives in power search) on alt.steinberg.cubase for 'dongle' or 'parallel.'

I don't know about the Mac side, but the odds are that if they h/w protect a $600 prog on two platforms, well, most probably the Mac has some form of it as well.

You either should subscribe to alt.steinberg.cubase or get on the Cubase list (it's the same list) if you want to find out more from Steinberg and their users. Also, Steinberg reps and programmers answer questions and take a fairly active role.

: Most atarians seem content with their 'inconviences'. So, they do
: not go away (like they have on other platforms). So, the frustrated
: atarian has few options: Take it or Leave it.

Every now and then a post crops up on a.s.cubase about the dongle. It was met with the same gamut of responses that we have seen here on comp.sys.atari.st, though it's hard to say which ones were more acidic.

: What would the minimal functional requirements be in hardware and
: software and how much would these cost?

The rest of this post concerns mostly HD recording on multiple platforms. I wrote it before I looked back and saw that you just wanted a seqencer. Many sequencing programs are becoming audio integrated now, so it may

still be relevant. The references for further information, though, would still fit. Sorry for the misunderstanding, but hey! There's some audio info included gratis.

Without audio support, things get a lot cheaper that what follows below. I know that some people install Cubase on laptops with a parallel port or PCMCIA MIDI adaptor.

I can only write about what I know, as I don't have any reference in front of me. I shopped around for different platforms specifically for audio recording, and eventually chose the Atari Falcon, knowing full well that Cubase Audio may not be supported further.

Any DSP port hardware you have will not commute. There are a few digital interfaces out for the other platforms, allowing you to hook up and sync SMPTE to an ADAT or dump to a DAT.

Soundcards are a tricky business on the PC. Out of the thousands out there, you have to find one, review it, search for recommendations from people and/or Steinberg, and then hope it works with your particular PC compatible properly, together with drivers for Win 3.1 or 95. I don't believe Steinberg officially supports 95 just yet.

On the Mac, their audio programs seem to work well from what I've read, but one must be particularly careful as to which Mac you get, as the internal memory, speed and type of chip can and will determine the quality and # of tracks. The Mac has built-in sound.

There are extra MIDI ins and outs and other expanders for 'em and many other gadgets. Due to the sheer number of PCs and Macs out there, hardware and software abound.

The reason I chose the Falcon was because I wanted a device that could record more than 2 tracks simultaneously as well as keep the tracks that I do record separate and distinct. On the PC and MAC, the more popular devices are the Yamaha CBX-D3 ($1000) and CBX-D5 ($2000). They are self contained but expandable HD recording devices with 2 tracks in and four out. The D5 has effects and more DSP stuff built in.

(minor aside)
Do you really want to spend at least $2000 becuase you were insulted by a dongle?
(end minor aside)

Anyway, I can't give you a comparative h/w s/w cost because after I found what I liked, I stopped shopping. I thought about Macs really hard, as the nicer ones can do 24 track playback w/out additional h/w, compressed in the same manner as Cubase Audio Falcon 16 track mode. The nicer ones weren't cheap, though, even used. Shop around the .forsale or .marketplace and look up specs using FAQs and web searches.

I thought about PC's as well, but again, the issue of simultaneous multiple-track recording was and still is alien and cost-prohibitive. I

don't know the max tracks playback capacity. The sheer gigamass of s/w and competition though certainly drew me, and I felt competent enough to troubleshoot and install anything on any one of them beasties, but again with the cost. I would want at least a 133 P5, 16+ megs, big HD (or a small one installed and get a used one), and the PROPER sound/MIDI card. It's much more reliable to use a dedicated MIDI card to sync up the external HD or ADAT recorder.

Anyway, sorry I couldn't give you concrete everything. There's a lot out there, and not enough time to lurk through it all. I'd check with music stores, local studios, mail-order music shops, web pages, catalogs, magazines(!), and anything else I didn't think of.

sinclap2954@cobra.uni.edu (PETER SINCLAIR-DAY) wrote:
>
>Did I miss something here? Two of my detractors are now sworn thorns to
>one another. Continue, don't let me stand in the way..

I dunno if I'd go so far as to call our positions "sworn," but we do have major differences of opinion on the subject of piracy. It's also possible that I have misunderstood his position; in case I am mistaken, let me state it outright: Steve Hughey aka JEDI aka Rodentia aka whatever he feels like using as an alias at the moment appears (to me) to be espousing the free distribution of cracked/pirated versions of copyrighted software, and that such distribution is tantamount to shareware. I disagree /with that position,/ and if I have misunderstood his position, I'll tender my apologies here and now and start over - I was prepared to apologize last night when I discovered his message calling me a fascist; I'm sure he must have known that would set me off, and it did.

As for you, Peter, on rare occasions you have demonstrated an ability to add constructively to a discussion. If you would only stick to that, rather than simply making denigrating remarks about Atari systems (after all, we use the things all the time, we /know/ their limitations probably better than you do, just as you know the Mac's limits better than most of us do), you would be a welcome addition to the ongoing dialogue (multilogue?) rather than a despised pariah. I honestly wonder if you know how truly irritating it is to have someone come into one's "home" and spit on one's favorite chair? Never mind that the chair is old and worn - it's comfortable and it feels like an old friend. That's how it feels when you spend your bandwidth running down Atari, rather than telling us positive things about the Mac. I know the Mac is a good computer - I have written software for it, and even though I don't care for the forked file system, the hardware is perfectly good. By the same token, I work at Intel and admire the hardware (though I despise M$ as an end user and as an individual); I happen to have chosen Atari for myself because it does what /I/ need to do for the least money and with the least hassle. On that basis, you and I could have rational discussions. Of course, if you persist in ad hominem attacks based on my previous career and your assumptions of my political position (which, BTW, are almost 180 degrees wrong), it will be hard to discuss anything.

Of course there is, Tony, but that's not what we're wrangling about. I
don't see how one /can/ pirate freeware - after all, there's no one asking
for payment, and the author usually /begs/ the user to distribute it as far
and wide as possible.

It is a matter of scale actually. If I view myself in those proportions
is it only because your infitesimal (sp) nature allows it.

>so much bandwdith squabbling. Neither one of you has enough experience in
>the Real World to know the difference between "I want" and "I need," and

And just where is that distinction relevant in ANYTHING either of
us have EVER posted. It seems more like it is just another tool
of misdirection. Guilt by association didn't work, so now this
tactic is being tried.

>you're both living in the rarified atmosphere of Universities, insulated
>from the painful realities of life. I don't know how sincrap got that way,
>but Steve Hughey, you are pathetic.

Oddly enough, it is not I that is dealing in the moral absolutes that
one would normally associate with the Ivory Towers.

So? Are these the 'painful realities of life' that you would have us
tolerate?

Guilt by Association.
The presumption of guilt.
Poor consumer protection.
Poor product quality.
Poor product quality when we can get better elsewhere.

As I stated before: people like you, taking the crap, is why Atarians
in general still have to put up with the crap and
NO ONE else does.

THAT is the reality.
Enjoy the platform YOU helped destroy.

>Child, there are LEGAL definitions of those terms. In no way was
>anything
>I said even REMOTELY libelous or slanderous. If you really think so,
>you have even less common sense then I originally thought.

Again for the anacaleptic:

THE SLANDER:

A1: A defends B's rights.
A2: A decries measures that don't stop what B does (Q).
C: A does Q.

Or as you put it:

A1: A defends B's rights to do Q
a2: X&Y assert that Q is illegal.

a3: A accuses Q of slander.
C: A does Q.

In your version, a3 can be trivally ignored. a2 should also
be ignored but, you'd probably contend it. I view both to
be irrelevant.

One is left with:

A1: A defends B's rights to do Q
C: A does Q

This is not a sufficient proof. Either set requires a
'guilt by association' axiom to be true.
(btw I assume this to be universally false [axiom])

B1: A supporting B's right to do -> A does Q.

Also, under the law, in a slander case, the burden of proof
rests on the accused slanderer. If I had a real case, and
this was the sole basis of your statements, slander would not
be too hard to show.

Assertion B1 is contrary to American jurisprudence and political
philosophy in general (ideally).

I object to assertion B1 and the C's that imply it.

Based on the available data, you have no grounds to assume
that I am or ever was a Pirate. Your comments to that effect
are slander as per the english definition of that term.

The same is true for the unnamed pirate:

A1: A does Q.
A2: A does Q*.
C: A does Q*&P.

In order for the above NOT to be slander, Q -> P must be
universally true. In this case it is not even the true MOST
of the time.

>
>> Why should I use my 'real' identity. It only leaves me open
>> to perverts and psychopaths such as yourself.
>
>Now THAT'S the closest any of us have come to slander.

Your insistence upon knowing my real identity would be
rather incriminating in this respect, however.

>
>Yea, all them perverts and psychopaths are all out to get ya..
>they'll put a hex on you via e-mail!

Given the current climate of paranoia, I would not have a
hard time convincing others of that characterization.

>
>The only reason you have a pseudonym is so you can be more obnoxious
>then you would in person without fear of retribution. I think it's

You are making my point for me. I sheild myself from illegal
retribution as I have not yet done anything that would allow
for legal forms of retribution.

>cowardly to post an insult to someone on a BB that you wouldn't
>have the guts to say to their face. By not using your real name,

>Obviously, there is a market.

Strange that I never heard of such a beast. Although, it was
said that Spectre was fully cracked. Odd that that would get
around and NOT Cubase.

Actually, the fact that somone would be desperate enough to
post in this flame fest a request only shows how SMALL a market
there is for such things. Apparently, none of the other, more
discreet, channels had what he was looking for.

Furthermore, 50% of the requests have been from people claiming
to hold a licence.

>

There have been no whys. There have been only assertions. These have
been assertions not even backed up by anecodotal evidence.

>piracy is harmful to developers and to the Atari scene in general. I will

This statement is vague enough to be completely worthless.

>not bother to quote Rod McDonald, Mark Fassset, or any of the others who
>have given clear precepts and reasoning; anyone interested can either read
>back or search Deja News.

Yes: they'll see assertions with nothing behind them.

Also, your unwillingness to 'bother' with even a single quote speaks
volumes. I pester 'peter' about such behaivor all the time; that's
the 'venom' I believe you referenced to.

Spectators: if you have the time to kill, by all means, go back and
look. If you find something beyond bald assertions, buy all means,
bring them to my attention. I would find them a refreshing change
of pace.

>
>You, however, have resorted to thinly-veiled threats of lawsuit for libel

>You can understand _my_ point of view on that, too, eh? :)

Ho of course, yes!, i know i would not be pleased to get something
home and find it dosen't run on my machine, but surely they point that
out as a matter of course?, they usually do list the versions it will
work on,
But do they have to insult a program by saying the "lack of Falcon
compatability lets it down", or simply making a point of the fact it
doesn't work on a falcon and everyone reading the review knows they
mean, not made well then ?
Yes it should definAtly be pointed out what it does and does not work
on, no qualms there, but to lessen there review score because of it ,
is wrong IMHO :)
The magazines have gone now:((, so that part is no longer a problem,
ST News was allways doing it:(but they have had there last issue, its
just the remaining diskmags that do it, I cannot judge or comment on
anything else yet :) <fx:fingers crossed> :)

When it appears that a pirate may be starting to reform
his behaivor, don't then engage in behaivor of your own
that would discrouage further 'reform'.

Accusing a pirate who buys software of subsequently selling
it, without first being sure that he is in deed selling it,
could endanger your own cause and your own objectives.

He may be a fellow who has now decided to begin do the right thing.
Although criticising him for his continued use of un-licenced
software may be in order, accusing him of a much more serious
felony is counter productive.

You will give him, and others like him,reason to go back underground.
You will encourage them go back into the darkness and hide from
false accusations that the pirate, in fact, would most probably
consider grievously insulting.

You may put in jeopardy a process that will achieve your desired
goals.

In the end, this sort of behaivor will only harm developers as
pirates see that 'virtue' does not pay. They will stay away from
where any 'champion of honesty' might be lurking to persecute
them. They will no longer be around to buy; they will safely
steal, as always.

The rabbit should be encouraged to come further out of his hole by
dangling a carrot in front of him, not by smashing his nose
in with a club.

>But, isn't a mod file of Bon Jovi piracy too?

Actually, Paul, the courts have ruled that "sampling" a few seconds of sound, even for use in another commercial recording, is not a violation of copyright lwas (something about "substantially original work" comes to mind). Now, if Bon Jovi himself released a MOD file on CD and you were making copies of it, that would be piracy; but a snippet of sound here and there, all mixed together with /your/ MOD sequencing routines, is considered an original work; you have to right to release it, even if you can't play a note on a toy piano.

Law is wierd and wonderful...

Rather the reverse - they use Base64 because they are clueless. I have
received email flames from that sort for suggesting that "real" newsreaders
don't handle Base64, and for suggesting that posting WP .DOC files encoded
in Base64 limits the readership rather severely. Those flames made sinclap
look quite erudite by comparison.

Design decision - the joystick and mouse are processed by the keyobard
processor; it was probbly cheaper to put the ports on the keyboard PC
board than to add extra connections to the motherboard.

>Why does wearing out the mouse port ruin the entire keyboard? (I had to
>replace it once)

It doesn't. 9-pin sub-D PC mount jacks are cheap. You could have replaced
it for under US$5 if you can solder even a little bit.

>Why is pressing the right mouse button and joystick fire button do the
>same thing? Well, this is really cool...

Same connection, obviously.

>And why does the ST choke on normal paddle signels which makes it
>impossible to use a Sega pag on???

There's no DA convertor in the standard ST ports; apparently it was a
trade-off to allow piggybacking the joystick and mouse on the same port.

>As for as the "ST" design goes, are these people now in a California
>asylum? :)

Possibly. Or they may be working for a japanese firm now. ;^)

>As I've heard in many cases, there might be problems using certain web
>browsers as they transfer unrecognizable files as ASCII-files!!!

It's not the browser, Hallvard, it's the server: The server determines
what sort of transfer to use (7-bit for "unknown" file types quite often,
8-bit octet/stream for "known" archive types). ZIP is almost universally
recognized as an archive; LZH often is; ARC likewise; ZOO and TOS rarely
are. Thus, using ftp if possible is a good choice, as it is up to the user
to decide whether to use Binary or text transfer mode, but under http, one
is at the mercy of the server's administrator. If placing files for http
access, it is best to use ZIP.

>ST, the TT about 12 times.

Yes I know, and would respectfully suggest that you missed the whole
point of the thread,
"About" x times as fast ????
You really do need the machine in front of you, different tos
versions is alright to send out for testing, but a higher spec
machine?, some of my software does work on a Falcon, but I have never
seen it and have to take peoples word that it runs alright,
But for something such as a game, something that needs smooth 8 way
screen scrolling, I am afraid "about" won't hack it, you really do
need it sat in front of you to be able to program something like that
on it ,
Yet when this game is released, they will still moan that it doesn't
work on the Falcon.....
Yes they will when they see it <says I hopefully?> :)))

One day hopefully I will own a Falcon :))))

Cheers.............!ynoT

Have you tried running a digital audio sequencer on the Power Mac, using
the built in hardware (audio in and out)? Tracks drift out of sync,
MIDI timing can be iffy, etc.

> the dos/win 31 combo still beats the
> shit ouf of tos/gem for usability and power.

Not for music.. have you tried running a digital audio sequencer
on a PC using a low cost sound card? Try it sometime.

> Respect to the few voices of reason here and my apologies to you for
> my bile. The rest of you grow up and get a grip.

Sounds like you're the one who needs to get a grip. Butthead,
computers are TOOLS. If you use them to create, or do whatever
you need them to do, and if it's successful, fine. If it's not,
get a new one.

I've been successfully using my Falcon to create music integrating
MIDI and digital audio for over 3 years. Only now are similar cost
solutions appearing on the Mac or PC.

Stop yer' whining. You were the fool to buy a piece of software
before it was ready. Yea, we've all been burned, not just Atari
users, it has nothing to do with the platform.

I'm going to check, but I assume you have v 1.0 in addition to v 0.96b?

> How come you need just the CPX, as it was obvioulsy included in the
> package?

What package, the Falcon? The book only mentions a serial.cpx that will only go to 19,200. I didn't check the disk, but I've got set-ups from other Falcon owners and my own and can't find fserial. I also downloaded the latest Xcontrol and never saw fserial.

> Want me to send it to you, or upload it to the site? (I'm not sure if I

Yeah, I remember buying a 5200 joystick (the black wedge-shaped one with buttons on either side) when I got my first ST and the keyboard went nuts if I booted the machine with the stick in. Try loading the software without the stick in, then plug in once you are in the game.

It may just be a bad stick, too...

Good luck,

Dan

4019. Re: NVDI print to IMG Help

Newsgroup: comp.sys.atari.st
Date: 1996-09-05 00:00:00 UTC
From: jklimch@larry.cc.emory.edu
Message-ID: <50njsg$cq8@larry.cc.emory.edu>
Source record: 138469

Thanks to all the responses to my request. What worked for me was:

FROM: SSweet@mettav.demon.co.uk
SUBJ: NVDI print to IMG Help

j> I use NVDI 3.02 on a Falcon. I want to use the Save as IMG function
j> so I can use Straightfax without rebooting with speedo for faxes. I
j> can't get this function to work. In the Printerconf. CPX, I have the
j> option to switch from my default printer to the IMG.SYS printer.
j> However, I can't get Atari Works to recognize it. It just prints out
j> with the regular printer driver. This is true even if I save the
j> Printerconf with the img.sys driver. If I close the CPX window then
j> re-open it, I'm back to the printer driver again. Any ideas?

Have you got the IMG.SYS driver listed in your ASSIGN.SYS file as device no
91, like this
;
;Systems Printers
;
21 PAGEPRN.SYS
22 PAGEPRN2.SYS
23 STFAXSPD.SYS
31 META.SYS
61 MEMORY.SYS
91 IMG_0300.SYS

I don't think it matters what relolution that's set in the IMG driver
(91). This seems to be taken care of in the NVDI Prinrter config CPX
(mine's set to 198 for faxes). I guess you could save different
resolutions & change say from IMG_0300.SYS to IMG_198.SYS with a reboot
rather than using the CPX. It's puzzling that this solution works as it
states quite plainly in the StraightFax docs for Version 2.5 that the
StraightFax Drivers won't work with NVDI. Just goes to show what RTFM
then IgnoringTFM will do.

Derryck Croker (DCroker@mettav.demon.co.uk) wrote:
: This message from SBagley@cameo.co.uk to All came in on a wing and a prayer...
:
: Not quite right, the IMG.SYS driver needs to be entered as device 91 in the
: assign.sys file, it can be selected as the output device by selecting it from
: the Driver box at the top of the drivers CPX.
:
: Best and easiest to use the STFax Speedo driver IMO.

I agree with this but I'm puzzled by the reference to the Driver CPX.
This didn't come with my version of NVDI. I'd love to find out how to get

a copy.

Loose chips. Lift the front of the case (near the space bar) about 3-4" off of the desk and drop it. If it works after, you had loose chips and should go in and reseat everything you can.

Or, you could just go reseat everything anyhow. I've never broken a machine with the "drop" method, but wouldn't swear by it. ;^)

> First off, I find it kind of funny that you have the same pseudonym as a
rather popular web site for currently developed Atari software.

Secondly, you're mostly right, but you are so pissed off at Lexicor that
you can't see straight. Actually, the _only_ thing that killed Atari was
the fact that the Schlameal (say it out loud, you'll get it) boys couldn't
market to we (exclusive) lame Americans who buy all the crap we see in
advertising, like PCs are better. Horseshit.

Third, you are also very wrong. Had people bought the better (at any
price) machine in the mid-80's, Atari would be the standard.
Unfortunately, people believed the crap about a 16-bit computer (the ST is
32 internal, remember) with monochrome video, no significant GUI and less
usable memory for twice the price being a good deal. With more sales, the
Atari would have developed more rapidly and Digital Research (remember
them?) would be the Microsoft of the computer world (of course, _their_ OS
worked, unlike some others). My Falcon, clocked up to 36 MHz, is as fast
as my wife's DX4-120, and far more usable. I crash out of Netscrape/DOS
6.22/Win 3.1 at _least_ once per Internet session. PCs are crap, they are
Volkswagons with Lambo engines, all power, no transmission, no traction,
no handling. Hell, I crashed trying to post this message. Okay, why don't
I access on the Falcon? Set up. Sure, I've been too lazy to get it going,
it's easier to reboot once an hour. But I know I would enjoy running the
Falcon much more.

And yes, as a former Atari stock holder, I am _sure_ that Atari was a long
term stock swindle.

>then.. :)

Actually, DB there has deliberately obscured the truth by revealing only a small part of it ("the elephant is like a rope..."). Fact: ALL computers are oversized calculators. The have a very limited set of functions: Move data from one place to another, add, subtract, multiply, divide, compare. That's all ANY computer can do. Period. The difference between Computer A and Computer B is how the packagers have designed the interface between the computer and the user. If every box on the planet came with some version of MagiC pre-installed, it wouldn't make a hill of beans which one you bought - it would be how good do you want the sound and graphics, how fast do you want to crunch numbers, how much can you spend, and there wouldn't be any other differences to talk about.

>> the dos/win 31 combo still beats the
>> shit ouf of tos/gem for usability and power.

DB is deluded in this case. Microsoft products are bloated and slow, requiring orders of magnitude more system resources to accoplish the same tasks that are done in TOS programs every day. Example: Win95 requires about 80 megs of hard drive space just to INSTALL (and still have room left over for any other software) and runs like a one-legged dog in less than 8 megs of RAM or on a CPU at any speed below 66 MHz. The TOS desktop in a Falcon lives in less than 2 megs of ROM, takes less than 4k of hard drive space, and can comfortably operate in 4 megs of RAM with an 85 meg hard drive. This is on a 16MHz CPU, as well. Run Win 3.x or Win95 on a 16 MHz CPU if you have nothing else to do this week...

As far as hardware goes, an Adspeed STe by ICD will be easy to install.
If you have a 1040STe, simply pull out the CPU and replace it with
Adspeed STe. I'm sure the 1040STe had a socketed CPU, no
desoldering/soldering required.

Almost every issue of Byte that I read has a couple of ads for copy protection
hardware and/or software. On my 586 at work I have a dongle that has to be
attached to my parallel port in order to use film recording software.
Other platforms have _not_ moved away from copy protection, it depends as it
always does on the market for your software. How much software do you know
of does _not_ recquire a key/registration number? I can't think of any
except for windows, but that's because microslop wanted market share so
they 'practically' give away the OS. for example: Has Notator done away with
copy protection for the Mac/PPC or IBM? perhaps someone here could answer that
with more authority than I, but I would think that copy protection is still
alive for Notator.

Yeah, but here in Finland you can get a 16Mb 70ns long SIMMs for $100 US
and less. An empty SIMM board for Falcon cannot possibly cost more than 30
bucks.
After all, there's virtually no controller chips in a SIMM board (in Wing
there's none!).

That's why I'd like to get an unpopulated SIMM board.

>
>Well, you can still use these products, obviously. Re-launching Cubase
>isn't that big a deal, is it?

Yes, it is a big deal. His data is being put in jeopardy. This
was the very thing (presumably) he bought Cubase for. This
'feature' is interfering with that for which he bought the
program to begin with.

Unless there are specific faculties within steinberg products to
deal with the extra issues that their exclusively self-enriching
protection methods produce, then he is not being merely
inconvenienceed anymore but, damaged.

Without auto-save and disaster recovery features, it is the user
who is being damaged now. It is not apparent that these features
were added with the dongle.

A 30% chance of data corruption should not, ideally, be tolerated

>
>If you were Steinberg, what would you do? I'm curious..

If they were being equitable, they would provide features within
their softwares to aid in recovery from dongle problems, provide
replacement dongles for free & minimize down time implicit in
dongle replacement.

It appears that they have added an element that further increases the potential for data loss within their product without adding subsequent features to their product that would be needed in order to deal with the added 'inconvenience' their dongle provides.

J > Spectators: if you have the time to kill, by all means, go
J > back and look. If you find something beyond bald assertions,
J > buy all means, bring them to my attention. I would find them a
J > refreshing change of pace.

Oh, what the hell. :) Actually, I won't go backwards, but can I ask you a couple of things? Which of these do you agree & disagree with?

1. Some developers/vendors have sold _crap_ for software & support.

2. Using commercial software you have not purchased is wrong.

3. Using pirated software does not always hurt the developer of said software.

4. It's still wrong to do so, however.

5. It would be _real_ nice to be rid of software protection, esp. the more intrusive ones.

6. Updating or replacing commercial software that is no longer supported for someone who already own(ed!) it is probably a nice thing to do.

7. It is, strictly speaking, illegal to do so, however.

8. We users have to get a lot tougher with software developers/vendors, and demand to get the products & services we think we are buying.

9. Software protection a)never b)seldom c)often prevents the theft of software.

10. Essay: What is the outcome to the developer, re your responce to #9?

Well, there could be a lot more, but that's probably too many already! :) Thanks.

4037. Have you got this MOD ?

Newsgroup: comp.sys.atari.st
Date: 1996-09-05 00:00:00 UTC
From: Paul.Muehlbauer@flight.org
Message-ID: <f43_9609070406@flight.org>
Source record: 138487

EP> Actually, Paul, the courts have ruled that "sampling" a few
EP> seconds of sound, even for use in another commercial
EP> recording, is not a violation of copyright lwas (something
EP> about "substantially original work" comes to mind). Now, if
EP> Bon Jovi himself released a MOD file on CD and you were making
EP> copies of it, that would be piracy; but a snippet of sound
EP> here and there, all mixed together with /your/ MOD sequencing
EP> routines, is considered an original work;

I've heard lawsuits going both ways on that - perhaps it depends on the length of the sample used in your work. And, the judge you get. :) At least, I am familar with what you are talking about.

Of course, it doesn't have any relation to this case. The guy asked for (& I hope he doesn't take issue with me - I'm following up on this purely as a mind exercise, and don't give a hoot about his request - hope he finds what he is looking for! :) a mod file of a specific song performed by a specific group.

I suspect he could buy a CD of Bon Jovi, sample a couple of seconds, and mix it into his original work. No problem.

But, just how long is this mod file? Is it going to be used as a stand alone? Would it be the primary sound of a game opening, for example?

An archive of mod files of commercial music sounds like the equal of a BBS with software files from commercial software on it. I'm not seeing the difference here! It's like, well, I could then have the resource file of a commercial program on a BBS... :)

Thanks for the friendly discussion. I see where the NFL 'owns' the scores to it's football games, and so folks can't repeat these scores right away. Hum, a mod file of a commercially sold CD would seem to be a _lot_ more than just 2 seconds of sampling, or a bigger piece of the whole than, say, the scores of a football game.

EP> Law is wierd and wonderful...

I guess so! Unless you're the one getting trampled on, then it's not so wonderful! :) I'm not arguing with you, I just can't get it sorted out in my head, why one thing is evil & wrong, and the other is not... :) They seem equal to me.

TG> People are breaking the law all the time, sometimes without
TG> realising it, somethings such as videoing and sound copying
TG> has become such a matter of course that they forget, but still
TG> jump in with both feet if someone mentions copying software?

Kinda funny - since I'm a simple dirt farmer. Soybean, oat, wheat, &
other seeds have been developed for a _long_ time. Some are
developed by universities, & are in the public domain. Some are
developed by private companies, and are privately licensed. Now, you
raise the crop, but you can't save any of it & seed it next year...
Piracy is a very old thing. It's been in agriculture for over half a
century. :) Computer folks sound as if they have just discovered it,
& no one else could ever understand it... :)

It's wrong, of course. It's stealing. Even if an individual case
doesn't affect anyone in the pocket book directly, it's wrong. A
little odd that the music files are viewed differently from the
software files. But maybe I don't understand, since I am _not_ into
music. I'm assuming the mod file is long enough to get the substance
& feel of the music, and of good enough quality to be useful. Since
it is commercial, surely it is illegal to trade it? :)

Just the pointless thoughts of a simple dirt farmer...

That doesn't sound right? What version of Pagestream do you have? It is at 2.2 now. And sells for under $40, too!

But, anyhow, I've used Pagestream since about v1.6, and I don't remember seeing a hollow box pointer. Oh, wait, I think you are in the wrong menu? You may be in the text column flow area! That links text columns together, so the text flows from one column to another.

You want to be in the menu second from the right, near the bottom, it has a pretty nice text run-around set-up over there.

Ask some more, if I'm not making any sense.

>the STe having the Jag's ports as well, but...

I have a WICO-brand joystic labeled "AT5200" which I assume is for an
Atari game machine. ($1.00 at Goodwill)
When used on my old 520ST with "Silent Service" game it bombs it out.
Epyx jostick works great. Why isn't the WICO compatible?
It does have sliding switchwes on 2 sides that have no affect on the software
bombing. Also bi-directional "lock-free" sliding switches on bottom.
Anybody know if it can be made ST-compatible? or what it is designed
to work with. An e-mail note would be appreciated.

>I am running a 4 meg STE and am thinking of attempting to speed it up. These
>days it is used mostly for text editing and C++. Particulary I want to
>improve the screen display speed.

I think the nicest is the hardware accelerator T28.
It is a 68000 clocked at 28 MHz and the computer becomes fast
as hell. I've used it for a year before I bought a Falcon, and
I think my falcon is not as fast as the uphotted STE (only
if I run in monochrome). BUT don't forget to disable your blitter
in the meny and save the desktop, else the computer will hang all
the time. The blitter-chip cannot be clocked higher than 16 Mhz (or 8?).
You need to do some soldering so it is not easy to install.
You have to lift the ordinary processor (in STE it is in a keeper),
solder a wire for power (ground is easy and the + is taken from the big
condensator beside the power-circuit-board) and solder a wire to a switch
there you can switch between 8 MHz and 28 Mhz and to enable/disable the cache
for the accelerator (to get full compability).
Tomorrow I can post benchmark with T28 and NVDI if you are interested.

best regards

I know on the Mac there are dongles too that connect to the serial port. These dongles do have a pass-thru, but I've read that they have the same problem as the Atari dongles (ie they come loose, they aren't recognized sometimes, etc.)

I've noticed that the German companies (Steinberg and Emagic) like using hardware dongles, while the US companies (Passport, MOTU, etc) like to use the key disk method.

Either way, you're going to have to bring something around.

IMO, I still would rather have the hardware keys because they don't wear out like key disks. My Notator dongle hasn't given me many problems, and I swap it often with my Spectre GCR cart too. (Remember, this is just MY opinion)

Rich:

>It doesn't. 9-pin sub-D PC mount jacks are cheap. You could have
replaced
>it for under US$5 if you can solder even a little bit.

I hardly believe it, this had actually happened to me. Yes the ports themselves can be cheaply replaced, but disrupting the connection with unplugging the mouse a hundred times really ruins the whole keyboard. It even says so in ST Format. So I took it back to my dealer, and after a few days wait I got another one and is working ever since. Of course, the power and drive lights are all red and I'm looking to get those replaced with better colors. :)

P > What kind of memory chips go to Falcon Wing SIMM expander? I
P > have the impression that only 70 or 80 ns. 30-pin 9-chip SIMMs
P > will do, but as they are ridiculously expensive compared to
P > standard SIMMs, there must be some other solution also, it
P > there?

Try going with the three-chip SIMMs, which are less expensive.
I've got those running in my RAM Gizmo card, and have had no
problems with them. Besides, doesn't the FalconWing take a single
16mB SIMM, 72 pin? I asked my editor, Howard Carson, about this back
in May and he said that that was the case. (please, someone correct
me on that if I'm wrong)

P > Also does anyone sell Falcon SIMM cards (empty) for 72-pin
P > 70ns 16Mb SIMM?

What I do know is that Titan Designs sell a board designed for a
single 16mB SIMM, so you can try that.

I should also point out that chro_Magic currently has a deal
going on with their RAM Gizmo through Systems For Tomorrow; they're
selling a >populated< RAM Gizmo, complete with 14 megabytes, for
$199 US. That's a VERY good deal; about half what I wound up laying
out for my upgrade last May. The Gizmo is definitely a best buy, and
is practically idiot-proof to install and trouble-free to run - I
can't recommend it highly enough to a Falcon owner. You can get in
touch with them at 1-816-833-4738 (North American callers can take
advantage of this by using their toll-free number, 1-800-875-4943).

From: jagger@connexus.apana.org.au
Message-ID: <50mtgg$kjl@preeda.internex.net.au>
Source record: 138529

I've just purchased a Soundpool FA8 (8 analogue out hardware)
It only seems to work properly using the Graphic and chorus mixermap. When I try to use it with the reverb m/map, 1 or 2 channels come out the same outputs, nothing like the outputs that they are assigned to even though I have set up the busses and panning correctly. I'm using caf2.06 and soundpool's fdi initialise.prg 1.02, tos4.04 and a steinburg fdi box on a Falcon with 16 meg of ram.
Does any one have any ideas or mixermaps like reverb, that work. B-(
Thanx in anticipation.

>what sort of transfer to use (7-bit for "unknown" file types quite often,
>8-bit octet/stream for "known" archive types).

Only partly true. HTTP is a guaranteed 8-bit clean protocol, even when
sending plain text files. The issue is the content type that the
server declares for the document. If the server tells the browser that
the document has content type text/plain (the frequent default if the
server cannot determine the file type), the browser will --- indeed,
must --- treat it as a plain text file, and will likely do something
non-8-bit-clean with it, like displaying it in the browser window. The
problem is that most servers are not configured by default to recognize
ZOO files and mistakenly serve them out as text/plain; this can be
fixed by the system administrator, or, depending on the server and how
it is set up, by a per-user configuration file. For instance, ZOO
files served from my site are correctly served out as
application/x-zoo.

If you instruct the browser to save the file directly to disk instead of
displaying (as with Lynx's (D)ownload command; does CAB have such a
command?), you stand a very good chance of getting the file intact.

Yours is no better...

>
>This must mean that because Jaguar dont make E'types any more it must
>be OK to go out and steal one.

NO, it would be OK to go out and COPY one. This is a very important
distinction that your rant misses. It also falsely characterizes the
situation and adds to it elements that simple are not there. This
'analogy' is very loaded and distorting.

Theft of corporeal property would deprive the original owner of it's
use.

Theft of intellectual property does not. The original owner is quite
capable of using and re-selling his copy of the software.

This is how 'swiping' a terminal emulator is QUITE different than
stealing a terminal.

The differences between who is being damaged and how they are being
damaged are too great for your analogy to be useful.

You are trying to equate swiping of someone's entire package (which
would be corporeal theft) with swiping by copying only the intellectual
property.

This makes your entire cause look foolish.

>
>
>Yeah this is good, Triumph are now defunct are they not ? Great we can

>all go out and steal Triumph motor bikes...

Repeating of a BAD analogy does not make it any better.

The poster was advocating that is would be perfectly ethical in this situation to make an exact copy of the Triumph.

There is no good reason for this to be the case.
If intellectual property is the real issue, and you've
already bought the right to use it, then you should be
free to use that licenced property in any medium you wish
with without the further requirement to enrich
the copyright holder.

This is tantamount to not allowing you to copy a program
from CD (or floppy) to your own HardDrive.

Perhaps you should borrow some of our lobbyists? '-)

I haven't had the time, will nor energy to look into it again as I remember
that I had a *lot* of trouble when I installed it, experimenting with
different directories/partitions.
I'll probably get back to it later some time though.

I do remember that regardless of setting GEM environment variables (using a
program called "Environment.prg" in the AUTO folder) it only seemed to work
properly in one specific setup anyway :-(
I've heard others having the same problems as well.
Good luck!

Sorry to hear that.. I used to have that problem with Cubase on my
ST, but haven't had that problem on my Falcon. Yes, it certainly
is an inconvenience.

> I own Steinberg Pro12, Pro24, Cubase, and Cubase Audio - as well as FDI

Well, you can still use these products, obviously. Re-launching Cubase
isn't that big a deal, is it?

If you were Steinberg, what would you do? I'm curious..

When you boot up, try not to press any keys or mouse buttons. This locks up the keyboard and the whole system, this has happened to me a few times before I realised it.

If it still gives you problems, then do have it checked out by someone.

From: Aardvyrk@cris.com
Message-ID: <50n515$61h@herald.concentric.net>
Source record: 138541

Here's an update on the deal... (for those who are interested, like me)

I bought a null cable to attach to both serial cables. Same symptom.

I unloaded DRVIN and SCC. Ghostlink works fine without them (soft reset, so they might even have still been loaded) and I get the same symptom.

I tried one of the serfixes (2.0, tos 1.4 - 3.01) which bombed upon bootup.

I switched serial ports on the PC, com1 to com2, and tried different channels for the Falcon side. The Falcon will only work on channel 1.

I tried using various combinations for the channel one on the Falcon side. AUX port would only connect at 19200, it seems, and MODEM is what I've been doing. Still I can copy to the PC at 115200, but only receive at 19200. GRRRR!

This is starting to become a slight obsession. It seems that I won't try anything else on the computer until this is resolved, because it's one of those "It should work, I'm so close, What am I doing wrong?" sort of situations. So if one of the gurus cares to take a break from the copious versifications contained within the piracy threads (all 5-10 separate threads!), it should be interesting for me to attend the words of one who knows better than I.

Thanks again, from an

4075. Typical Atari users...

Newsgroup: comp.sys.atari.st
Date: 1996-09-05 00:00:00 UTC
From: rbipma@inforamp.net
Message-ID: <50n5j7$qfq@news.inforamp.net>
Source record: 138542

I noticed this newsgroup for the first time today and thought I'd take a look. Sorry I did. I'm now having trouble keeping food down. I'll never come here again, but what I saw begs for comment.

> Because most of this software is still being sold commercially. Just
> because Atari have 'laid low' on the computer side of things doesn't mean
> that Atari users have stopped supporting their Atari computers, and there

I really was going to stay out of this, but this comment just about made me shit my pants. "Laid low"? "LAID LOW"?!?!?!
Are you on crack? You call the pathetic state of the atari market over the course of the last (at least) 6 years "laying low"? You slay me.

That and a great many of the statements I've found in this group are so fucking sad, it's unbelievable.

The only people making much sense in this newsgroup are the ones who are being flamed heavily.

Typical atari users: wankers through and through. Your heads buried in the sand when you're not watching Star Trek of Monty Python movies. Pointing fingers in the wrong directions. All of you experts with no expertise.

Whoever said it was spot on: Atari abandoned the ST ages and ages ago. I bought one in 1990 (?) because I was interested in midi capabilities, a friend of mine had one and I could afford it. I soon realized my mistake.

Right from the get-go I realized that Atari was run by little better than trained monkeys. I had never in my life seen such examples of how NOT to run a company. No clue on how to manage inventory. No fucking marketing savvy whatsoever. This is a company that did not know their market - at all. Failed product offerings. I was and am floored by their business impotence. I used to believe that Atari was little more than a tax strategy employed by the Tramiels or whatever the fuck their names are to enable them to enjoy favourable write-offs. Their first run of luck with Commodore was just that - luck. It was difficult NOT to make money in silicon valley at that time. It caught up with them. I used to wonder just what the hell atari employees did all day. I often thought of writing a case on atari in one of my marketing courses of business policy courses. I've never seen such incompetence.

At first I couldn't understand why atari users bent over and took it from developers and atari. I remember my first shock at discovering that a great deal of software (mostly games) could not be installed on

a hard drive. And every once in awhile, Atari would throw you people a bone - a useless little trinket which you and atari 'publications' would immediately trumpet as the beginning of the turnaround for atari - wankers. Things like enhanced gdos and xcontrol were met with such excitement that I was blown away. I was like "what the hell is all the damned excitement over?". It's like watching commercials - it's so easy to tell that marketers have no respect for consumers - consider them to be braindead. Maybe they're right. I'm sure few of you people are insulted by commercials - they work on you. And just what the HELL was the STE? People creaming their jeans over an 'enhanced' (chuckle) palette of 4096 colours - only 16 at a time though...a thoroughly useless 'enhancement', but people lost their minds over it.

Now that I'm thinking about it, I remember getting screwed over huge by that fucker at Lexicor software. I bought their piece of shit package - the whole enchilada, chronos, prism, rosetta, umm....I can't remember what else it included, but I shelled out the bucks for it. It's my own fault really...I was younger then, and I was somehow under the impression that an atari could do 3d rendering and true colour painting etc. - actually, I already new st's were shit but I really loved 3d animation...
I remember the frequent crashes I got when running the software and the unbelievable rudeness I encountered when calling Lexicor for assistance. What's his name - Lees Seeler? - had the fucking tenacity, the utter lack of respect to blow off my concerns with the statement, "Well, software is very complex you know...you've probably got a flipped bit somewhere". Can you fucking beat that? I just about shat. Also, I remember one module of the software didn't arrive with my package. Instead I got some fucking cheesy certificate stating my copy of whatever it was would be shipped when it was ready.
Eventually, I was fed up and said as much. I was told to ship the software back with the dongle and get a replacement or something. I did as much and DIG THIS was later told that I would not get my software back! Lexicor stole my software from me!!! I paid, what? $500 for that piece of shit, and I got fucked hard. I think the story went that I owed them money for a tablet or some such thing...? I couldn't help but laugh when I heard this because I did not have a tablet. I had never ordered nor received a tablet. The software was paid for. It was much easier for them to fuck me than to make their shitty software work.

Shit....I should sue his fucking punk ass...

I let the whole thing drop because I realized the software would always be unuseable on an st (or TT) and there was no point. I just couldn't give a shit anymore because I had already devoted enough time money and effort to Lexicors bullshit. It didn't matter. But now that I think about it, it would be so easy to prove wrongdoing on Lexicor's part for several reasons. If had never ordered nor received a graphics tablet, then they would be hardpressed to prove otherwise!

Just an overly long example of how shitty things in the atari world were.

Understand this people: ataris aren't computers - they're oversized calculators, and not very good ones.

The only good thing about them is the built in midi ports (that's why I bought mine). I must admit that I feel safer running a sequencer on my st than on any 133 MHz pentium. Now a PowerMac on the other hand...

You people make me sick. Hanging on too passionately to a dinosaur. Pirating did not kill the atari. Whoever made the point that developers screwed people right out of the gate by assuming all atari owners are pirates, was correct. Atari and atari developers killed the platform. The platform was shit, that's what killed the platform. Don't give my your price performance bullshit. Beat the price performance of a wintel machine. Yeah, yeah windows is so far from the best solution, but you know what, the dos/win 31 combo still beats the shit ouf of tos/gem for usability and power. This statement is coming from somebody who hates Dos and Windows with a passion. The software industry is the only industry that doesn't really have to have working products. Computer users have come to accept buggy software as fair game, and as such companies like Microsoft make much money from that. Do you really believe that it is that difficult to write an operating system and user interface? With scads of the brightest and best software developers in the world at your command? I think not. The fact is that software companies don't make a great deal of money from perfect software. Buggy software leads to upgrades. Paid upgrades. Constant upgrades mean constant revenue streams.

Your complacency killed the atari and destroyed normal peoples chances at having a decent platform. You let atari screw you and said thank you very much on every occasion. We were the market, not atari, and you all forgot this. THAT killed your precious fucking platform.

Respect to the few voices of reason here and my apologies to you for my bile. The rest of you grow up and get a grip.

REAL hackers never do things the easy way. <G>

Seriously, cracked software often suffers from side effects of the crack;
hardware rarely does. IIUC, the Cubase dongle is a cartridge, so it could
be stripped down to the smallest possible size by removing the cover, and
soldered inside the 'puter directly to the back of that cart port edge
connector; put a switch on the +5v line (almost all digital/TTL chips are
high-impedence with the power removed) and you have a much more robust and
portable intallation ("portable" in the sense that you can pick up the
computer and move it with the dongle installed).

The drawback, of course, is that the dongle is going to be REALLY hard to
restore to normal if you ever decide to sell Cubase (unless you just sell
it with the computer).

The 5200 used analog joysticks, essentially identical to a pair of 2600-style paddles as far as the circuitry is concerned. The motherboard in a 5200 is almost identical to the 8-bit Atari computers in electrical terms. I don't think you'll be able to use the Wico at all on an ST, however. With an adapter and some driver software, you could use it (probably) on the STe extended joystick ports - they have analog capability.

>
>Please join in, everyone, if you know of more..

Well, let's start with ALL of the PC programs that require a sound card -
that's an extra-cost option for a PC, after all, and many of the
SoundBlaster utilities, for example, won't work with the ProAudio Spectrum
16, while to PAS16 utils won't work with the KISS Platinum a6, and those
utils won't work with the SB...

Young Mister Hughey speaks out of ignorance and arrogance. EVERY platform
has software that is specific to certain hardware. "Dongles" are the least
offensive method of enforcing copy protection that has so far been found.
They aren't perfect - but if all computer users were honest, they wouldn't
be necessary, either.

OTOH, if the guys who wrote Cubase had used the strongarm tactics (recently
ruled illegal, but now it's too late) that MS used to ensure their market
dominance, you wouldn't need a dongle; and an Atari ST would have cost
$1400 in 1986, instead of $700.

Sounds like the power supply may have gone wonky. That's typified by a system that worked fine when you shut if off, but won't come back up properly. Get a voltmeter and measure the voltages at the motherboard; if the +5v line (probably red wire) is less than 4.8v or more than 5.4v, that's a big problem; if the +12v line is dead, or much below 11.5v, your floppy may not be able to work (it depends on the particular drive mechanism in your system - Atari used Epson, Chinon, and possibly other drives).

This message from SBagley@cameo.co.uk to All came in on a wing and a prayer...

Hi Steven!

j>> I use NVDI 3.02 on a Falcon. I want to use the Save as IMG function
j>> so I can use Straightfax without rebooting with speedo for faxes. I
Actually I'm a little confused by this, having read this again surely the fix
is to put the STFAXSPD.SYS from the STFax prog disk into the NVDI
fonts/drivers folder and include it in the assign.sys file as an entry
between 21-30, the range reserved for printer drivers?

S> Yup. That is only for configuring the IMG Driver, the program needs to
S> select right driver for it to work, in this case I believe its 91, try
S> shoving the IMG Driver in the Assign.sys as driver 22, assuming that
S> Atari Works can cope with more than one printer.
Not quite right, the IMG.SYS driver needs to be entered as device 91 in the
assign.sys file, it can be selected as the output device by selecting it from
the Driver box at the top of the drivers CPX.

Best and easiest to use the STFax Speedo driver IMO.

Regards, Derryck

>thousand times before, and if so, I apologize, but I am really desperate.
>: (

I've not heard of this problem before. It's usually a case of install
and reboot. Couple of things to check though ...

1) magxboot.prg is 1st in the auto folder.
2) All other auto folder progs are disabled. Once installed, go
through enabling them one at a time until you find the culprit
(if there is one).
3) Ditto for accessories.
4) Use the default installation paths if at all possible. A
careful read of the manual allows things to be moved about but
its too complex until you've used it for a while.

hmm, thats 4 things. I can count sometimes.

> Hi!
> Does anybody know if KOBOLD is compatible with minixfs? Thanks in
> advance.

Yes, it is. If you run MiNT, Kobold will be able to handle minixfs partitions. But, set GEMDOS mode to be used on them. The reason why kobold is fast is that it works directly to the filestructure on the disk and not through any system calls. But with Minix you should use them.

Speedo GDOS has a similar driver. The problem at 600*600 DPI is that it takes forever over the parallel port. My HP 5P has a localtalk port and so does the Falcon. Is there driver that lets you use the localtalk port or is there any other trick for getting full pages under 2 minutes?

Hi friends: You may like to know that PGS2 does out put full
color photographic quality Postcript files.

I am doing a full color magazine for some one and had the
doubs about PGS2 color print out quality.

I used GhostScript and the 256 color out put to screen
is great. I will be sending the files to a printer
and it is nice to know that PGS2 can really do the job :)

4098. Is CueBase Audio VGA Only?

Newsgroup: comp.sys.atari.st
Date: 1996-09-05 00:00:00 UTC
From: mlw@Sunmuw1.MUW.Edu
Message-ID: <50lmsn$4r@NNTP.MsState.Edu>
Source record: 138605

I'm waiting on my Falcon to hit the door-step :)

I intend to use my old ST monitors till I can save up for a VGA.
In web browsing, I came across a url that stated VGA as a system
requirement for running Cuebase Audio on a Falcon. Is this
still true? I could swear I saw tons of Falcon set ups sold with
the old ST mono monitors specificly for running CueBase! Guess
I'll know for sure in a week or so...but if you've tried running
CueBase Audio in ST High, please post a follow-up as to your
experiences.

(Please reply as a follow up...not by email...borrowing fiance's account)

Thanks,
Brian

Well, it finally happened - I couldn't come up with any more excuses
and upgraded to a nice new Pentium System, complete with Gemulator.
It was difficult - I have been a die-hard Atarian since the 2600 first
came out. I suppose this is bad news to some (one less Atarian) but
there is some good news... I now have a whole mess of Atari stuff to
part with.

Terms:

Pretty much first come/first served with an eye to best offers and
package deals.

Purchaser pays all shipping charges.

I can't handle credit cards and would prefer money orders, but will
take personal checks (though I will wait for them to clear).

Feel free to ask for more details on any item - in general most things
are still in the original box/folder with manuals, though there are
some exceptions. A few of the items on the list are actually owned by
my father, and will be shipped by him when I tell him to.

Without further ado, the List:

Parts: D - Includes Disk(s)
B - Includes Original Packing Material
M - Includes Manual(s)

Mega Depack can be found on STFormat's cover disc number 50.

Alternatively AD LIB carry all STF's cover disc's.

The number for the AB LIB BBS is:- 0191 370 2659. You can then look it up
in the STF cover disc directory.

Regards

Robert Stead

:
: 8250's are not designed to do 115k...9600 TOPS...you need 16550 to do 115k

Rory,

Thanks for the reply. But like I said, the 8250 is indeed receiving at 115k from the Falcon, it just refuses to SEND 115k to me. I admit, this seems like a small quibble, but it would be really neat to get both machines at the same xfer rate. Color me egalitarian.

With the same 286 I have successfully LapLinked in both directions at 115k. Of course, the only reason that I claim I have an 8250 is because MSD.EXE diagnostics tells me so, usually with a baud rate of 49,798 (?) Also, another fine set of serial port utilities for the PC, CTSSPU, told me that it thought I had a 16450 or something like that, since [actual program output] "8250s have not been used for many years."

I've also had a 28.8 modem hooked up to it for a while, and have recieved and sent through it at upwards of 3000 CPS, which to me would seem to belie a fast link from the computer to modem, disregarding compression.

What I'm still wondering is whether there is one more option or configuration which I may have overlooked either on the Falcon or PC side, perhaps with DRVIN or SCC, though I've not noticed any difference when tampering with those progs, and, in the previous posts, I mentioned that those don't seem to be necessary to run ghostlink at a high rate.

Anyone out there with a mega, TT, or Falcon who has run ghostlink on a high speed link successfully with an older machine? Like a 286 with a cheesy 8250 UART?

Thanks again, and I hope the cars don't hit the

I> starship@3rdplanet.com says...
>>
>> ... obviously you don't know shit about what I did in the military,
>> ...
I>
I> You kept the largest monopoly of coercive force in business and
I> helped teach (if only indirectly) the young to kill and to blindly
I> follow.

Moron. Yes, that's a personal comment; it's my personal picture of who I am dealing with.

You clearly have never seen the East German border (and won't, now, thank all the gods). You've never seen a man torn to pieces trying to escape from his native country, which was turned into a wslave labor camp of incredible proportion. And you have no idea what I did, none whatsoever. What's more, the people who do know me, know what a sniveling, arrogant, ignorant puppy you are. You are absolutely, unequivocably wrong. Which is no surprise.

>> because you know quite well that "piracy is the same as shareware" is not
>> only specious, it's a silly position when analyzed rationally.
I>
<deletia>
I>
I> Shareware-piraty is perfectly ethical. If it is done as such,
I> NO ONE is damaged. It is NOT immoral.

There is no such thing as "shareware piracy." If a program is commercial, and you have a copy of it, either you bought it, or you stole it. There is no middle ground - no in law, not in ethics. Although you attempt to talk a good game, it is abundantly plain that you know nothing of either.

>> Kindly show me where theft shades into legal ownership and I'll agree
>> with you.
I>
I> When someone buys it because they like it, and delete it because
I> they derive no utility from it.

Cite statistics, please. Name me ten pirates who bought or destroyed every single commercial package that they ever obtained through piracy; name even ten packages that all of them tried and deleted within 30 days.

I> No direct damage is done to the copyright holder.

If I take a sledgehammer to your car, no "direct damage" is done to you, either (assumign you're smart enough to insure it against vandalism). That doesn't mean that someone isn't payign for that damage - the cost of insurance is higher than it need be because of vandalism. The cost of commercial software is higher than it might otherwise be because of the percieved level of piracy; it is probably higher than the actual level, but you can be sure that any vendor would rather sell 100 copies of a package at $75 then 10 copies at $600.

I> You called me a thief when I have never advocated stiffing
I> a commercial developer for software that you decide to
I> permanently keep.

Assuming I have misinterpreted your stance, for that I apologize.

>> Moral superiority doesn't keep burglars out of an unlocked house. Any
I>
I> A computer program is NOT a house. Any idiot can recognize that fact.

It's a METAPHOR, idiot.

>> /idiot/ can recognize that fact. And people who are normally honest

I>
I> Actually, my arguement was that 'piracy hurts X' is unjustifiable.
I> Most of the pirates I have known would not have been able to pay
I> for all of the wares they had. If they would have chosen to deprive
I> themselves of their 'collections', they could have bought a few
I> meagre packages (in comparison to what they had).

I don't think I quite follw all of that. What is quite plain from it, however, is that your pirates could not have purchased all of the software they "tried out." Thus, they obviously never /intended/ to purchase it. IF they had, they would have deleted all the things they had no intention or ability to buy.

Had they purchased what they could afford (assume it was 10 percent, jsut for the sake of a number to hang on the discussion), ther would have been a small but measurable increase in sales. Surely you won't dispute that?

I> IN the end, less unlicenced wares may be in circulation
I> but, the net gain will not be the great windfall that you

I> believe it to be.

I hardly expect a windfall. But in a market where there may be only a thousand potential customers, even one lost sale is important. That one sale can be enough to keep the developer interested or even solvent.

>> You neglected to define those circumstances at the time.
I>
I> This is a distortion. I define them once, THAT should have
I> been enough. Apparently, you weren't paying attention.

I have discussed my military career "once," yet you know nothing about it (except what has come out during this particular flame-fest). The rules you make up as you go along have to apply to everyone equally, sonny boy, or no one will pay them any attention.

>> The "available evidence" is that you are Steve Hughey (that may be
I>
I> I will neither confirm or deny your assertions.

That's adequate confirmation, actually. If I were terribly interested, I could check the enrollment record at OSU - they're public records. I'm not that interested, however.

>> How, pray tell, can causing lost sales make a
>> "better software customer?"
I>
I> THEY BUY MORE.

Let's see. Someone steals my horse, so I am better off, because they'll buy someone else's horse... Somehow, that makes raising horses all worthwhile.

I> As long that customer doesn't steal away other paying customers,
I> then the developers are not being deprived of any real, lost
I> benefits.

This is the point where you claim my argument breaks down - I can point to someone I know who didn't buy several packages because he was able to get them for free from a cracker. (I won't name names, I think he's reformed, but in any case, his victims are out of business now and would get no benefit from his punishment).

Can you point to anyone who purchased a specific package BECAUSE he was given a cracked version?

>> I have arrived at my current set of biases through experience, not by
>> worshipping at the feet of some ivory-tower pseudo-Marxist. You haven't
>> had the time to collect your own set of biases yet.
I>
I> Give em a few decades and they get so arrogant...

On the other hand, you've got a good 20 years head start. By the time you get to be my age, you'll be even more unbelievable than Wes Cooley, more self-satisfied than Bob Packwood, more self-righteous than Pat buchanan, if

you don't learn anything at all in that time. And, since you clearly know
everything now, I see no way for you to learn anything else.

Yes. Older Cabs stored stuff it could not understand on disk but did
so using an unknown filename in the cache unless you had an external
viewer installed for that file type. This is why I wrote SDCABPRG.

Newer Cabs look for an external viewer and if nothing matches, it pops
up a file selector for you.

The WWW131 package includes MG-FTP (1.03 I think); CAB stores everything in the cache, but if you get CacheEd, you can pull down the File menu, hit "Cache Tool" and save any/everything out of the cache back to "real" files with the original filenames.

Look at my bookmarks (listed below) to get both.

Two points:

One: The latest WIN95 and WINNT CDs require you to enter a key number (found on a cheap little sticker or on a fancy holgraph-engraved certificate on the CD slipcover/jewel box). What they neglect to mention is that any number will work. Typical M$ programming, they can't even make their copy protection work properly (and how many people copy CD-ROMs, anyhow?).

Two: M$ didn't "give away" Windozzze - they strong-armed manufacturers into including it for years, but you still paid for the product. Copy protection which works by ensuring that you can't avoid paying for the product even if you AREN'T going to use it is still very effective copy protection. US Courts ruled recently (within the past couple of years) that M$'s earlier tactics were illegal, but the damage had already been done. Joe Public now believes that MicroSloth is the only OS he can get for his Intel box.

No, Pentiums (and knowing our lovely gummit beancounters, the old and
admittedly buggy chips) as the CPU and ADA as the programming language.
Scary, innit?

Although we did use the ST under STOS as a Bradley simulator for about a
year. Then the boys in the Pentagon figured out that they could buy a
simulator the size of a semi-truck for only ten thousand times the cost...

The 8250 UART is unreliable transmitting at speeds above 9600 (19200 is
REALLY pushing that chip, but it usually works). However, assuming you
really want to try pushing it <G>, try a clean boot of Messy-DOS (no
config.sys, no auto programs, don't run MODE or anything else to goof with
the serial port, and DON'T run PCSLAVE in a Windows DOS window).

I'd definitely recommend considering the purchase of a 16550 serial card,
however. That is reliable up to at least 57600, and usually 115200 (at
which point, it's almost as fast as some older hard drives).

The MagicPC demo expired in August. I haven't been able to find a newer
one.

Thus, apparently, only people who have already bought a GEMulator or
MagicPC will be able to use the new GEMulator demo. A bit pointless, IMHO,
but that's life.

Yes, if you want something copied between a minix partition and a normal
TOS partition. Kobold still uses the fast method when using TOS
partitions.

For Sale - Atari 520ST - 512K RAM, w/Power Adapter, Mouse, 2 joysticks,
TOS 1.02
with:
1 - Color SC1224 Monitor (Version 2)
1 - SF354 360K floppy drive & power adapter
1 - Modified SF354 with 720K DS FD (drive case has a cutout) & power adapter
1 - Epson 360K bare FD (removed from above SF354)
all in good working order.

Also included:
Original Atari TOS System Disks & Manuals
Other Software: 1st-WORD, Atari ST Basic, DB Master One,
Atari ST LOGO, Neo, DBASIC, Flash (telecom S/W), Megamax C (w/manual),
Mathtalk ST, Microsoft Write (incl boxed manual), Degas (paint S/W),
Games include: Silent Service, Zork Trilogy, The Pawn, Universal
Military Simulator, Jewel of Darkness, Sundog, etc.
And about 50 disks of misc Atari software/shareware, games, etc.
(if you want them...)

$100 (plus COD & shipping costs, if not local)

>suggestions?

Richard,

First make sure the monitor isn't the problem. Does the power LED on your STe glow? How about the one on the monitor?

The STe's power supply has a built-in fuse which is supposed to protect the system from power surges and short circuits. That would be the next thing to check (unless, of course, someone has kicked the plug out of the wall...).

Since you have to have the cover off to check that, make sure all your SIMMs are properly-seated, too.

If the pilot LED glows, then the power supply is working somewhat; you need to check the voltages. The +5v line (probably a red wire, but it might be another color) should not be below 4.8 or above 5.2 volts. +12v should not be below 11.6 or above 12.4 volts.

If the voltages there are all OK, and you can get some other SIMMs, try them.

If you still ahve no luck, and you think the monitor is good, try hookign up to a TV jsut for luck.

If that also fails, you need professional help. Contact Toad or Computer Direct for a quote on repairs. See my web page (listed below) for their contact addresses.

Probably. Work has a Zenith 386 tank with 2 MFM (? MLM is
multi-level-markting, right?) drives that are very sssssslow and sound
like sandpaper on your cheek--wrong way, unshaven. Anyway, yeah, a serial
card can't be too pricey, but I'm kind of a stubborn bastard when it comes
to making something that I already own try to work, or else! You hear me,
card? <no reply from card>

Well, thanks. I just thought I'd try to push the limits of bronze age
technology... And here's where the thread ends, unless anyone else has an
addition. No? Well, G'night, ever'body!

Take a bow, you

4121. Atari Works questions...

Newsgroup: comp.sys.atari.st
Date: 1996-09-06 00:00:00 UTC
From: Steven Lapointe <outpost@cyberus.ca>
Message-ID: <32307A66.2DD0@cyberus.ca>
Source record: 138428

Hi everyone...

I recently set up my parents with a Mega 2, SLM804, and AtariWorks.

They have run into a few snags which I'm pretty sure are due to the version of either AW (the one I have is very early) or Speedo... The big one is that the program crashes completely whenever they try to print to the laser printer...

Question #1: What are the latest versions of this software, and where can I get updates?

Question #2: Is there anyway to deal with accents/foreign languages in AW? Have new versions been released that deal with, for example, the commonly used French accents?

I'd appreciate replies by e-mail at

outpost@cyberus.ca

as I rarely read the newsgroups anymore.

Thanks in advance for all help and suggestions.
Steve

4122. Cubase Dongle = Toilet Dongle

> I> follow.
>
>Moron. Yes, that's a personal comment; it's my personal picture of who I am
>dealing with.

However, my comments are still true. They are true regardless of how
poorly other nations treat their citizens or how beneficial you think
the american military is.

Even if my view is lopsided, the fact that you cannot deal with
the negative consequences of the machine shows how effectively
your perceptions were skewed by it.

[Disposable Heroism Deleted]

Soldiers not taught to kill and to blindly obey? What sort of
'Star Trek military' were you serving in anyways?

>

> I> NO ONE is damaged. It is NOT immoral.
>
>There is no such thing as "shareware piracy." If a program is commercial,
>and you have a copy of it, either you bought it, or you stole it. There is no

>middle ground - no in law, not in ethics. Although you attempt to talk a
>good game, it is abundantly plain that you know nothing of either.

I am still awating to see your moral basis.
All you can do is scream at me.
You are completely incapable of any real dialog on ethics.

>
> >> Kindly show me where theft shades into legal ownership and I'll agree
> >> with you.
> I>
> I> When someone buys it because they like it, and delete it because
> I> they derive no utility from it.
>
>Cite statistics, please. Name me ten pirates who bought or destroyed every
>single commercial package that they ever obtained through piracy; name even
>ten packages that all of them tried and deleted within 30 days.

The morality of a set of actions is not effected by the number
of people willing to carry them out. I also never stated that
this sort of behaivor was typical either. Your objection does
not address my point.

>
> I> No direct damage is done to the copyright holder.
>
>If I take a sledgehammer to your car, no "direct damage" is done to you,
>either (assumign you're smart enough to insure it against vandalism). That

Ah, yes: The a terminal program == a terminal analogy again.

>doesn't mean that someone isn't payign for that damage - the cost of
>insurance is higher than it need be because of vandalism. The cost of
>commercial software is higher than it might otherwise be because of the
>percieved level of piracy; it is probably higher than the actual level, but

Perception is a very important concept here. Perception does not
neccesarily equate to reality. Pirates inducing undue paranoia
into the minds of software developers is not a direct effect and
that alone cannot be used as a basis for determining that any form
of unlicenced software use is unethical.

This falls into the Damage vs. Potential Benefit fallacy.
The total retail cost of all pirated software will very likely
be significantly less (by orders of magnitude) than the
Potential benefit realized if all those pirates only bought
software and did so based upon thier percieved wants, needs
and economic resources. This is based upon limited economic
resources wrt capacity to pirate and the elastic demand
of computer software wrt cost.

>you can be sure that any vendor would rather sell 100 copies of a package at
>$75 then 10 copies at $600.

It is highly unlikely that the vendor would, in fact, sell 100
copies vs. 10. The vendor would be in competition with other
vendors for a share of a market that would be much more limited
than you realize.

damage != potential benefit

>
> I> You called me a thief when I have never advocated stiffing
> I> a commercial developer for software that you decide to
> I> permanently keep.
>
>Assuming I have misinterpreted your stance, for that I apologize.

>
> >> Moral superiority doesn't keep burglars out of an unlocked house. Any
> I>
> I> A computer program is NOT a house. Any idiot can recognize that fact.
>
>It's a METAPHOR, idiot.

It's a BAD metaphor.

A lock on your door enriches YOU, not the builder.

A dongle is more like a lock on your toilet put there
by the toilet maker to keep people from infringing on
his patent.

If you loose your toilet dongle at a bad time, you'll
be in a world of hurt without any real benefit you
yourself.

Your toilet dongle may also come loose in the middle
of a crap leaving you with crap all over your behind
as the toilet slams shut.

My metaphor more properly captures the essential elements of the issue.

>
> >> /idiot/ can recognize that fact. And people who are normally honest
> >> will often steal when they feel they stand no chance of being caught, and
> >> when
> >> they don't think the person or business they are stealign from will be

> I> meagre packages (in comparison to what they had).

>
>I don't think I quite follw all of that. What is quite plain from it,
>however, is that your pirates could not have purchased all of the software
>they "tried out." Thus, they obviously never /intended/ to purchase it. IF
>they had, they would have deleted all the things they had no intention or
>ability to buy.

It wasn't an attempt at a moral example. It was a statement of
reality. Most of the Atari pirates I knew had less spending
power than might be implied by their computer purchase.

Taking their collections away would not have had much real as
part of their motivation was that they didn't have that much
to spend to begin with.

The 'value' of their 'collections' (refered to as X above) were
substantially greater (10x,100x) than what they would be
capable of buying if they did not pirate at all.

>
>Had they purchased what they could afford (assume it was 10 percent, jsut for
>the sake of a number to hang on the discussion), ther would have been a small
>but measurable increase in sales. Surely you won't dispute that?

A few vendors would have benefited. The rest would still get
squeezed out of the market and still call us all theives on
the way down.

>
> I> IN the end, less unlicenced wares may be in circulation
> I> but, the net gain will not be the great windfall that you
> I> believe it to be.
>
>I hardly expect a windfall. But in a market where there may be only a
>thousand potential customers, even one lost sale is important. That one sale
>can be enough to keep the developer interested or even solvent.

As I said before: this is a problem of the market in question.
This problem is solely the fault of Atari Corp. The ST market
never should have been so small that a 10% increase in sales
would be so significant.

[deletia]

>
>Let's see. Someone steals my horse, so I am better off, because they'll buy
>someone else's horse... Somehow, that makes raising horses all worthwhile.

Another instance of the Terminal Program == Terminal Fallacy.

Unathorized distribution of software incurs no direct cost
upon the developer.

>
> I> As long that customer doesn't steal away other paying customers,
> I> then the developers are not being deprived of any real, lost
> I> benefits.
>

Hi! I am just wondering what could have happened to my STe. I was running it then I exited FZT-Term (demo) and then it wouldn't give me the directory I have setup on my desktop (TOS 2.06). Then I just pressed the reset button on the back and it came back with 4 bombs. I then turned off everything and tried to re-run it. There is NO POWER to my STe what so ever. It doesn't turn at all, even with the on switch on. Any suggestions?

this too.. it seems he won't admit his errors, but that's OK.. it's
what I expected from someone who wants to engage in a serious discussion
while hiding his true identity.

4126. Bloated Code; the ultimate copy protection

Newsgroup: comp.sys.atari.st
Date: 1996-09-06 00:00:00 UTC
From: cj439@FreeNet.Carleton.CA
Message-ID: <50pd44$bi6@freenet-news.carleton.ca>
Source record: 138433

MicroSlop has devised the ultimate copy protection; the OS and the APPs get so huge that only the latest, biggest fastest machines will run them. Do they have a sweetheart deal with the hardware manufacturers? I can't prove it, but I suspect it. You can steal Win95, MS, NTel, etc. come out ahead for it, and you'll have to buy Win97, 98, 99, etc., in hopes that they'll have worked out the bugs. You'll also have to buy a terabyte hard drive, and gigabytes of RAM.

Most Atari programs will run on 1 Meg of RAM, and will limp by on 1/2 Meg. Hooray for the design team and software developers who created and supported "windows" '85!

4127. CAB problem driving me crazy

Newsgroup: comp.sys.atari.st
Date: 1996-09-06 00:00:00 UTC
From: Martin.Byttebier@ping.be
Message-ID: <842129670_OASIS_@ping.be>
Source record: 138434

Most of the time CAB 1.31 works fine, but I've some serious problems with particulair sites. I'm unable to browse to some sites graphical. When I browse to such a site the graphics (gif's and jpg's) aren't downloaded correctely which results in a runtime error when CAB tries to convert the images. Visiting these URL's textual gives no problem. (viewing these particular sites graphical with Chimera gives no problems either)

Examples of problem sites are
-all the homepages placed on http://www.club.innet.be, including the page I've made for a Belgian Aquarist club. This means ofcourse I can't see my own baby. That's why this problem drive me really crazy.

-home page of Alexander Clauss
http://www.student.informatik.th-darmstadt.de/~aclauss/

Is this a bug of CAB or what?

BTW I'm using CAB 1.31 under Mint with the cab.ovl v1.77 and N.AES on a TT

>tasks that are done in TOS programs every day. Example: Win95 requires

True. However, you are glossing over one very important fact. Those
obscene resources can be had for much less than any Atari machine
or Atari clone (excepting the STe).

>about 80 megs of hard drive space just to INSTALL (and still have room left
>over for any other software) and runs like a one-legged dog in less than 8
>megs of RAM or on a CPU at any speed below 66 MHz. The TOS desktop in a

You'll be hard pressed to find any contemporary system shipping with
less than 100 Mhz these days. Furthermore, new systems typically ship
with 16Megs or more (retail channel) and some ship with as much as
32Megs.

>Falcon lives in less than 2 megs of ROM, takes less than 4k of hard drive
>space, and can comfortably operate in 4 megs of RAM with an 85 meg hard
>drive. This is on a 16MHz CPU, as well. Run Win 3.x or Win95 on a 16 MHz
>CPU if you have nothing else to do this week...

Add sufficient RAM and it shouldn't be a problem. Many cloner hackers,
apparently, have discovered this to be the case. Furthermore, 16Mhz
Clones and Macs can be had in abundance for as little as $200. One is
hard pressed to find a single Atari of ANY kind anywhere.

Hell, Toad is STILL advertising $400 bux for an STe... 4 years later...

One may find an old 8-bit at a thrift store however.

Furthermore, a cloner would not need too. For half of the apparent fetching price of a Falcon, one can get a 120Mhz Pentium w/ 16Megs & a 1Gig HD.

Cut throat price competition can be a genuine benefit when compared to stagnation and obscurity.

Unless you are within some rather restricted niche market, the Atari's austerity benefits have been neutralized by platforms that , while being bloated and relatively inefficient, at least progress. All Atari can come up with is vapor (as always).

> program to begin with.

Actually, you are, once again, displaying your ignorance. Cubase looks for the dongle upon launch of the program. If it can't find it, it doesn't let you run the program. I've NEVER had, nor heard of anyone else having, data loss as a result of a dongle on Cubase. If I'm not mistaken, I believe Cubase ONLY looks for the dongle upon starting the program.

> Without auto-save and disaster recovery features, it is the user
> who is being damaged now. It is not apparent that these features
> were added with the dongle.

> A 30% chance of data corruption should not, ideally, be tolerated

You are correct that a 30% chance of data corruption would not be tolerated.. I wouldn't stand for it!

But, again, you are incorrect in your assumptions.

> If they were being equitable, they would provide features within
> their softwares to aid in recovery from dongle problems, provide
> replacement dongles for free & minimize down time implicit in

>
> It appears that they have added an element that further increases
> the potential for data loss within their product without adding
> subsequent features to their product that would be needed in order
> to deal with the added 'inconvenience' their dongle provides.

Again, you are basing your whole argument on your lack of information about the product.

Will he admit his mistake? Will he start to use his real name?
Will he find a pirated copy of Cubase? Tune in next time to..

As the stomach turns! Same time tomorrow, on this station..

:)

The Dragon Reborn wrote this to All about Typical Atari users...:
TDR> I really was going to stay out of this, but this comment
TDR> just about made me shit my pants. "Laid low"? "LAID
TDR> LOW"?!?!?! Are you on crack? You call the pathetic state of
TDR> the atari market over the course of the last (at least) 6
TDR> years "laying low"? You slay me.

Actually, Atari isn't around any more - and that's a good thing, since they've always been around to screw things up...

TDR> The only people making much sense in this newsgroup are the
TDR> ones who are being flamed heavily.

Are they making sense?
By defending pirating, they make people realize what kind of persons they are.
Piracy is always theft and always will be.

TDR> Typical atari users: wankers through and through. Your heads
TDR> buried in the sand when you're not watching Star Trek of
TDR> Monty Python movies. Pointing fingers in the wrong
TDR> directions. All of you experts with no expertise.

This remark just makes me laugh! Get real - if people want to use a certain platform, let them. They obviously like using the computer they use, or they would have changed to another platform already.
Besides - what's YOUR expertise on the matter?
My own expertise is by using and professionally repairing Atari, Amiga and PC for about 9 years. I've always been able to choose which computer I want and I've always chosen Atari, since it's always been best for what I've wanted - and still is!

TDR> Whoever said it was spot on: Atari abandoned the ST ages and
TDR> ages ago. I bought one in 1990 (?) because I was interested
TDR> in midi capabilities, a friend of mine had one and I could
TDR> afford it. I soon realized my mistake.

What's the mistake? Try to run Cubase Audio on a PC with a soundcard that doesn't cost you a fortune and you'll loose the midi timing in no time, as well as the sync between audio and midi.
That doesn't happen on an Atari Falcon.

TDR> I remember my first shock
TDR> at discovering that a great deal of software (mostly games)
TDR> could not be installed on a hard drive.

That's very sad, but true - but who needs games ;)
There are still very many Atari-users that don't have a harddisk, since it's

not vital for all uses (like it is for PC's) and I don't think they mind that much...

TDR> Things like enhanced gdos and xcontrol were
TDR> met with such excitement that I was blown away. I was like
TDR> "what the hell is all the damned excitement over?".

Since you didn't understand the excitement, you obviously lack any experience with Atari computers...

TDR> It's like
TDR> watching commercials - it's so easy to tell that marketers
TDR> have no respect for consumers - consider them to be
TDR> braindead. Maybe they're right. I'm sure few of you people
TDR> are insulted by commercials - they work on you.

Do you assume people that use a different platform than you are fools? The people still using ST's like their computers and can't see the need for getting another, more expensive one - like you obviously have.
This newsgroup isn't intended as a platform-war group, so keep this kind of a discussion in the right place and not here.

TDR> And just what
TDR> the HELL was the STE? People creaming their jeans over an
TDR> 'enhanced' (chuckle) palette of 4096 colours - only 16 at a
TDR> time though...a thoroughly useless 'enhancement', but people
TDR> lost their minds over it.

Somewhat like the Amiga 500/500+ then...
Remember that this was at a time that PC's hardly knew there were more than 16 colors, so don't compare them with the graphics cards of today.

TDR> Understand this people: ataris aren't computers - they're
TDR> oversized calculators, and not very good ones.

They are capable of enough things to keep many of their users. Why do you complain? Haven't you got a - in your eyes - better computer?
And as I said before - this is no computer-war group...

TDR> The only good thing about them is the built in midi ports
TDR> (that's why I bought mine). I must admit that I feel safer
TDR> running a sequencer on my st than on any 133 MHz pentium. Now
TDR> a PowerMac on the other hand...

I've got a friend who has tried to use Cubase Audio on his Mac for over a year now, and he told me it was very buggy and died down all the time, until a couple of months ago. Then suddenly it started working better...
I've been using my Falcon with Cubase Audio for 2 years now, and it's worked perfectly since the day I started using it.
I believe you're bright enough to make a conclution out of this yourself...

TDR> You people make me sick. Hanging on too passionately to a
TDR> dinosaur.

What other "dinosaur" manages 16 audio tracks with the best sequencer program available?
Mind you that "Atari computers" aren't only the old ST's, but also the new clones, like C-lab Falcon, Medusa, Hades and some more that are about to be released from Wizztronics.

TDR> Beat the price performance of a wintel
TDR> machine. Yeah, yeah windows is so far from the best solution,
TDR> but you know what, the dos/win 31 combo still beats the shit
TDR> ouf of tos/gem for usability and power. This statement is
TDR> coming from somebody who hates Dos and Windows with a
TDR> passion.

Obviously you haven't run windows enough to realize the advantages of TOS. I know that it's very much a matter of taste, but I like TOS much better.

TDR> The software industry is the only industry that
TDR> doesn't really have to have working products. Computer users
TDR> have come to accept buggy software as fair game, and as such
TDR> companies like Microsoft make much money from that.

This is one of the few things in your mail that makes sense - but it doesn't apply to Atari machines only, but to ALL computers. As your argument has been to put down Atari machines, I can't realize why you suddenly make this remark.

TDR> Do you
TDR> really believe that it is that difficult to write an
TDR> operating system and user interface? With scads of the
TDR> brightest and best software developers in the world at your
TDR> command? I think not.

Not when it comes to PC-programs, but Micro$oft knows they've got a grip on the market, so why should they care? They even make you pay if you want to give them a bug report, since they claim there are no bugs. If your alledged bug really is there, you get the money back. This is why they don't have any bug-reports of Windows-95.
Scary world, isn't it?
Atari developers listen to the users much more and they welcome your bug-reports and try their best to fix the software.

TDR> The fact is that software companies
TDR> don't make a great deal of money from perfect software. Buggy
TDR> software leads to upgrades. Paid upgrades. Constant upgrades
TDR> mean constant revenue streams.

Many Atari programs have free updates (bug fixes), but when it comes to big upgrades (with more and better functions) you have to pay for them.

TDR> Your complacency killed the atari and destroyed normal
TDR> peoples chances at having a decent platform. You let atari
TDR> screw you and said thank you very much on every occasion.

Just like you thank Bill Gates for Windows...

TDR> We
TDR> were the market, not atari, and you all forgot this. THAT
TDR> killed your precious fucking platform.
TDR> Respect to the few voices of reason here and my apologies to
TDR> you for my bile. The rest of you grow up and get a grip.

I've decided to stay with the Atari line of computers as long as they do the job that I need them for. I must say that your vocabulary isn't too good - you use very foul language throughout the letter, so I guess it's you who should grow up...

Regards,

Claes

BL> initialise.prg 1.02, tos4.04 and a steinburg fdi box on a
BL> Falcon with 16 meg of ram. Does any one have any ideas or
BL> mixermaps like reverb, that work. B-(Thanx in anticipation.

It should work without any problems, but check which output the reverb is set to - you can only get it out of one stereo pair and the reverb for all tracks is mixed to that output.
This means that in default setting, you send the reverb output to output 1, which is the same as the audio tracks 1 and 2 come out of.
I believe that the best way to use the reverb is to use output 4 for the reverb and have the other 6 channels (output 1-3) for clean audio. This way you can blend in the reverb in your mix using an external mixing console.
To be true, I don't use the reverb, since I have external effects that sound much better and it's easier to use the mixing console's effect send/return for this - then you can use 8 separate track outputs from the FA-8 instead.

Best regards,

Claes

4136. Wanted Atari ST WP

Newsgroup: comp.sys.atari.st
Date: 1996-09-06 00:00:00 UTC
From: chrish@spuddy.mew.co.uk
Message-ID: <DxB703.E55@spuddy.mew.co.uk>
Source record: 138443

Hi,

Can anyone point me in the direction of WP software for the Atari ST available on disk (Pref shareware/cheap, pref UK).

A friend of mine has recenly aquired an Atari ST and has no disks or manuals he would also like to connect an electronic keyboard to it via the MIDI port.

I beleive the OS is in ROM so he doesn't need OS disks, is this correct.

If anyone out there has time to answer a newbies questions or can point me to an ST FAQ i'd be gratefull.

Thanks for listening

Chris

MM> the ports themselves can be cheaply replaced, but disrupting
MM> the connection with unplugging the mouse a hundred times
MM> really ruins the whole keyboard. It even says so in ST
MM> Format.

In that case, ST Format lies...
In my experience - about 9 years as a hardware technician on Atari, Amiga and
PC computers - I've NEVER had to exchange a whole keyboard because of
"worn-out" joy/mouse ports.
The only thing that has to be done is to re-solder the 9-pin connector and then
it will work for a couple of years more - until the solderings crack again...

Best regards,

Claes

Michael A. White wrote this to All about Falcon MK-X:
MAW> Anyone out there using the new Falcon MK-X? I'm considering
MAW> one, and would really value people's opinions.

The MKX is exactly the same computer as the "normal" Falcons, but in a desktop case with separate keyboard instead of the old 1040-case. You get some space inside the case for a harddisk and you can also build in an S/Pdif interface or an ADAT-interface, as well as one extra 3.5" unit in the front (like syquest 270MB or Iomega Jaz).

MAW> Also, any word on any '040 boards for the Falcon? I called
MAW> Toad, and they said try calling them every couple of weeks.
MAW> Anyone have anything better than this?

AfterBurner is available and according to the magazine "The Mix", so is the Barracuda. I've sent a fax to Wizztronics to check it up, but haven't had an answer yet...

: I've been fighting it too, but it says it's having a problem finding the right
: font, not the font path. (Already got the environment working!) ;^)

Are you running it from the F: partition? If not, how did you get it
running? I had it running, but recently toasted the majority of my hard
drive messing around with re-writing parition info. (Doh!) Anyway, I'm
taking the opportunity to re-arrange my hard drive, and it looks like F:
is going to be a MinixFS partition, and I want to have GS on E:,
preferably.

If GS is complaining about not finding the right font, check the fontmap
file. There's likely a font name pointing to a non-existent font file.
You can either get the font (although I don't know from where), or
probably delete that line in the fontmap, and get the default (ugly) font.

Such as scrolling speed shall always be between this many and that many pages/frames per second, keyboard/joystick will be polled only at a certain rate, if the processor is a 68030 or 40, if the clock signal is at this rate, cut by 50%, etc.? I am not an active programmer so I don't know if this is possible, or if I should be writing this is in c.s.a.p! :^)

You have a GEMulator but you're not selling ALL you Atari software, are you? If I owned a MAC[PPC] running MagicMAC, a very good reason for doing so would be _not_ for the Mac, but for an accelerated Atari! I like my software, and it's as good as anything on the Mac (or IBM for that matter). The only thing I don't understand is running GEMulator on all that overhead Windows imposes, I'd think it would be *much* faster running closer to the hardware (say DOS?) :^)

As far as I know Afterburner is for sale. Buy direct from TITAN design at
6 witherford way
Selly Oak Birmingham B29 4AX
ENGLAND
phone +44 121 693 6669 fax +44 121 414 1630
email 100345.2350@compuserve.com

btw, David Encill sent me this on 16/8/96
"We have new stock arriving next week, but only have one left - the rest are pre-ordered. Cost in the UK is #539 (these are the full 'RC' versions), but take tax from that and the export price is #459. Believe the exchange rate is about 2.2:1 (?), so about $1,000 is right."
I'm thinking of it also. But I am closely watching to see whether Georg Acher's FalconFX card gets a memory boost or not. That would be an interim option, but would delay Afterburner purchase.

: never come here again, but what I saw begs for comment.

[Deletia]

: Understand this people: ataris aren't computers - they're oversized
: calculators, and not very good ones.

You really have no idea, do you? Computer ARE oversized calculators.
MS-DOS machines ARE bean-counters. Atari's appeared as a personal
computer with sound, graphics, and musical capabilities. PCs have finally
evolved to this point, but it took a very long time.

: The only good thing about them is the built in midi ports (that's why
: I bought mine). I must admit that I feel safer running a sequencer on
: my st than on any 133 MHz pentium. Now a PowerMac on the other hand...

Clearly you are misinformed. I have a PowerMac and it is almost as stable
as a house of cards. It has recently been completely wiped and
re-installed; yet, crashes and lockups occur as frequently as every five
or ten minutes - generally at least once an hour. The Mac has some very
nice software - Pagemaker, Photoshop, Pagemill, etc... but it is not
altogether superior to an Atari Falcon.

: You people make me sick. Hanging on too passionately to a dinosaur.

People like you make me sick - accepting whatever crap is thrown at you
and being content with it. If you want to insist that all platforms suck,
that is fine with me - but don't point at Atari computers, because in
spite of the ineptitude and lack of funding that backed them, Atari computers
emerged as an amazing anomoly. Atari Computers are dated now, but many
computing tasks are still much more efficiently handled by my Atari.

Most Atari enthusiasts are people that simply wishing for something better
(and have been for quite some time). I chose Atari because the other
platforms were either extremely bad or extremely expensive. These have
changed to some extent, but not completely. I will happily switch my
computing to another platform, as soon as something that meets my needs
happens along. Until then, my primary computer will be an Atari.

By the way, in addition to my Falcon, I have a PowerMac 6100 and an Aptiva
with a Pentium 166 - what is your basis for comparison?

: platform. The platform was shit, that's what killed the platform.

No, having a computer industry that is directed by which computers are used in business (for bean-counting) is what killed the platform.

Microsoft killed the platform, and all innovation in the computer industry for that matter. I believe it was the FTC that issued a statement when blocking Microsoft from assimilating Intuit Corp. indicating "this would further lessen innovation in the software industry". Even Microsoft employees have gone on the record stating that the computing industry is 5 years behind where it should be. Steven Jobs (formerly of Apple) has also publicly stated similar sentiments.

: Don't give my your price performance bullshit. Beat the price
: performance of a wintel machine. Yeah, yeah windows is so far from the
: best solution, but you know what, the dos/win 31 combo still beats the
: shit ouf of tos/gem for usability and power. This statement is coming

No, it doesn't, not even a little. Dos machines are good for one thing - GAMES. PCs with Windows 95 are reasonably usable given appropriate horsepower and hard disk space. Windows 3.1 is useless, unstable, and generally crap. Tos/Gem is much more usable, efficient, and stable than Windows 3.1, and I have _never_ had to re-install TOS. TOS also doesn't get viruses since it is in ROM.

Right now, for my own money, if I were to buy another computer it would be an IBM Aptiva, precisely because it is so much like the Atari Falcon, albeit quite a bit faster. Of course this is necessary because it has to wade through Windows 95. In any case, it has multiple processors to handle different tasks, a fairly standardized and comprehensive design, and it wasn't designed to count beans. Unfortunately, the really useable model (C77) costs about $3300. I suppose that I don't need to play games that badly.

: Your complacency killed the atari and destroyed normal peoples chances
: at having a decent platform. You let atari screw you and said thank
: you very much on every occasion. We were the market, not atari, and
: you all forgot this. THAT killed your precious fucking platform.

Your complacency has allowed the inferior platform to become the dominant one. Mac, TOS, Unix, anything but Microsoft - I won't stand for it, and you will.

: > and FA-8. I deserve to be able to use these products without fail. I
: > have paid my dues, and I AM INCONVENIENCED.

: Well, you can still use these products, obviously. Re-launching Cubase
: isn't that big a deal, is it?

No - I don't think you understand... When Cubase decides not to run, it won't run no matter how many times I attempt to launch the program, no matter how the cartridge is seated, no matter how clean the contacts on the cart, no matter what prayers or medicine dances that I might happen to be doing. Some days, the stars just aren't in line or something, and the dongle doesn't function. I don't complain too much about the Dongle for Logic, since it adds 4 MIDI outs and a cartridge pass-through port - but a dongle that does nothing for me except provide headaches and frustration?

: If you were Steinberg, what would you do? I'm curious..

If I were Steinberg, I would lower the price so that people might actually be able to afford the software. I am a firm believer that piracy is largely due to overpriced software. People certainly wouldn't go to the record store and pay $100 or $500 for the latest Madonna CD, but plenty of people do pay $15-20. If Cubase was $100, Steinberg would probably sell 10x the volume, and many more people would be happily using their software and looking forward to shelling out some clams for the next upgrade or additional products. These people don't understand that most people cannot afford $300-600 for a program, but will gladly spend $500 on ten programs. Would you rather spend $70 on one program, or $100 on four?

Hmmmm... perhaps I should upload the package to my FTP area. By the way,
what exactly does "Fserial" do? I understand it has something to do with
the serial ports- is it something like "RVSE", "38400bps" etc. which
increases the serial port speed?

(I've got the package here, but like you say it's all in German and I
haven't had the time to study it in detail yet).
I'd like to know what it's for before I upload it ;-)

[lots of aggrevation deleted]

I can agree with you about the part of Atari's management and treatment of
us customers (I haven't heard of one person who's said anything good about
Atari- the company).

But.... the machines on the other hand are another matter entirely.
Macs and PCs might be a lot more advanced _now_, but "back in the days"
when I was out to buy a new computer (I had an Apple II+) Macintosh
computers were prohibitively expensive, PCs were dinosaurs which ran the
rather cryptic MSDOS which left the Atari ST as the most attractive machine
you could get for money, especially for MIDI use as my foremost reason for
buying a new computer was.

I have to admit that the ST is quite an "oldie" these days, but so what?
It works for me and many others as well!
It gets down to this:
Question: What is a computer?
Answer : A tool- used to perform a specific task/tasks.

And that's exactly what I'm using it for- to perform specific tasks, which
I must say it does very well without having to spend a fortune on memory
expansion, waiting an eternity for the system to kick in, and not having to
reboot in the midst of my work because the machine locks up!

Whether you go for the ST, the Mac or PCs is your business- I couldn't care
less, but to enter a newsgroup for Atari ST users and starting to criticize
us for our choice is right down inappropriate behaviour. Go away!
We're here to help each other out, discuss hardware/software problems,
ideas etc. So go back to whichever group caters for your needs and leave us
alone.

Tony Greenwood (stosser@airtime.co.uk) wrote:
: You missed quoting the original post that said other platforms would
: be suprisingly helpfull, that was the reason I posted my views,

Sounds like what I posted. Actually, I am not sure if users of other platforms (that read their Usenet groups) would be "surprisingly" helpful. Since Atarian's have always been very helpful, I just figured that others would be also. I have had an ST since early '85 and have always participated in users groups, platform specific BBS's and Usenet. I have never failed to get a quick and positive response from the Atari "group".

It has been a little demoralizing following this advocacy thread as there has been a lot of very negative baiting from "other platform" people. I always thought that the likes of Gary Kildale (GEM) and some of the excellent programmers at Atari (TOS) and the great programmers that wrote for the ST (SoftLogik's PageStream, Dr. T's Omega, and don't forget OID's!) really brought the PC into the moderm world. I am sure Microsoft and Apple drooled a little when the ST came out .. just guessing on that one! Oh well! There will never be another machine so well put together, tightly programmed and feature packed with what little it had inside. That is for sure! Adios!

ATARI external hard drive priced to sell FAST!

ICD FaST Hard Drive (fast 105Mg Quantum drive inside) The unit is a very high quality dual hard drive case by ICD with an ICD adsci plus host adapter inside. It can be placed under your monitor and even has front adjustable legs to tilt the case. A second SCSI drive can easily be added inside. Icludes all ICD software and DMA cable. It is already set up to be bootable.

A great unit and I am asking only $95 for it!
(plus shipping)

Please send me email if you are interested at RJRe@AOL.COM

: Now if we can get them to release the code for Doom, then get it to link to PCs...

: Do you write shareware or commercial software (other than for companies like
B
B
B
: Interplay)? As far as Interplay goes, they'll probably never publish it, but maybe
: you could work up an agreement where you could do a low-budget release and give them
: a cut. That way they spend no money and you both get a little out of it.

: Dan

Anything I write tends to be freeware. I just like to program. The reason
I'm actually doing Neuromancer is that it's my favorite game, and when I
saw the Laser demo, I said, hey! I could write a game that looks like that.

So, I started doing that. The Wolf-3D for Ataris is intended to be freeware,
(in fact, I think that to use Wolf code, it has to be.)

4163. FS/T: Atari ST games [09/06/96]

Newsgroup: comp.sys.atari.st
Date: 1996-09-06 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <50otak$1bo@sjx-ixn5.ix.netcom.com>
Source record: 138505

If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it). Also, please be sure to read the entire message carefully before you ask me any questions. This will save us both some time. Thanks! -- MJN

*****

All VGA FS/T lists are updated weekly and are available on the WWW at http://www.io.com/~vga2000/

This list was last updated on 09/03/96

I have the following Atari ST software for sale or trade.

Unless specified, all items are *NEW* and are still shrinkwrapped.

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3 for the first item and $1.25 for each additional item, unless otherwise listed. If you order enough items I can weigh the order as a package, which might reduce the shipping costs.

Large orders will be weighed as a package, to reduce shipping costs.

SALE CONDITIONS:

1) Sales are first come, first served. Please include your full postal mailing address in your reply.

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be given priority (especially if the trade offer overwhelms me). I collect for over 40 different systems, so please feel free to send me a trade list. Ask for my want lists!

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money order, drawn from a U.S. bank branch. Orders from outside the U.S. are also accepted.

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

SOFTWARE:

ATARI ST COMPUTER:

New diskette(s) [still shrinkwrapped!]:
$ 8.00 A.L.C.O.N. (Taito)

Atari software priced to move!

Application & Utility Software
(all with original disks and manuals)

Calamus SL .... $80 (actually includes Calamus and Calmus SL)
Pagestream $25
or both for just... $95!
(plus shipping)
****

Application Software bundle including:
(all manuals included except for titles with a *)

Superbase Professional
*Datamanager Professional
ST WORKS w/speedo GDOS
Phasar
LDW Power
Degas
Word Up
Xboot (Boot Utility)
Neodesk
*Neochrome
*Printmaster Plus
Thunder
Procopy
Label Master Elite
Warp 9
Knife ST
Diamond Back 3
Diamond Edge
Turbo ST
TurboJet
Revolver
G+plus

All for only..... $95 (for all 22 application programs!!)
(plus shipping)
****

Games & Entertainment bundle including:
(all original disks, but I lost the manuals)

Lemmings
Terramex

Arkanoid
Gauntlet
Crystal Castle
Indiana Jones & The Temple Of Doom
Speedball
Metrocross
Xenox
Blockout
Tetris
Music Studio
Leisure Suit Larry 3
Zany Golf
Shanghai
Arena
Space Quest 3
Marble Madness
Tv Sports Football
Gold Runner
Pac Mania
Star Ray
Kings Quest
Defender Of The Crown
Zak Mckraken
Uninvited
Borrowed Time
The Pawn
Star Wars
Dizzy Wizard
Champion Wrestling
Hex
Sundog Frozen Legacy
Electro Solitaire & 21
Star Glider
Leather Goddess Of Phoboes
Word For Word
Whishbringer
Flip Side
Backgammon
Witness

all for only.. $70 (for 41 games!! That's about $1.70 a game!!)
(plus shipping)

Please send me email if you are interested at RJRe@AOL.COM

I'm sorry you did as well, expecially as you're not coming back.
You'll continue through the rest of your life with a misconception.
Your loss, not ours.

>> Because most of this software is still being sold commercially. Just
>> because Atari have 'laid low' on the computer side of things doesn't mean
>> that Atari users have stopped supporting their Atari computers, and there
>
>I really was going to stay out of this, but this comment just about
>made me shit my pants. "Laid low"? "LAID LOW"?!?!?!
>Are you on crack? You call the pathetic state of the atari market over
>the course of the last (at least) 6 years "laying low"? You slay me.

Streuth! This guy could be a politician if he could put two sentences
together without swearing! Take a selected statement out of context,
ignore the point in the 3rd sentence, and invent a hate campaign based
on it, why don't you?

>I let the whole thing drop because I realized the software would
>always be unuseable on an st (or TT) and there was no point. I just
>couldn't give a shit anymore because I had already devoted enough time

>part for several reasons. If had never ordered nor received a graphics
>tablet, then they would be hardpressed to prove otherwise!

The above result made me laugh. I can imagine a horried Lexicor on the
end of a verbal torrent similar to his post. Life has a way of giving
you back what you put in eventually. ;-)

>GlueSTiK works better than using CAB with the CAB-for-MiNTNet overlay.

Not necessarily! Are you using the overlay v1.64 or v1.77? I find the latter
works better than GlueSTiK 1.02B. Remember with GlueSTiK you are going through
CAB->CAB.OVL->GlueSTiK->MiNTNet, whereas with the "proper" overlay you only have
CAB->CAB.OVL->MiNTNet.
This is from experience, not theory BTW :)

>
>Actually, the only problem I have found with the CAB-for-MiNTNet overlay is
>that the escape key has no effect on aborting it. This can be a real nuisance
>at times, and I was hoping that GlueSTiK with the CAB for STiK overlay

I don't believe it does - might be a MiNTNet deficiency.

Hi Chris,

Well spiolt for choice....

Shareware???

Well Maccel is very accomplished with spell check and all that, first word plus i think is shareware now.

Atari freindly ftp sites carry all wp's...some very good ones can be found on HENSA or UMICH...or try A bbs like the TAVERN or ADLIB.

Hope your frend enjoys the Atari and its ROM OS!

Regards

R D Stead

You don't say what machine you have. Be it an Apple or PC, you can get
stuff off of the net. You need to format a standard 720K floppy (80
track 9 sectors double sided) on the PC or Mac (file exchange thing).
Any ST machine can read this. Most atari stuff is on

src.doc.ic.ac.uk and atari.archive.umich.edu (difficult to get on
directly) and there are plenty of other sites, a full list can be
obtained from Hallvart's page below.

To be exact, most newer atari OS's can format themselves, and the ones
that can't can be made to do so with software off the net.

>A friend of mine has recenly aquired an Atari ST and has no disks or
>manuals he would also like to connect an electronic keyboard to it via
>the MIDI port.

Can't help with MIDI detals, except to say it is perfectly possible. :-)

>I beleive the OS is in ROM so he doesn't need OS disks, is this correct.

Yes.

>If anyone out there has time to answer a newbies questions or can
>point me to an ST FAQ i'd be gratefull.

>suggestions?

Electrical equipment typically blows up as your are turning it on or
off. The crash before turning it off would indicate (but not be
limited to) a power supply problem.

Have there been crackling sounds from the switch recently. If so, it
may be just the switch. They are poor quality. someone with a bit of
knowledge of switched mode PSU's (the dangers) could easily bypass the
switch to check this.

The crashing, I have suffered from myself. It comes in two forms. The
1st manifestation is the machine resets itself periodically, more so
as it gets warmer. This turned out to be due to dry solder joints and
can be temporarily cured by running a soldering iron over the
underside of the PSU. Start saving for a new PSU though because it
will do it again & again more regularly. The second, is the periodic
crash. Without test equipment, it is easier to replace the PSU - this
is assuming it _is_ the PSU responsible, it can be down to chips
comimg out of their sockets and this is easily fixed by pushing them
all back firmly (the expansion due to heating and cooling makes them
work their way out over time). You should do this anyway as you'll
have to have the machine to bits anyway.

If the switch is not broken, the most likely cause is that the PSU has
blown. Borrow a working and try that one if possible. Even if you had
noticed a crackling switch this in itself could blow the PSU.

Btw, do _not_ under any circumstances be tempted turn on the PSU when
it's output is disconnected - this is a good way of blowing them up
as well.

Lastly, I find the best source of PSU's is to put an ad in the local
paper for broken ST's or STE's. You can pick these up for virtually
nothing - these broken machines tend to have keyboard or disk drive
faults. :-)

You don't say if you get a screen or not Stephen, if you do albeit a blank one, it would suggest that the PSU has gone for a posh one. It is typical for the twelve volt line to go down. You will be able to tell if the the power supply unit is at fault with a visual inspection of it. Look for a blown or badly burnt wire wound resistor. Nothing short of a replacement will rectify a faulty PSU as most people will not attempt a repair. If the power supply is not at fault try all the connectors for a loose one, and while you have the cover off make sure any socketed chips have not come loose. Having said that I am almost sure you will find the PSU at fault.

Thanks to everyone who tested it for a Falcon.
I'll give you the results has soon has I know it fully works.

Also can someone please tell me a FTP site to put it on
and where to send it for a review.

You can still email me for a copy.
If you would like a copy for the Falcon please call the email:
Falcon: Learn the Net . And if it doesn't work on a falcon I'll tell you.

It does work on a St.

J> already bought the right to use it, then you should be
J> free to use that licenced property in any medium you wish
J> with without the further requirement to enrich
J> the copyright holder.

Actually, in most western countries, there are copyright laws that makes it illegal to copy music until 25 years after the composer has died. Because of this, the music publishers have to check the music their signed artists release - so they get licences to use samples and to record "cover" songs - not to risk a lawsuit.
If you study law, you should have been aware of this fact before you make a statement like you did.

4176. Typical Atari users...

Newsgroup: comp.sys.atari.st
Date: 1996-09-07 00:00:00 UTC
From: daymon@mammoth.psnw.com
Message-ID: <50qk60$l2n@alpine.psnw.com>
Source record: 138361

I must appologize for this incredibly long post. My "Mark block" feature isn't working properly right now. <:)

In article <50n5j7$qfq@news.inforamp.net> you wrote:
: I noticed this newsgroup for the first time today and thought I'd take
: a look. Sorry I did. I'm now having trouble keeping food down. I'll
: never come here again, but what I saw begs for comment.

Well, I know you've probably received more than your share of flames from this, so I'll be civil here. I'm sorry to hear that you didn't like what you saw here at c.s.a.s. I've been kind of disappointed myself with all the pointless bickering that is going on there now. It used to be nothing but calm discussions about software and people helping others. It was a very refreshing place to come for info on Atari stuff! People were very friendly. Lately it's been nothing but people coming in and attacking those of us who chose to use Atari compatibles. It's pretty sad, actually.

: I really was going to stay out of this, but this comment just about
: made me shit my pants. "Laid low"? "LAID LOW"?!?!?!
: Are you on crack? You call the pathetic state of the atari market over
: the course of the last (at least) 6 years "laying low"? You slay me.

Yeah, you're right. Atari as a company has been a little more than laying low. Luckily for us, we don't have to even deal with that "company" anymore because other more responsible companies have taken on the TOS world. It's really exciting what's going on.

: Typical atari users: wankers through and through. Your heads buried in
: the sand when you're not watching Star Trek of Monty Python movies.
: Pointing fingers in the wrong directions. All of you experts with no
: expertise.

Well, no need for insults, buddy! Believe it or not, there are those of us who have taken our heads out of the sand and looked into moving to a different system. Myself being one of them. I use PC's at work and both PC's and Mac's at the University, and altho I really don't like PC's at all (just my own personal preference), I was seriously looking into getting a Mac to replace my *OLD* Atari ST. But after seriously weighing my options and considering what would be the best computer for my needs at the best price, decided to purchace a C-Lab Falcon MK-X. Even though it does lack some of the power that the Mac has, it does exactly what I need it to do: Direct-to-disk digital multi-track audio recording, MIDI sequencing, the normal word processing/DTP stuff, and Internet access. It also has a few other really nice features that I've really fallen in love with.

: Whoever said it was spot on: Atari abandoned the ST ages and ages ago.
: I bought one in 1990 (?) because I was interested in midi
: capabilities, a friend of mine had one and I could afford it. I soon
: realized my mistake.

Well, I bought mine in 1988 for the same reason, and I never regretted
it. It blew away any Mac or PC at that time, and had MIDI capabilities,
which is a must for me, being a musician. And as far as software and
hardware availability, if I couldn't find it here, I just needed to make
a quick call to Toad Computers or some other place, and it'd be here in
no time. I've never had any bad exeriences to really speak of (other than
some slight problems that happen on any machine).

: Right from the get-go I realized that Atari was run by little better
: than trained monkeys. I had never in my life seen such examples of how
: NOT to run a company. No clue on how to manage inventory. No fucking
: marketing savvy whatsoever. This is a company that did not know their
: market - at all. Failed product offerings. I was and am floored by
: their business impotence. I used to believe that Atari was little more
: than a tax strategy employed by the Tramiels or whatever the fuck
: their names are to enable them to enjoy favourable write-offs. Their
: first run of luck with Commodore was just that - luck. It was
: difficult NOT to make money in silicon valley at that time. It caught
: up with them. I used to wonder just what the hell atari employees did
: all day. I often thought of writing a case on atari in one of my
: marketing courses of business policy courses. I've never seen such
: incompetence.

I totally agree. They never did run the company the way it should have
been run. But it never affected me, so no worries here.

: At first I couldn't understand why atari users bent over and took it
: from developers and atari. I remember my first shock at discovering
: that a great deal of software (mostly games) could not be installed on
: a hard drive. And every once in awhile, Atari would throw you people a
: bone - a useless little trinket which you and atari 'publications'
: would immediately trumpet as the beginning of the turnaround for atari
: - wankers. Things like enhanced gdos and xcontrol were met with such
: excitement that I was blown away. I was like "what the hell is all the
: damned excitement over?". It's like watching commercials - it's so
: easy to tell that marketers have no respect for consumers - consider
: them to be braindead. Maybe they're right. I'm sure few of you people
: are insulted by commercials - they work on you. And just what the HELL
: was the STE? People creaming their jeans over an 'enhanced' (chuckle)
: palette of 4096 colours - only 16 at a time though...a thoroughly
: useless 'enhancement', but people lost their minds over it.

Well, look at microsoft and PC's. They were never the greatest machines
in the world, but at least here in the US, people do have a tendancy to
go with what everyone else goes with, not with what's best. That's just
life. As far as the STe thing, well, yes you could access the 4096
colors, if you get the software to do it. Just like Spectrum 512 on the
ST's. There really wasn't a 16-color limit if software was written to use

it, just like any feature on a computer. And they also had better sound and were faster and easier to upgrade. Yeah, I know, big whoopie, but it WAS an improvement, albeit a small one. I don't remember people going THAT crazy over them!

: Now that I'm thinking about it, I remember getting screwed over huge
: by that fucker at Lexicor software. I bought their piece of shit
: package - the whole enchilada, chronos, prism, rosetta, umm....I can't
: remember what else it included, but I shelled out the bucks for it.
: It's my own fault really...I was younger then, and I was somehow
: under the impression that an atari could do 3d rendering and true
: colour painting etc. - actually, I already new st's were shit but I
: really loved 3d animation...
: I remember the frequent crashes I got when running the software and
: the unbelievable rudeness I encountered when calling Lexicor for
: assistance. What's his name - Lees Seeler? - had the fucking tenacity,
: the utter lack of respect to blow off my concerns with the statement,
: "Well, software is very complex you know...you've probably got a
: flipped bit somewhere". Can you fucking beat that? I just about shat.
: Also, I remember one module of the software didn't arrive with my
: package. Instead I got some fucking cheesy certificate stating my copy
: of whatever it was would be shipped when it was ready.
: Eventually, I was fed up and said as much. I was told to ship the
: software back with the dongle and get a replacement or something. I
: did as much and DIG THIS was later told that I would not get my
: software back! Lexicor stole my software from me!!! I paid, what? $500
: for that piece of shit, and I got fucked hard. I think the story went
: that I owed them money for a tablet or some such thing...? I couldn't
: help but laugh when I heard this because I did not have a tablet. I
: had never ordered nor received a tablet. The software was paid for. It
: was much easier for them to fuck me than to make their shitty software
: work.

Sorry about that! Like I said before, I have never had any such problems. You must have been one of the unlucky few to have gotten screwed over by an Atari-related company (other than Atari itself, of course).

: Shit....I should sue his fucking punk ass...

I don't see why not! Go for it! Let them know how much you hate them and what they did to you! Of course, they'll never support the rest of us Atarians again, but what the heck? ;)

: I let the whole thing drop because I realized the software would
: always be unuseable on an st (or TT) and there was no point. I just
: couldn't give a shit anymore because I had already devoted enough time
: money and effort to Lexicors bullshit. It didn't matter. But now that
: I think about it, it would be so easy to prove wrongdoing on Lexicor's
: part for several reasons. If had never ordered nor received a graphics
: tablet, then they would be hardpressed to prove otherwise!

: Just an overly long example of how shitty things in the atari world
: were.

Once again, it hasn't been that bad! What, one botched-up software order and a company that was horribly ran, but we don't have to worry about anymore because better companies have taken its place. It's not the most fun thing, but not the end of the world. I've heard of worse cases in the PC world. It happens no matter what platform you use.

: Understand this people: ataris aren't computers - they're oversized
: calculators, and not very good ones.

Wow! What kind of calculator do you use?!?! I've never seen one that'll do everything my Falcon can do! Or my old ST, for that matter! Cool! Let me know where to get one! ;)

: The only good thing about them is the built in midi ports (that's why
: I bought mine). I must admit that I feel safer running a sequencer on
: my st than on any 133 MHz pentium. Now a PowerMac on the other hand...

Exactly why I use them! It has awesome music features, and the graphics handling isn't bad, either.

: You people make me sick. Hanging on too passionately to a dinosaur.
: Pirating did not kill the atari. Whoever made the point that
: developers screwed people right out of the gate by assuming all atari
: owners are pirates, was correct. Atari and atari developers killed the
: platform. The platform was shit, that's what killed the platform.
: Don't give my your price performance bullshit. Beat the price
: performance of a wintel machine. Yeah, yeah windows is so far from the
: best solution, but you know what, the dos/win 31 combo still beats the
: shit ouf of tos/gem for usability and power. This statement is coming
: from somebody who hates Dos and Windows with a passion. The software
: industry is the only industry that doesn't really have to have working
: products. Computer users have come to accept buggy software as fair
: game, and as such companies like Microsoft make much money from that.
: Do you really believe that it is that difficult to write an operating
: system and user interface? With scads of the brightest and best
: software developers in the world at your command? I think not. The
: fact is that software companies don't make a great deal of money from
: perfect software. Buggy software leads to upgrades. Paid upgrades.
: Constant upgrades mean constant revenue streams.

: Your complacency killed the atari and destroyed normal peoples chances
: at having a decent platform. You let atari screw you and said thank
: you very much on every occasion. We were the market, not atari, and
: you all forgot this. THAT killed your precious fucking platform.

What's killing Apple, I wonder? Oh, yeah, it's those darned PC's! Well, luckily for us, our platform ISN'T dead yet! In fact, it's doing better now than it has in a long time! I mean, there's the C-Lab Falcons, the Medusa machines, altho they are a bit pricy, which can easily compete with PC's and Mac's of today, and the simila Computer Direct machines. Oh, yeah, then there's MagiCMac and MagiCPC and GEMulator and a ton of

other TOS compatible alternatives. Shareware/Freeware is still very active in making some really great software, as are a lot of other commercial software makers. I don't see a dead platform here, do you? Show me where so I can finally bury the poor thing! ;)

: Respect to the few voices of reason here and my apologies to you for
: my bile. The rest of you grow up and get a grip.

Hey, no problem, bud! I can understand your frustration. It's ok, tho. Just try considering this philosophy, which I completely embrace: The best computer you can buy is the computer that will serve your needs the best. Mac's and PC's won't do that for me. That's why I use Atari-compatible machines. They fit my needs perfectly. When my needs change and I need to get a new computer maybe it'll be a PowerMac or Mac or PC or some other obsure little machine. As long as it does what I want it to, that's what's important. I hate to use that overdone car analogy, but it fits. Yeah, I could get a Ferrari, or a Porche, or a BMW. But my Ford still runs great, gets me where I need to go, and doesn't cost a whole lot. I hope no one tells me that my car is crap and I need to get a better, more powerful one. Sure it might be nice, but I wouldn't want to leave it in my school parking lot for very long now, would I? Ok, that was a bit of a stretch, but I think you got my point. Well, I hope you have found the computer that works well for you. I have. And if you have any other comments to make, feel free to e-mail me!

h>
h> Yeah, I did get it to read both .PS and .PDF files, but right now I
h> can't. I haven't had the time, will nor energy to look into it again as
h> I remember that I had a *lot* of trouble when I installed it,
h> experimenting with different directories/partitions.
Yeah, it's hard-wired to be run from drive I, IIRC.

It's possible to hack the code with a file editor to make it run from
elsewhere quite successfully.

h> I'll probably get back to it later some time though.
It will work, trust me! (g)

h> seemed to work properly in one specific setup anyway :-(
Yep, see above.

Regards, Derryck

x> I've been fighting it too, but it says it's having a problem finding
x> the right font, not the font path. (Already got the environment
x> working!) ;^)

The problem is that the font mapping control file "fontmap" specifies a font file (Courier, IIRC) that is not available in the distribution and thus substitutes the "Ugly" font instead. You could try getting hold of some PD Postscript fonts and install them in the fontmap file. A fiddly business but one that is ultimately successful IMO.

Good luck.

Regards, Derryck

d> I am running a 4 meg STE and am thinking of attempting to speed it up.
d> These days it is used mostly for text editing and C++. Particulary I
d> want to improve the screen display speed.

Screen display improvements can be found in the likes of NVDI, giving you
other flexibility in such as font handling. Magic might give a general
machine speed up, but the ultimate would be all three and an hardware
accelerator of some sorts.

Message-ID: <18889_SSweet@mettav.demon.co.uk>
Source record: 138366

FROM: SSweet@mettav.demon.co.uk
SUBJ: CPX Screen Saver for XCONTROL

s> Could any one tell me where I might get a copy of the CPX Screen Saver
s> for XCONTROL?

I dont know of a screen saver that is strictly a cpx, but a prog to do what you want that is controlled by a cpx is silkmouse, this also offers a mouse speeder and also some other features such as port watching. This will rotate the screen for a predetermined time and then black it out after another predefined time.

s> I would like to try this as some of the screen savers I have tried tend
s> to interfere with other programs or they talke up too much memory.

I use SilkMouse and it does no bother to /any/ of my software. I use magic, NVDI, Semper, Jetmail, LED, Papyrus, Twist, Protext, Everest, to name a few everyday applications.

s> Glad for any advise on where I might get a copy from.

The Tavern BBS as SILK3.ZIP.

Regards from STEve & his nice warm cosey PAK'd MegaSTE.

[cut]

j> reboot rather than using the CPX. It's puzzling that this solution
j> works as it states quite plainly in the StraightFax docs for Version
j> 2.5 that the StraightFax Drivers won't work with NVDI. Just goes to
j> show what RTFM then IgnoringTFM will do.
I had the advantage that the only docs I have are the printed ones for 2.2 and the readme files on an updated STFax master disk, neither mention this IIRC. So, you are now using the Speedo driver with NVDI, or are you using the plain GDOS STFax driver now?

j> Derryck Croker (DCroker@mettav.demon.co.uk) wrote:
j> :
j> : Not quite right, the IMG.SYS driver needs to be entered as device 91

j> I agree with this but I'm puzzled by the reference to the Driver CPX.
j> This didn't come with my version of NVDI. I'd love to find out how to
j> get a copy.
Ah, no wonder there's confusion. You must have been referring to the Speedo CPX, which manages the assign.sys file, the NVDI one is a little more advanced although it essentially does the same job.

Refer to your dealer is the obvious answer, your master disk is obviously faulty.

Regards, Derryck

You have to call Steinberg Germany for the fix (2 replacement chips). It'll
cost you nothing or just a few dollars. There's a little soldering needed,
but it worked for me.
The package came in two days from Germany to Finland.

You might also try support via Internet:

I have a few machines, TT030, Falcon030 and STs. But there are many
machines that I don't have (e.g. Hades, T40, T60, MagiCMac...). In fact, I
mainly use just the TT030.

Yet software that I write is compatible with any Atari TOS compatible machine.
Even if I don't have the machine in question, it is still compatible with it.
At least that's the theory, and it has not been proved wrong yet.

I never found it difficult, either. Just use the AES and VDI for display,
do no access hardware directly etc. In fact, it is usually easier to
go via the OS than to access hardware directly.

If I ever review software, my opinion is that it is fairly hopeless if it
is not written "properly" and compatible with all machines, unless there is
a good reason (e.g. uses hardware only available in certain machines).
Except of course for TOS versions prior to 1.04 that are buggy anyway,
and I can understand if it requires a lot of RAM. What I don't understand is
why people write software "improperly" so that it is not compatible with
many machines - see my comments above for my experiences.

All IMHO.

Yes, any PC can read an Atari CD. The only problem you'll have is
if the programs and/or data won't fit on a single floppy. To be safe
make sure you format the floppy on the PC side for compatibility.
If you've upgraded to a HD floppy you'll be in better shape for
transferring. You can also use a null modem cable and a telecom
program on both ends to move the data, especially in cases where
the files are too big.

On an Atari 1040 ST (4meg) running Dr T's Omega, the screens come up askew -- text and function to the right of buttons by a couple of inches. I used to be able to solve the problem by reloading the program from floppy, but now the floppy drive seems to be inaccessible. Can anyone help me figure out What on Earth would cause this weird problem? And suggest what can be done to fix it? Any help would be much appreciated!

Bet whoever wrote that feels a bit silly now, I am sure he will have
had it pointed out that all BASIC have IF, well all the ones in this
thread do :)

>I've never put down Hisoft Basic, as I've never tried it. However as
>STF put GFA 2, and then GFA 3 on their coverdisks... GFA Basic very
>much gre on me.

Highsoft BASIC and STOS basic have also appeared on cover disks?,

>I've tried various simple comparisson tests to find out which of the
>basics I've tried (GFA, STOS and QBasic (erg PC)) to get an idea of
>the speed of each.

Depends what tests you made, thats not a viable way of testing in my
opinion, not unless you test every command, some basics are faster at
one thing, but not at another, plus there are always more than one way
to skin a cat,
For example STOS BASIC uses the normal PRINT command, yet I can use
the TEXT command from the Missing Link extension (thats a simple
language update to STOS) and print two full pages of text in the time
it takes to write one line with PRINT

Another example would be a string$ search, most BASIC languages will
have plenty of string$ manipulating commands, yet using varptr and
finding the actual address of the string and doing your tasks from
there will always be ten times faster, still viable BASIC commands?
but not what you will find in a BASIC manual,

Whats the point of testing the PRINT command if it can be done faster
from within BASIC anyway?,

>However I've never tried Hisoft basic and so have no idea of how fast
>it is in comparisson to the others (this is _part_ of a reason to
>using a basic).

This is how I see it, You can stick Damon Hill in a car, and me in
the same sort of car, exactly the same car, but I know who will make
theres go faster, so its not so much the language as the user?,

>If anyone out there with a knowledge of basic and a copy of Hisoft
>basic would like to get in touch, then maybe we could run some 'fair'

>compraissons of the top basics: GFA, Hisoft and STOS (Tony - using

fair? hmmm how would you work that one out, I could say right lets
all make a game, and STOS BASIC would stuff all the rest, including
most none BASIC supposedly better languages, I think everyone in
ATARIland would agree on that :)
But if you then set a test that involves anything like GEM and STOS
is stuffed,
The only fair way would be to set catagories, set tests and only take
the actual ascii BASIC listing, you compile and see which is best,
Pure ascii listing means just that, no add ons :)

>STOS so much, you know far more than me... would you like to put
>forward STOS's side of the story ??).

Just did I think :), never turn down an offer to spread the word me,
too many people still got there head in the sand, tried a stos written
game a few years ago and now wont listen to anything but there biased
views :), but I keep chiping away, chiping away, will convert them all
sooner or later :)

>If anyone would be interested in designing and carrying out a set of fair
>tests for each comparisson of the basics... please get in touch via
>email.

You should put an idea like this forward to an association, the only
programming one I can think of is ICTARI, either that or set it up
yourself?, I will be there with my shiny trusty STOS disk :)

The gripe was/is I am not able to make software 100% compatable with machines I do NOT own, unless of course the above paragraph was an offer <says he hopefully> <G>

>Yet software that I write is compatible with any Atari TOS compatible machine.
>Even if I don't have the machine in question, it is still compatible with it.
>At least that's the theory, and it has not been proved wrong yet.

Yes I can make software that will work on all the above and more, I have stated in other parts of this thread that certain software can be done as it does not rely on an exact speed, ie the text displayers and Diskzine shells I make work on all tos version, even on GEMulator? But a fast moving platform game, 8 way multiscrolling and all the rest, well that has to be exact and I cannot make such a game on my humble STe that will then work on everything, not that type of game,

>I never found it difficult, either. Just use the AES and VDI for display,

>a good reason (e.g. uses hardware only available in certain machines).

Then you are exactly the type of person who I originally moaned about at the start of this thread, it is unfair of you or anyone else to call my software hopeless just because it will not work on a none ST machine, it is also a little off putting for a programmer to read such comments, I can take critisism if theres a bug or the software is generally crap, but its hard to swallow when someone suggests a perfectly good program is lacking or hopeless because it wont run on there none ST machine, and IMHO:) people with that type of attitude towards freeware software developers should not be reviewing,

If you review software, why say its hopeless because it doesent work on a none ST, when it was made on a ST by an ST user who only has access to an ST, This is what I do not understand?

When I had my T25, I didn't expect _anything_ (well, "properly" written GEM apps) to run at 25 MHz, but you can switch down to 8 MHz. I only "expect" software to run on "standard" machines. The accelerated machines (such as my FX Falcon, which I didn't even mention) are in a class of their own and are so rare as to be almost insignificant, especially to the casual programmmer. As far as alternate OS go, they can be turned off.

I believe Backwards allows a Falcon owner to slow down to ST speed, so Backwards-compatible" is enough for me to be happy. TT owners unfortunately don't have that luxury, but we all knew when they came out that they weren't "games" machines, they were "work stations".

And yes, I do like all the cool things smart programmers have done, "breaking the rules", but I probably wouldn't buy software for an ST, even though I have one.

I've never seen a RAM board for less than $99 US. Unless it was used. It costs too much to make
a run of double-sided circuit boards, plus packaging, plus the time to design.

The Mark X is different from "normal Falcons, depending on your
location. They are not the
same as NTSC Falcon. The Mark X uses a PAL motherboad which has no RF
modulator, meaning no
composite video output for VCR recording or video monitoring :(. The
hardware for the RF modulator
has be left off the board as well, making it an expensive prospect to
install one.

The new case is very nice, and will work with all the expansions Claes
detailed. He left out
a few details however. It still has the original powersupply with no
provisions for additional
hard disk or other devices. Easily fixed, but it would have been nice
for then to spend a few
extra dollars (Pounds or Marks :) to install a more flexible source.

The hard disk mounting frame sits very close to the motherboard. If you
are using a standard
Falcon memory board, or a Wizztronics Falcon Memory board, you will have
clearence. If you are using

a card that uses 4-30 pin simms on top your out of luck as it will
interfer with the mount (unless
you hack it up).

The internal SCSI connector is not standard. You will have to purchase
an additional cable ($60.00 U.S.)
to connect an internal SCSI device.

Other than that, they are like "normal Falcons" once booted :).

Mike

I'm not sure what TOS you have, but if you have 1.04 or above then you
should be able to read a DOS formated disk on the ST. Make sure that it
is a 'double-density' disk and not 'high-density' which is now common
among PC's. If you need any further help on this, just let us know here. :)

I often wonder myself if Billionare Bill and the PC makers have a sweet deal going for themselves. All things Windoze will keep sucking up resources like speed, memory, and space. This is why Intel comes out with faster Pentiums, Sysquest with bigger drives, and currently at least 16 megs though this may change in the near future. Do you really all of THAT just to type a freaking term paper? Only if running under Windoze...

Yeah, that's why if I ever get that PC I'm going to run only ST applications when I'm not playing games on it :)

I> starship@3rdplanet.com says...
I>
I> Soldiers not taught to kill and to blindly obey? What sort of
I> 'Star Trek military' were you serving in anyways?

You have obviously never served in the US military - I would say your statement characterizes the Marine Corps (and not all of the jarheads), but it's hardly representative of any of the other services.

And a nit: "anyways" is improper grammar.

"To blindly obey" would seem to indicate that the soldier would follow any order, even if it is obviously illegal, without question. You know nothing. The Geneva Convention and the laws of war are taught to EVERY US soldier. There is provision in the Uniform Code of Miltiary Justice for refusing to obey illegal orders; in fact, obeying illegal orders is a crime in and of itself. Or have you never heard of Lieutenant Calley?

You denigrate my knowledge and expertise in areas where you are abysmally ignorant, arrogant, and apparently quite happily stupid (stupidity being defined as incapable of learning).

>> There is no such thing as "shareware piracy." If a program is
>> commercial,
>> and you have a copy of it, either you bought it, or you stole it. There
>> is no middle ground - no in law, not in ethics. Although you attempt to

>> either.
I>
I> I am still awating to see your moral basis.
I> All you can do is scream at me.
I> You are completely incapable of any real dialog on ethics.

You desperately need to consult a book on logic and philosphy. You don't seem to understand either logical debate, nor ethics.

Let me explain it in very simple terms. There's a bare chance that you may comprehend (though I doubt it):

You have stated that piracy is tantamount to shareware. In support of that statement, you made an ad hominem attack wherein you called me a fascist. While that may be considered excellent debating technique in Ohio, in most parts of the world, it won't wash.

I have demonstrated that software piracy is theft, and it is a given that theft is illegal and unethical in Western society. I have also demonstrated that you have no knowledge about what is taught to American servicemen.

You persist in repeating, in continuingly more strident terms, that you are right and I am wrong. You do not offer any evidence whatsoever in support of your position, nor do you offer any response that directly relates to my exposition of your lack of evidence. You have, however, added yet more ad hominem attacks and you continue to denigrate my knowledge of networking, and computers in general (in other messages which I choose to let lie in my trash area).

Let me explain it again; I have been a published software author since 1984; I have used every available type of desktop computer since 1977, and programmed for at least five different platforms. I understand copyright law (and how it has changed since 1984 and present); I am a copyright holder, and also the author of "works for hire," meaning the person who paid me to write the software is the copyright holder. I am currently a consulting network engineer, competent on several different Network Operating Systems, including the two most widely used, Novell and Windows NT, presently working at facilities of the world's largest chip manufacturer.

You, on the other hand, are a university student. The concept of "student" perhaps is something that has escaped your grasp; it means "one who studies." It would be advantageous, perhaps, if you were to apply that concept to several ideas; you have demonstrated an appalling lack of understanding of copyright law, rigorous logic, debating technique, ethics, and civilized behavior.

Somehow, I don't see where it is /I/ who continues "screaming" at /you/.

>> Assuming I have misinterpreted your stance, for that I apologize.
I>
I>
I>

And you remain quite strangely silent on this point. Is there a problem with acknowledging that I am willing to behave in a civilized fashion? Does that not fit in with your plans? After all, it simply wouldn't do to let people see that the man you call a "fascist" has civilized mores and the ability to admit when he may be wrong, would it?

I> A lock on your door enriches YOU, not the builder.

A lock on my door keeps /my/ property under /my/ control; only if I charge admission to my house will it enrich me.

>> Let's see. Someone steals my horse, so I am better off, because they'll

>> worthwhile.
I>
I> Another instance of the Terminal Program == Terminal Fallacy.
I>
I> Unathorized distribution of software incurs no direct cost
I> upon the developer.

Straw man. I have not (nor has anyone else, up to this point) stated that piracy incurs a direct cost on the developer. What it costs is potential sales. You know it, I know it, everyone who can read and think knows it.

>> This is the point where you claim my argument breaks down - I can point
>> to someone I know who didn't buy several packages because he was able to

>> get no benefit from his punishment).
I>
I> Most of the pirates I knew would never have been able to afford
I> 'several' packages. Apparently, your experience is different.

My experience is different.

Let's take it from a more abstract standpoint; Assume that our hypothetical customer (let's call him "Bob") is a professional musician, and wants to use MIDI sequencing in his work - work which generates income. This "Bob" is a composite of several real people with whom I am personally acquainted; he is as real as any of us.

"Bob" buys an Atari ST computer because he sees the convenience inherent in a system that integrates MIDI into the computer from the intial design decision. Now he needs a sequencer. Now, "Bob" knew at the outset that MIDI sequencers aren't freely available, but that they cost money, just as the computer does. However, after buying the computer, he no longer has the requisite $600 to buy Cubase. No other program meets the specifications he has decided upon. With careful budgeting, he figures he could save it up in about 6 months. In the meantime, he can't use the computer in his work, but he was making a living before he got the computer, so while his wants are not being met immediately, his needs are still fulfilled.

Then "Steve" comes along and offers him a "cracked" copy of Cubase.

I contend that, if "Bob" accepts and uses the pirate copy, the likelyhood that he will later purchase Cubase approaches zero, because "Bob" is a typical human being and will probably never buy anything that he has been given for free. I also state unequivocably that to accept the cracked copy and use it in his work is theft - theft of intellectual property, a product which took hundreds, perhaps thousands, of hours of development time, and still requires many hours of maintenance as various minor bugs ar discovered, or new features added.

And what is your position on this hypothetical case?

How can I link my Atari Portfolio with a serial printer interface to my PC. Wich software must I use to transfer files between the two machines ?

Thank you for answering.

4223. Re: Cracked Atari explained...

Newsgroup: comp.sys.atari.st
Date: 1996-09-07 00:00:00 UTC
From: comdungeon@aol.com
Message-ID: <50sov1$t7d@newsbf02.news.aol.com>
Source record: 138408

re the following: "Actually, in most western countries, there are copyright laws that makes it illegal to copy music until 25 years after the composer has died. Because of this, the music publishers have to check the music their signed artists release - so they get licences to use samples and to record "cover" songs - not to risk a lawsuit. If you study law, you should have been aware of this fact before you make a statement like you did."

Copyright law of 1976 and amended in 1980 (and litigated for 20 years): The owner of the copyright (usually the author, but not always) controls the right to license, copy, prepare derivative works (movies from books, maintenance releases to software), and authorize public performances of the work.

HOWEVER, the public and licensee STILL is accorded fair use of the product. This includes the right to make copies (music OR software) for backup, for loading into RAM for execution and for personal use (not for sale, for distribution to friends - even for free, etc.) (Also, incidently, covers the right to sell the product to another person, provided no copy of the materials is retained by the original owner. This is known as the Doctrine of First Sale.)

SO, IF you study the law - that is - intellectual property law, you will find that, as long as one is legally licensed for the product, i.e. by purchase of the product, you are entitled to replacement media. As a matter of fact, the Uniform Commercial Code, Section 2, covers exactly such replacement of defective medium which is to be provided by the author (if still in existance) at a nominal preparation fee.
Next HOWEVER, is that, although you may be entitled to replacement media under the copyright law, no one else who has a legitimate copy of the software is entitled to GIVE you a replacement except the original author.

4224. Question about TIN (for MiNT wizards)

Newsgroup: comp.sys.atari.st
Date: 1996-09-07 00:00:00 UTC
From: comezana@math.psu.edu
Message-ID: <50sqen$f9i@dodgson.math.psu.edu>
Source record: 138409

I have a problem trying to run TIN on my Falcon when reading news from a server requiring authentication: it tries to connect to the server, but soon I get a "connection to server timed out - Reconnect?" message and it keeps doing that. On the other hand that does not happen when the server does not require authentication (for example, a server in my own subdomain). Incidentally, the behaviour I have just described is exactly the same as what happens if you try to connect to the server from an account whose userid differs from the userid in my account at the server. The funny thing is that the problem does not show up on my STe, with exactly the same setup (same versions of MiNT, TIN, MiNTNet, serial device drivers, etc.). However, since on the STe I have "only" 4 Mb, I run out of memory in the middle of reading the news_active file of the big server I am interested in, or if I suceed in doing that (by using the -n option), I also run out of memory if I try to go to a newsgroup with a lot of unread news (for example > 1500). So it's a catch 22: if I use the STe, I don't have enough memory, and if I use the Falcon, I have 14 Mb of memory, but authentication does not seem to work. Does anybody have any suggestions?

Gustavo

TM> What's wrong with Base 64?

Nothing - as long as the poster is CERTAIN that his intended audience can
decode it. Considering that the majority of "real" newsreaders (as opposed
to Netscape, which has a newsreader but very few of the most desireable
features which are foudn in Aget, NewsXpress, and Pegasus, for example)
support UUencode/decode by default, and that Base64 is rather less forgiving
of extraneous lines before and after the actual code than UUcode is, it seems
a poor choice to me. YMMV.

I have same problems with the graphics since I installed NVDI 4.1.
Soeme pages, that makes no problems with NVDI 2.5 , are now shown
without the graphics. The text information is alright. It is not a
problem of too little RAM. I tried everything and had at least 3 MB
free RAM, but the graphics were not loaded anymore. I asked Alexander
Clauss, but he don't know either, what could be the bug.

Any idea what would make the 12V output of a 1040 ST power supply
read high? Like 16 volts? The 5 volt output is normal.

t> How do I make a connection to my WINdoze NT from the ST? TCP/IP - but
t> how?

You need to install the TCP/IP server on the NT machine first, and to do that, you'll need to find a network driver for the serial port. I don't know if M$ includes that on the CD (we always test our stuff with Ethernet cards at work), but it seems as if they should. Of course, it seems as if they should have been able to release Win95 with somewhat fewer than the 2000+ "known" bugs, too...

Anyhow, once you have the NT server installed and willing to accept input, /then/ you can try to link the ST into the serial port...

The 16450 is essentially the same as the 8250 chip - functionally equivalent,
that is. In order to get good hihg-speed performance, you need a 16550; it
has internal data buffering so if an interrupt isn't processed immediately,
you don't lose data.

Juno tells you something of this nature up front; the addresses aren't to be sold (after all, then their users might be lured away easily), but they sell "virtual advertising space," which means that a small banner will appear with each email, much like the banners at the top of each of the search engine pages (Yahoo, www.filez.com, and so on).

You should be mroe concerned about looking at Web sites, actually; if you use Netscape or other similar commercial browsers, they report your email address to the Web server. Of course, you can put a spoofed address in the browser. That could be fun if you put in something like root@127.0.0.1 for example...

Strange, I've never had trouble with .PS files. (I use GEMENV) What's
galling is that the CD comes with v3.33 which ought to be able to handle .PDFs.
In fact it was put on the CD for that sole purpose... Oh well, getting the UMICH
archive for 25 quid can't be bad...

Have Fun,
"Augeas"

In an older release of CAB, it would come up with the text "Binary File!!!"
and let you save the file through a fileselector. Now, it just displays it,
for some reason. Is this an error in my configuration?

Either way, the binary can still be obtained by just copying it straight out
of the cache directory, or by using CACHE_ED.

And I believe there is FTP software for STiK, called MG FTP.

>works better than GlueSTiK 1.02B. Remember with GlueSTiK you are going through

My CAB<>MiNTNet overlay is version 1.77. Is there a later one?

Either way, if GlueSTiK and the STiK overlay work worse than just the
MiNTNet overlay then I guess I am wasting my time.

>>at times, and I was hoping that GlueSTiK with the CAB for STiK overlay
>>would solve this.
>>
>I don't believe it does - might be a MiNTNet deficiency.

MiNTNet should not have anything to do with this. AFAICS, it seems that
this is handled either by CAB or the overlay or both. And it seems that
the MiNTNet _overlay_ doesn't do it (I am not talking about MiNTNet itself,
just the overlay). Of course, this ss just me guessing - I could be entirely
wrong. But I doubt that STiK itself checks for the escape key, this would
cause endless other problems.

I suggest that you get hold of a copy of First Word from a PD library as
it should provide most of the facilities you want (unless you want to do
anything complicated).

The OS is held in ROM so you don't need any disks to load it.

>115k from the Falcon, it just refuses to SEND 115k to me. I admit, this
>seems like a small quibble, but it would be really neat to get both
>machines at the same xfer rate. Color me egalitarian.

As it is said above (by Rory), 8250(16450) can hardly get up
to 19 200. I have tested it with Ghostlink and Falcon/486DX266
and get too much errors to be usable in 19200, so I have to
use it in 9600 :(. And that PC have (MSD said 8250) 16450 UART-
chip inside.
BTW I dont think that there is any use if you configure
com1 or com2 in PC with another program than PCSlave,as it
uses its own(internal in program AFAIK) configuration for
bits,parity,stopbits and for port and speed which are selectable.

>I've also had a 28.8 modem hooked up to it for a while, and have recieved
>and sent through it at upwards of 3000 CPS, which to me would seem to
>belie a fast link from the computer to modem, disregarding compression.

Sounds unbelivable to me, because I have lots of problems
while trying to use 19 200 speed in my brothers PC.
9600 being stabile and usable.

>
>Thanks again, and I hope the cars don't hit the
>aardvyrk@cris.com

P.S. I can test Ghostlink with my new AMD5x86-P75 and Falcon
if interested os speed they are capable of connect.
...Later on...
P.S.S I got connection at speed 115x00 (as I should).

4253. AERCO ram upgrade problem

Newsgroup: comp.sys.atari.st
Date: 1996-09-08 00:00:00 UTC
From: Mike Wasinger <mwasinge@nyx.cs.du.edu>
Message-ID: <32328460.77C9@nyx.cs.du.edu>
Source record: 138329

Recently some nice person gave me 32 1-Mbit DRAMs, so I thought it would be cool to upgrade my 520 ST to 4Mb.

Fortunately, back in '87 I bought the "AERCO easiST SOLDERLESS RAM" upgrade board with extra sockets.

Unfortunately, it came with little documentation. In fact when I called AERCO for instructions about bringing the board to 4Mb, they said that they thought several jumpers needed to be added to the board, and several traces cut on the motherboard. But, sadly, they <<<threw their documents out>>> some time ago and have *nothing* on file.

Does anyone out there have this board in their 520 ST. Any help on converting this baby to 4Mb would be great. Right now I'm reverse engineering it line by line and comparing that to several ram upgrade documents I have found for the ST.

Thanks,
Mike

I've got v 3.53 installed in my I: partition, GHOST directory. There are two files in my fonts folder, FONTMAP and NCRR.PFA. NCRR.PFA is legible and seems to claim to be the Courier PS font. The top lines are commented and the rest of the file appears to be hex. There is one line that isn't commented and it says "11 Dict begin". Maybe it should be commented, too.

I've tranferred files between Stalker and a PC telecomm package and couldn't get over 19,200 but I suppose that has to do with the serial CPX on the Falcon (which I'm getting updated). The PC has the high speed serial chip, though.

I believe the program might be Screen Artist. I think I got it from cnam
France in the CPX directory.

Dan

I am having a little difficulty getting it stable, but it works. Oh, and you
must have an FPU.

I don't know the internals, but it gives the Falcon 38,400 57,600 76,800 and 153,800 bps-rate
selectors (rather than MODEM.CPX limit of 19,200.

Actually, I'm having a little trouble with FSERIAL. (And I'm usually pretty good at hacking through this stuff). Okay, I use FAST_SER.PRG in my AUTO folder, I use FSERIAL.CPX, and I'm using HSMODEM6. With FSERIAL loaded, Stalker no longer works, even if I set it exactly like MODEM.CPX was before loading FSERIAL. The modem won't pick up the line or dial.

Any ideas?

Dan

Yeah... I know :)

However the tests I did showed that for the same listing, modified
merely to fit the correct syntax, that Qbasic was very slow.

> For example STOS BASIC uses the normal PRINT command, yet I can use

Yes there are _many_ ways of comparing basics. Again already sorted.

>

>all make a game, and STOS BASIC would stuff all the rest, including
>most none BASIC supposedly better languages, I think everyone in
>ATARIland would agree on that :)

This wouldn't constitute a fair test.

Breaking the basic down into a variety of areas, including:

math commands
string commands
graphic commands
sound commands

and then comparing the speed of each in _very_ simple tests (eg.
finding the square root of 5000 predefined numbers, using the BASICs
own command, or moving a 100*100 graphic area, 50 times).

> But if you then set a test that involves anything like GEM and STOS
>is stuffed,

I'm not 100percent sure, but I would guess the speed of GEM routines, is
more to do with the TOS/GEM version than the basic ?

> The only fair way would be to set catagories, set tests and only take
>the actual ascii BASIC listing, you compile and see which is best,
> Pure ascii listing means just that, no add ons :)

exaclty... adding Spriteworks to GFA, and various extensions to STOS
would probably invalidate any such tests.

>
>>STOS so much, you know far more than me... would you like to put

>yourself?, I will be there with my shiny trusty STOS disk :)
>
If I set it up myself.... then I'd need some people to advise me...
people who know each of their basics enough to help with the design of
the tests, to make sure they were fair.

If people wanna do that... then get in touch :)

As to contacting ICTARI.... oneday :)

ATb.

4267. Re-post: Info on two new Atari viruses: Pharaoh & Carpe Diem

Newsgroup: comp.sys.atari.st
Date: 1996-09-08 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.090896.201500.79@wxs2-14.worldaccess.nl>
Source record: 138343

Below you will find descriptions of two new viruses that have appeared on the Atari platform, analysed and included in the "Ultimate Virus Killer" version 6.9 in the past few days. This has been posted earlier, but some people have requested this info to be re-posted. So here goes...

Name: Official name of the virus. When several different versions of one virus exist, their difference is indicated by one additional character - "A" for the earliest or most widely spread version, "B" for the next, etc.
Type: The description of the virus fitting the most common virus classification.
Discovery date: The date when the virus was earliest reported to be seen. If the discoverer is known, his/her name is added between brackets.
Virus can copy to drive(s): This indicates to which drives the virus can copy itself. "Current drive" implies that the virus copies to the drive that is currently in use of the ones listed.
Virus attaches itself to: Here it is mentioned which system vector(s) the virus attaches itself to. When indicated to be 'undocumented reset-proof', this refers to the undocumented method for programs to become reset-resistant through the $12123456 method.
Disks can be immunized against it: Informs of whether a virus cannot be immunized against, or whether it can be immunized against. In the latter case, it is indicated how one can immunize against it. The format of the immunization method is: Offset (hexadecimal), Byte/Word/Longword, and the hexadecimal value expected at that offset.
Disks can be immunized with UVK: Indicates whether or not a particular virus' immunization was capable of being including in the "Ultimate Virus Killer" advanced immunization method.
What can happen: Lists the effect that the virus is programmed to cause to occur.
When does that happen: Specifies when the above will happen (ahem).
Reset-proof: Tells you whether or not the virus can survive a warm reset.
Can copy to hard disk: Tells you...er...well...this is pretty obvious, actually.
Remarks: Here all the other things worth mentioning are summed up.

Virus #94

Name: Pharaoh Virus.
Type: Memory-resident reset-proof bootsector call virus.

Discovery date: Spring 1996.
Virus can copy to drive(s): Current floppy drive (A or B).
Virus attaches itself to: Hdv_bpb, resvector and undocumented reset-resistant.
Disks can be immunized against it: Yes, though it is not known exactly how.
Immunizable with UVK: Very likely. It copies to none of the immunized disks I tried to have it infect.
What can happen: Noise is made, as well as a high frequency sound.
When does that happen: After five copies have been made.
Resetproof: Yes.
Can copy to harddisk: No.
Remark: A particularly devious virus, which uses two 32-bit random values to double-encrypt itself. It can also start at 13 different locations in the bootsector, and the initial instruction can be one of 2048 different ones. This results in a total of (2^32) * (2^32) * 13 * 2048 different versions that it can make of itself (when multiplied that's 4.9112611*10^23...). It is also MS-DOS mimicking.
It was sent to me anonymously, with an Arnhem (Netherlands) postmark. The virus is Falcon-compatible but does not copy to high density disks. As it fiddles around with BPB FAT values, programs such as "FCopy" and "Knife ST" may fail to operate properly on infected disks because they may find the manipulated BPB values hard to swallow.
It is also known as "The Curse Virus" or "Klatwa Virus" (this is Polish for "Curse", and was used to make it appear as if it was written in Poland).
Disks once infected with the "Pharaoh Virus" will never be completely regular because of the virus having rearranged various values in FAT and BPB. Copy all files you need to retain off them, then perform a soft or hard format, and copy the files back.

Virus #95

Name: Carpe Diem Virus.
Type: Memory-resident reset-proof bootsector virus originating from a Trojan Horse.
Discovery date: Spring 1996.
Virus can copy to drive(s): Current floppy drive (A or B).
Virus attaches itself to: Hdv_bpb, resvector, vbl and undocumented reset-resistant.
Disks can be immunized against it: No.
Immunizable with UVK: No.
What can happen: The text "BO[BJOF" appears at the top left of the screen. Your computer can crash.
When does that happen: The text is displayed 2048 vertical blanks after system start-up (on a 50 Hz colour monitor that would be after about 40 seconds). The crash can (and will) happen any time after that.
Resetproof: Yes.

Can copy to harddisk: Yes, but only in a file form ("~.PRG", see below).
Remark: This virus has an interesting history. It originally came in a ZIP archive called "CARPDIEM.ZIP". It contained a file called "CARPDIEM.PRG" (normally 91,750 bytes in size) and a small text file with the contents "Sease the day, and run this great falcon enhanced game!!" (sic). Upon running this 'game', nothing would appear to happen (though a quick eye would see the text "Ruth Marcs Development Inc. (Dedicated to the memory of Lucky Lady)" flicking on and off the top of the screen). The 'game' wouldn't run, and the desktop would be displayed again. The virus, however, would have installed itself in memory and on the current floppy disk, and would have written the "~.PRG" file (see below) in C:\AUTO\. Useless, the "CARPDIEM.ZIP" file and related items would be thrown away. So this virus actually arose from what is commonly known as a "Trojan Horse". Even if you'd get rid of all virus occurrences on floppy disks, the "~.PRG" file would reinstall it on floppy every time you reboot. Likewise, the floppy version of the virus would reinstall the "~.PRG" file! So it is quite impossible to let the "Ultimate Virus Killer" on its own completely get rid of the virus for you.
HOW TO PROPERLY GET RID OF THE "CARPE DIEM VIRUS".
You have to remember that, on an infected system, there are a potential number of three copies of the virus: One on your floppy disk, one in the hard drive C:\AUTO\ folder and one in memory. These are the steps:
1) First you have to reboot without a disk, or with a disk that is guarenteed to be virus free. Turn your system off for half a minute. This will get rid of two of the possible three copies of the virus in your system (in memory and on floppy). Make sure the floppy disk is write-protected.
2) Turn your computer back on. Press [CONTROL] during the booting process. This way - at least with the Atari hard disk driver - the hard disk will be installed and accessible, but the programs in the \AUTO\ folder will *not* be executed. If you have another hard disk driver installed, simply try to bypass hard disk installation altogether (pressing [CONTROL], [LEFT SHIFT] and [ALTERNATE] simultaneously usually ought to do the job) and install the hard disk driver from floppy. This, too, will not install any of the \AUTO\ folder programs. If you have a Claus Brod hard disk driver installed, all you need to do is simply boot off another partition, like D:.
3) Now you have to get rid of a file called "~.PRG" in the \AUTO\ folder of hard disk partition C:. It can't be located anywhere else. Unfortunately, the file is hidden. That means you can't delete it until you can see it, and you can't normally see it. There are probably quite a few ways to delete it:
i) With "GfA Basic". Go into "direct mode", "chdrive" to drive C and "chdir" to the \AUTO\ folder. Now, with "files", you can display the full directory, including hidden files. You can now

use the "kill" command to delete "~.prg".
ii) With the alternative file selector "Selectric". Turn the "display hidden" option on, and simply delete the file from "Selectric" itself. "Selectric" can be started from the desktop, without needing to start it from the AUTO folder. You might have to switch to a higher resolution first, though.
iii) In the absence of the two options mentioned above, you can use any command line interpreter (such as "COMMAND.PRG"). These may not allow you to delete the file, but this is no problem. Using the "ren" command you can rename the file, for example to "file.xxx". This will not remove the file from the \AUTO\ folder, but will render it completely harmless - after all, only programs with the "prg" extension are executed when the \AUTO\ folder is invoked.
4) Now, with a clean and uninfected system, you can get rid of all occurrences of the virus on all your floppies with the "Ultimate Virus Killer".
IMPORTANT: The floppy-based version of the "Carpe Diem Virus" is recognised without further ado. To recognise the tiny (1024-byte) "~.PRG" file from the link virus check (both the "CARPDIEM.PRG" mother file and the "~.PRG" file are recognised, regardless of what name they might currently have) you have to set the lowest limit of the link virus check to 1 Kb (this will cause only files below 1 Kb not to be scanned). By default, this value is set to 3 Kb, which would cause the "~.PRG" file to be skipped. The lowest link virus check limit can be altered by means of the "UVK.CNF" file (see the appropriate manual section). A line containing ".001" (without the quotes) added at the end of the file (using a text editor, for example) will do the job.

Can copy to hard disk: Tells you...er...well...this is pretty obvious, actually.
Remarks: Here all the other things worth mentioning are summed up.

Virus #94

Name: Pharaoh Virus.
Type: Memory-resident reset-proof bootsector call virus.

Discovery date: Spring 1996.
Virus can copy to drive(s): Current floppy drive (A or B).
Virus attaches itself to: Hdv_bpb, resvector and undocumented reset-resistant.
Disks can be immunized against it: Yes, though it is not known exactly how.
Immunizable with UVK: Very likely. It copies to none of the immunized disks I tried to have it infect.
What can happen: Noise is made, as well as a high frequency sound.
When does that happen: After five copies have been made.
Resetproof: Yes.
Can copy to harddisk: No.
Remark: A particularly devious virus, which uses two 32-bit random values to double-encrypt itself. It can also start at 13 different locations in the bootsector, and the initial instruction can be one of 2048 different ones. This results in a total of (2^32) * (2^32) * 13 * 2048 different versions that it can make of itself (when multiplied that's 4.9112611*10^23...). It is also MS-DOS mimicking.
It was sent to me anonymously, with an Arnhem (Netherlands) postmark. The virus is Falcon-compatible but does not copy to high density disks. As it fiddles around with BPB FAT values, programs such as "FCopy" and "Knife ST" may fail to operate properly on infected disks because they may find the manipulated BPB values hard to swallow.
It is also known as "The Curse Virus" or "Klatwa Virus" (this is Polish for "Curse", and was used to make it appear as if it was written in Poland).
Disks once infected with the "Pharaoh Virus" will never be completely regular because of the virus having rearranged various values in FAT and BPB. Copy all files you need to retain off them, then perform a soft or hard format, and copy the files back.

Virus #95

Name: Carpe Diem Virus.
Type: Memory-resident reset-proof bootsector virus originating from a Trojan Horse.
Discovery date: Spring 1996.
Virus can copy to drive(s): Current floppy drive (A or B).
Virus attaches itself to: Hdv_bpb, resvector, vbl and undocumented reset-resistant.
Disks can be immunized against it: No.
Immunizable with UVK: No.
What can happen: The text "BO[BJOF" appears at the top left of the screen. Your computer can crash.
When does that happen: The text is displayed 2048 vertical blanks after system start-up (on a 50 Hz colour monitor that would be after about 40 seconds). The crash can (and will) happen any time after that.
Resetproof: Yes.

Can copy to harddisk: Yes, but only in a file form ("~.PRG", see below).
Remark: This virus has an interesting history. It originally came in a ZIP archive called "CARPDIEM.ZIP". It contained a file called "CARPDIEM.PRG" (normally 91,750 bytes in size) and a small text file with the contents "Sease the day, and run this great falcon enhanced game!!" (sic). Upon running this 'game', nothing would appear to happen (though a quick eye would see the text "Ruth Marcs Development Inc. (Dedicated to the memory of Lucky Lady)" flicking on and off the top of the screen). The 'game' wouldn't run, and the desktop would be displayed again. The virus, however, would have installed itself in memory and on the current floppy disk, and would have written the "~.PRG" file (see below) in C:\AUTO\. Useless, the "CARPDIEM.ZIP" file and related items would be thrown away. So this virus actually arose from what is commonly known as a "Trojan Horse". Even if you'd get rid of all virus occurrences on floppy disks, the "~.PRG" file would reinstall it on floppy every time you reboot. Likewise, the floppy version of the virus would reinstall the "~.PRG" file! So it is quite impossible to let the "Ultimate Virus Killer" on its own completely get rid of the virus for you.
HOW TO PROPERLY GET RID OF THE "CARPE DIEM VIRUS".
You have to remember that, on an infected system, there are a potential number of three copies of the virus: One on your floppy disk, one in the hard drive C:\AUTO\ folder and one in memory. These are the steps:
1) First you have to reboot without a disk, or with a disk that is guarenteed to be virus free. Turn your system off for half a minute. This will get rid of two of the possible three copies of the virus in your system (in memory and on floppy). Make sure the floppy disk is write-protected.
2) Turn your computer back on. Press [CONTROL] during the booting process. This way - at least with the Atari hard disk driver - the hard disk will be installed and accessible, but the programs in the \AUTO\ folder will *not* be executed. If you have another hard disk driver installed, simply try to bypass hard disk installation altogether (pressing [CONTROL], [LEFT SHIFT] and [ALTERNATE] simultaneously usually ought to do the job) and install the hard disk driver from floppy. This, too, will not install any of the \AUTO\ folder programs. If you have a Claus Brod hard disk driver installed, all you need to do is simply boot off another partition, like D:.
3) Now you have to get rid of a file called "~.PRG" in the \AUTO\ folder of hard disk partition C:. It can't be located anywhere else. Unfortunately, the file is hidden. That means you can't delete it until you can see it, and you can't normally see it. There are probably quite a few ways to delete it:
i) With "GfA Basic". Go into "direct mode", "chdrive" to drive C and "chdir" to the \AUTO\ folder. Now, with "files", you can display the full directory, including hidden files. You can now

use the "kill" command to delete "~.prg".
ii) With the alternative file selector "Selectric". Turn the "display hidden" option on, and simply delete the file from "Selectric" itself. "Selectric" can be started from the desktop, without needing to start it from the AUTO folder. You might have to switch to a higher resolution first, though.
iii) In the absence of the two options mentioned above, you can use any command line interpreter (such as "COMMAND.PRG"). These may not allow you to delete the file, but this is no problem. Using the "ren" command you can rename the file, for example to "file.xxx". This will not remove the file from the \AUTO\ folder, but will render it completely harmless - after all, only programs with the "prg" extension are executed when the \AUTO\ folder is invoked.
4) Now, with a clean and uninfected system, you can get rid of all occurrences of the virus on all your floppies with the "Ultimate Virus Killer".
IMPORTANT: The floppy-based version of the "Carpe Diem Virus" is recognised without further ado. To recognise the tiny (1024-byte) "~.PRG" file from the link virus check (both the "CARPDIEM.PRG" mother file and the "~.PRG" file are recognised, regardless of what name they might currently have) you have to set the lowest limit of the link virus check to 1 Kb (this will cause only files below 1 Kb not to be scanned). By default, this value is set to 3 Kb, which would cause the "~.PRG" file to be skipped. The lowest link virus check limit can be altered by means of the "UVK.CNF" file (see the appropriate manual section). A line containing ".001" (without the quotes) added at the end of the file (using a text editor, for example) will do the job.

Dan Phillips (xiting@worldnet.att.net) wrote:
:
: Actually, I'm having a little trouble with FSERIAL. (And I'm usually
: pretty good at hacking through this stuff). Okay, I use FAST_SER.PRG in
: my AUTO folder, I use FSERIAL.CPX, and I'm using HSMODEM6. With FSERIAL
: loaded, Stalker no longer works, even if I set it exactly like MODEM.CPX
: was before loading FSERIAL. The modem won't pick up the line or dial.

AFAIK, Fserial is it's own package made to run w/ the serial port.
HSModa06/07 is yet another. Try not loading HSModa when you run Fserial
and vice versa. Of course, the software may not be set to act on the
right serial port, if the modem won't "start."

To experiment effectively, you'll need to isolate the problem as much as
possible, then tweak just one thing at a time to see the effects. Also,
using this same method, you may also discover Grand Unification Theories,
though not necessarily with Fserial or HSModa (they could work out
to be minor parts of it).

Bob, doesn't this spectrograph look kind of like an

m> upgrade board with extra sockets.

BE VERY CAREFUL WITH THIS! I had an AERCO in my old 520ST some years ago; I found out the hard way that if you don't cut all the required traces when going from 2.5 to 4 megs, you can totally destroy /all/ memory in your computer. It cost about $400 to get it fixed at that time. Now I'd know how to fix it myself (and the chips are nearly free, if you can find 'em), but OTOH, it's probably not worth the effort, with used STes available.

If you're using NOS, ftp to the server and use the DELE command, as
in:

ftp>dele filename.htm

Not sure if there's an equivalent in ICE, MGFTP doesn't seem to do it
either. I suspect that the MiNTnet FTP client will work OK too.

>>>>>>>>>>>>>CAB trouble shooting<<<<<<<<<<<<<

Just like so many other users, it took me long time and dozens of phone calls
to get CAB working on my STe with TOS2.06.
I have a simple set up including HSMODEM6, STIK108 and CAB131.
It was not too difficult to get STIK connected. Having tried my provider and my USR
28.8 modem on a Mac beforehand I was familiar with passwords, server name and so on.

But attempting to get CAB catching any URL on the web just produced a kind of
loop each every time with CABs "Receive Data" dialog flikkering endlessly.

I was lucky however some day to read something about TCP configuration in a PC
magazine.
In STIKs DEFAULT.CFG, the comments suggest that you would better leave the
TCP parameters commented out. ('They default to sensible value.....').
So I had tried any possible parameter combinations exept those TCP values.

Following the PC magazine advice, I tried MSS=1024 and RCV-WND=4096.
A third parameter, MTU=1524 is defined according to my provider.
With those values, CAB seems to behave perfectly. I enjoy problemless surfing now.

What I read in the magazine was just that MSS (segment size) must be less than
MTU minus 40, and that RCV-WND (receive window) should be 4*MSS.

While enjoying CAB I still cannot get anything out of ANTMAIL-079 except
a 'Trouble with password' message. May be because my provider has a PAP (password
authentication procedure) which is not recognized by Antmail?

| Yes, but even if it did have all the lines, like the falcon,
|
|
Even the Falcon does not have all the lines. I own one, and have verified this by comparing the pinouts at the back of the owners manual to the pinouts for standard parallel, ECP, and EPP ports on a PC. In all cases, anywhere from one to three of required lines for non-printer use are missing from the Falcon's port.

Well, not in the sense of really paying much attention to the market
or the newsgroups... yeah, I've kept several programs for the
gemulator, but I had been "collecting" this mass of atari stuff for
years. I *loved* CAB and antmail, but have to admit I like IE 3.0
better. (Much as I dislike Microsoft.)

Yeah, gemulator might be a bit faster without Windows 95, but it is
still a lot faster than my 8mhz ST. I wish the screen update was a
bit faster, though and it would be nice if gemulator would actually do
the TT Resolutions as advertized, but all in all, I'm happy...

Take care,
Jeff

True, if you want to run a word processor or spreadsheet. On the other hand, try running Cubase Audio or any other integrated MIDI and digital audio program on a Windows machine. You'll get timing errors, glitches, etc., unless you've bought expensive hardware (Spectral or Soundscape, for example)

> Unless you are within some rather restricted niche market, the
> Atari's austerity benefits have been neutralized by platforms
> that , while being bloated and relatively inefficient, at least
> progress. All Atari can come up with is vapor (as always).

Well, you may be right about most applications, but for digital audio, here are a couple of new programs/hardware additions that have come out relatively recently:

-Line Audio designs Jam in 8 and Jam out 8 audio expanders for the Falcon
-Sunrise audio interfaces for the Falcon, 8 input/8 output expander
-SoundPool's ADAT interface, allowing digital transfer of audio (8 tracks) from the ADAT to the Falcon in real time.
-SoundPool's Audio Tracker and Mastering software for multi-track recording and editing.
-SoundPool's CD-R program for the Falcon.
-Blowup FX Falcon speeder program.

Hey, as I keep saying, figure out what software you want to use, then figure out the best platform. The Falcon is still the most cost effective and reliable platform for integrating audio and MIDI.

4278. gcc include file problems

Newsgroup: comp.sys.atari.st
Date: 1996-09-08 00:00:00 UTC
From: orb@u.washington.edu
Message-ID: <50ve4a$spq@nntp5.u.washington.edu>
Source record: 138354

I recently downloaded gcc from atari.archive.umich.edu along the all the other necessities. Everything appears to work but the include files produce errors when I try to compile anything.

For example, stdio.h gives lots of parse errors and warnings about "data definition has no type or storage class". Is anyone else having problems with gcc?

The include files are from atari.archive in the atari/Gnustuff/Tos/Include directory. I'm using gcc on a TT030 with TOS 3.06. I have got a simple "hello world" program to compile when i don't #include any other files.

thanks
-kyle

> software and how much would these cost?

There are a couple of ways. The most important things to
compare are: Number of simultaneous recording tracks (Falcon
offers 8 with a $400 piece of external hardware), number
of playback tracks (Falcon offers 8 no compression, 16 with
2:1 compression), and number of outputs (Falcon offers 8
with $400 box), balanced or unbalanced ins/outs.

1. Run Pro Tools III and Cubase Audio on the mac. (if you have
Mac already, you'll pay around $5k for the hardware.

Adv: You'll get 16 uncompressed audio tracks playback with
this. Very reliable, easy 8 track simultaneous record,
quicker wavform redraws then the Falcon, sounds good,
good editing environment, solid audio sync, balanced,
TDM internal effects.
Dis: Hard to set up with Cubase Mac, EXPENSIVE, Cubase Mac
is a little buggier then CAF, MIDI timing is not rock solid.

There's also the cheaper Pro Tools Project setup for Mac or
PC, but your limit is only 8 tracks playback, it's difficult to
setup (this is around $2500 + computer).

2. Upcoming Korg PCI card with Cubase Audio on the mac (around
$1200 + computer when it makes it to market)

Adv: It will allow 8 track simultaneous recording, but ONLY
through and ADAT or ADAT a/d replacement converters. Otherwise,
only 2 tracks simultaneous recording (+ 2 more if you buy an
external A/D converter).
Dis: It doesn't exist yet. Unbalanced ins/outs. You must have
a ADAT to get 8 track recording. No software supports it yet
(although Deck II supposedly will when it comes out). MIDI
timing is still often an issue on the Mac. Card is in the
computer, so it's a little noiser.

3. Digidesign Audiomedia III for PC (around $700).

Adv: Cubase will eventually support it, probably
Dis: Doesn't work with Cubase Audio at all yet, because you can't play back recorded tracks while recording new tracks yet. Unbalanced inputs and outputs. 4 inputs and outputs maximum with addional hardware needed for 2 ins and outs. Card is in the computer, so it's a little noiser.

4. Yamaha CBX D-5 ($1500) and/or D-3 (800)

Adv: D-5 sounds great, built-in effects (OK quality), external unit.
Dis: Really tough to setup with Win95, D-3 is unbalanced with a high noise floor, some people can not get either to play back more then 2-3 tracks, SCSI 1 device.

There are other good external devices that can sync to a computer and sequencer, but that's not really integrated audio and MIDI, as you cannot move around the MIDI tracks on a computer screen, you have to setup tempo maps, etc.

Soundscape supposedly will be supported by some sequencers in the not too distant future. This is an attractive option for PC owners (4 track record/8 track playback, $3000).

There are a lot of stand alone sequencers that use sound cards on the PC to achieve up to 24 track playback, but you're limited to 2 tracks of input and output, making mixdown difficult (adding effects, eq, etc).

Anyway, that's my two cents..

4280. test of differents emulators

Newsgroup: comp.sys.atari.st

i have been tested 3 emulators on my p.c. tos2win,gemulator 96,and magic
pc
(demo version)
the ratio of compatibility is under at 10%
every atari software then i've been tested not works at 90%
well ! this is my questions :
1) if i had the rom card with G.E.M. in my p.c. they are much
compatibility with these 3 emulators ???

2)they are anybody here can i have 1 of these 3 emulators whith G.E.M.
card
and what are the compatibility ??

3) what of these 3 emulators is better

4) thank's to all for your answer because i want to buy this solution but
the report of compatibility in demo version does not seduct me !

5) excuse for my little english i'm french !

BYE ALL ! FROM DDRCREW !

x > circuit boards, plus packaging, plus the time to design.

I've noticed much the same; even the boards out in Europe start running, after currency adjustment, around $100-120 Canadian.

Now Systems For Tomorrow/chro_Magic is also offering the RAM Gizmo unpopulated for $49 US as well as the 14 meg/$199 offer - they had also put in the $49 offer last May, which is the route I decided to take (after all, my brother's a service technician for the Mac/PC computer store at York University, and was able to get me some good branded RAM with a warranty on it). Though I wish I had waited for that 14M special :(. The only problem for Pekka, though, is that it only takes the 4meg/30 pin SIMMs, which tend to be more expensive for purchase than the 72-pin variety.

The Gizmo I decided to go for because everyone who I know who owns a Falcon in Toronto went with that board for their upgrade and reported absolutely no troubles installing it (except for the matter of a few who had to disconnect & remove the internal speaker, but that's really not that much of a loss) :) I certainly don't regret buying it.

Source record: 138358

> : I bought mine). I must admit that I feel safer running a sequencer on
> : my st than on any 133 MHz pentium.

I've got sick'n'tired of this computer platform bashing from people who
don't know a shit about real life work with those machines!
I have run "evolved" through Cubase 1.0 (Atari STFM 1040) via Cubase 2.0
and 3.0 and Score (Mega ST 4 & SM194) via Cubase Audio Falcon 1 & 2
(Falcon/16mb/FDI etc) to Cubase Audio XT 3.0x (P133/96Mb/Tahiti (soon
Pinnacle)/SCSI/etc.etc., and every time I have had the feeling that things
evolve towards better (and they do!).

But in practice the computer is not "seen" during heavy composition
process, so it really doesn't matter what platform you've got if you do
something with it instead just spend time with it.

OK, ok.. I'll shut up again for a few months.... :-)

Hello,
the company Hard- and Softwareentwicklung N. Wieczorek develops a network
interface with works with TCP/IP Protokoll. The interface can be connect
to the ACSI or SCSI port of an ATARI computer. For more information look
on the WWW page of this company: http://members.aol.com/norwiecz.

Depends on whether or not you have Link1 or Link2. If Link1, and your drive
parity can not be disabled then you have a problem. It wouldn't work for my
IBM SCSI as parity could not be disabled on the drive, so I went back to
AdSCSI+. Link2 solved this problem. Another difficulty could be power supply,
but I don't know enough, and don't own a Link to be able to help much there.

The article just said "a" free e-mails service. As long as there's not
alot of junk mail and it's just a small banner., then I can live with
that. At least the banners like what Yahoo has I can ignore. :)

> You should be mroe concerned about looking at Web sites, actually; if you use

Now that's the main concern the article had. At least using Lynx and CAB
doesn't give you any of these headaches. Sheez, even going on newsgroups
get you on somebody's mailing list. :P

As for using a fake address in the broswer, I might put in
billg@microsoft.com, cuz I'm sure everybody would want the business of
Billionare Bill! :)

Shouldn't high speed parallel be faster than 115 kbps? You may also find that the
L and P series Laserjets are just slow, on any computer. If you have less than 4
megs of real RAM in the printer, 600 dpi graphics will take forever and even text
can be slow.

I tried dumping HSModem after my last post and now Stalker tries to get going, but puts out garbled characters, so the modem doesn't know _what_ to do! Guess I'll have to totally strip the system except for FPATCH and FSERIAL/XCONTROL and see how it goes.

Of course hearing it doesn't make it so, but I thought I heard that Atari released it to public domain. Not that it's worth anything, anyhow...

I believe that if he bought a Falcon with a hard drive or an Atari hard drive kit, he is entitled to AHDI and future updates.

Software retailers will typically be willing to break consumer
protection law to your detriment. Software retailers, like most
users, probably are unaware the law to begin with, however.

Admittedly, the statement is unsupportable.

However, I still do assert that QA-Piracy is ethical.
The end result wrt the developer is the same.

You just don't have to twist any arms or threaten
litigation to ensure that consumer protection standards
are adhered to.

Valid point. I have never seen one in the US, so I didn't think of it.
Never knew it really existed for us. Do they provide 100% compatibility?
(Not that the Adspeed does either, but it's close).

Actually, the SLM 605 is still pretty fast for the price if your Atari is fast enough and has enough memory. Shoot, it's quite a bit faster than my LJ4P, especially to print the first page, and that's most of the time!

I set the clock back to one day after the release date of the demo; I then
downloaded a fresh copy from toad, unpacked it and attempted to run it.
Apparently it makes an entry somewhere in the Win95 registry (an entry which
I ahve not yet been able to locate, I might add), because it still came up
with a notice in German that the demo had expired on 31 August 96.

E> No sign of any August expiry of the MagiC demo. But of course I did

That's the same date as the one I downloaded msot recently.

E> Do make sure you installed Win32s, the 32 bit extension to Windoze
E> version 3.nn.

That's not required with Win95.

Fast-serial and HSModem have the same function, you do not need to use
both at the same time.

x> With FSERIAL loaded, Stalker no longer works, even if I set it exactly
x> like MODEM.CPX was before loading FSERIAL. The modem won't pick up the
w> line or dial. Any ideas?

As far as i remember, Stalker has his own serial routines. I do not think
Fast-serial or HSModem are useable with it. If stalker can't use those
drivers, I know that Connect and Starcall can easily.

Okay...now I've finally got a Falcon...
I've an older SCSI drive that'll suffice while I'm learning my
way around CuBase, but It's really old, and I'll be lucky to
squeeze 4 tracks out of the old slow drive.

So...what route have some of you taken on your choice of
hard drive. I'd like to pick something that'll handel as much
as CAF can dish out.

Removeable media is something very attractive to me...so I'd
like to start here...
Which ones DO NOT keep up with CuBase?
I like the idea of the EZ135 Syquest drive...or the IOmega ZIP drive
to begin with. Anyone tried these with CAF? Are they fast enough?

Other options?
Suggestions?

Thanks,
Brian

A> Adspeed STe by ICD. Where do I get this and how much does it cost?

I think I'm right in remembering that System Solutions still sell the AdSpeed. ISTR they've now dropped the T28 and T36 due to the manufacturer going down the tubes and have (somehow) brought back the AdSpeed for both STFM and STe for somewhere around 125ukp. I can't find the reference information that makes me say this though, so someone please correct me if I'm wrong.

q>
q>Dan

Last Friday I downloaded both the new Gemulator Demo, and the MagiC PC Demo.
Both were then unpacked, installed and given a quick run round the block, as you
might say, I like to get home in daylight. Took me a little under an hour to
figure out how to set them both up and get things moving.

No sign of any August expiry of the MagiC demo. But of course I did download it on Friday 6/9/96 so perhaps it is a more recent version.

Do make sure you copy the Gemsys folder to the root directory of your <c:> drive, use a floppy. I did another installation on a friend's PC, he has his big roomy disk as D: and the smaller original drive on his ageing 486DX33 is C:.

Do make sure you installed Win32s, the 32 bit extension to Windoze version 3.nn. if you are not running < last year's Windoze ;-) > .

The Gemsys folder is >500K, not everybody's perfect email.

the Gemulator demo is available from < http://www.emulators.com >

Magic for PC demo is now available from Toad ftp site.

< ftp://ftp.toad.net/pub/atarist/swdemos/mgpcdem.exe >

Hope this helps

q>1040 I might add. For any help on this... THANX!!!!

Try copying the files to Double Density disks, the ones with only one hole.
Format them to 720Kb, in file manager select from the disk menu, < format disk >
then from the capacity box select < 720K > , then OK. These disks should be no
problem for transferring files to the ST. The ST cannot read High Density disks,
the ones with 2 holes, one of which does not have a little sliding block.

4320. TRS-80 emulator update

Newsgroup: comp.sys.atari.st
Date: 1996-09-09 00:00:00 UTC
From: Sander Berents <s.j.berents@fys.ruu.nl>
Message-ID: <32340867.5CBA@fys.ruu.nl>
Source record: 138284

VERSION 0.6 OF TRS-80 EMULATOR FOR ATARI COMPUTERS AVAILABLE

Now you can download the TRS-80 model III emulator version 0.6. The package includes basic programs, machine language programs and NEWDOS/80 on 3 virtual disks. It also has a MagicMac compatibility mode and runs in all monochrome video modes. To download it go to the Atari page of
http://www.pi.net/~volatile/

The package now consists of two .ZIP files. TRS80V06.ZIP contains the minimum configuration. TRS80X06.ZIP contains conversion software and software for exchanging files between the Model III and your Atari. It also contains extra documentation.

Changes:
- Support of all monochrome video modes starting with ST high;
- Support of virtual disks with any number of tracks and sectors per track.
- ROM tape routines rerouted to disk file. This could be used by Tape to Disk copy programs. Note that the current optional CLOAD, CSAVE and SYSTEM rerouting is not changed;
- Snapshot loading/saving added. Memory, registers and options are saved;
- Changed settings on NEWDOS/80 disk. Disk 3 now defined as SS/SD disk for Model 1 disks;
- Startup message;
- NEWDOS/80 info translated to ASCII
- 2nd Connection and 2nd Convert added to the package;
- Manual, BASIC manual and other info included.

Using the included SPEED.BAS the following speed results were obtained (all numbers relative to a 2 Mhz TRS80 model III)

Tested item	ST	STE	Falcon16	TT*	630**
Integer	43	85	83	170	510 %
Floating Point	32	59	60	121	392 %
Memory	45	86	88	182	530 %
Text	170	311	311	530	1766 %
Scrolling	60	131	217	333	714 %

* TT RAM
** Apple Performa 630 running MagicMac 1.2.5
(for these tests the options "disk system" and "speed adapt" were disabled, "video acceleration and clock adapt" were enabled. The real time clock was set to "normal")

Send an email to me if you want to be added to the 2nd Life mailinglist. I will use this list to notify you about new updates, tips and tricks.

s.j.berents@fys.ruu.nl

... Centurion Ministries ...

Centurion Ministries is a Christian Ministry enabling evangelical
Christians and familes, to use and own computers.

We receive donated computers and equipment, ensure that they
are workable, and then pass them on, according to a waiting
list.

We are looking for IBM systems and peripherals-- any will do --
as well as some of the classic systems; TI-99/4A, Apple II,
Commodore, Amiga, and Atari ST.

Centurion Ministries is a legitimate ministry, subject to, and under
the authority of the Elder's Board of El Shaddai Christian
Fellowship Church. As such, all donations can be used as a tax-
write-off.

We are always in the need for computers and equipment.
If you have any items to donate, please contact via email:
ab453@cleveland.freenet.edu

Thanks for your time. Take care and God Bless!

Regards,

James Walter Krych

4323. Re: Oasis v2.06...When?

> Thats great! Hope it supports PPP correctly, and squashes all those
> bugs! I'm really looking foward to it! :)

New in ICE since the last beta OASIS2 release:

1.61

- TCP checksum error problems fixed 100%
- News History file update for numerical format.
- All IP routines now in machine code.
- FTP now supports use of anon as well as ftp as a username.
- When an 'IP: Bad checksum' error message is displayed the ERROR_PING
flag is not picked up and no ping is generated - fixed.
- ICE Usenet Window does not always display contents - fixed.
- Clock adjustment code implemented in ICE.
- Mail index system implemented.
- Neil Martins' "Incoming news keeps stalling with bad packet (IP)
errors (PPP)" problem has been cured by installing HSMODA07 on his TT.
- IP: bad checksum bug when after starting a SLIP connection or bad
packets when a PPP connection is started - fixed.
- When ftp'ing to Demon's WWW homepages ICE no longer gives error 550
(Access Denied) as soon as the home directory is entered.
- Error 008 in ICE when sending a 251k news binary and bringing in a
283k email. After error 008 crashes back to MagDesk, even throwing
Thing out, and locks the Falcon solid - Fixed.
- Ftp upload options now active.
- When making an Ftp upload the filenames can be set to be in lower or
upper case.
- Mail packet queue now limited to 7k held at both ends of the link.
- Ftp multiple directory redraw problems cured.
- R/S 'light' flickering fixed.
- Adjustment of receive data window size inceases throughput
dramatically.
- TT memory problems illiminated.
- Telnet ANSI (colour) (inactive).
- SNOW beta released.
- Dynamic TCP window allocation.
- Two ftp bugs fixed.
- News routines turned partailly into machine code.
- Ftp division zero bug fixed.
- Error bell operation cleaned up.
- ICE loading dialog added.

New in OASIS2 since the last beta OASIS2 release:

2.06

- Font size controls added to Oasis.
- Complete MIME send routines (Partials created Automatically) with
iconic control panel.
- GMT offset system recoded - now does not reset system clock.
- Send MIME bugs fixed when using external editor.
- Not enough disk space when unbatching news no longer results in the
incoming mail being deleted.
- MIME partial size selectable.
- 'Mail To:' support added for MIME. **
- OutMail now shows outgoing MIME files correctly. Will be added to the
Internet Window. **
- In the Outbound window - Window header should changed to show 'outbound'.
- Time / Datestamping of files.
- MIME partials marked as expired once processed into a single MIME.
- 'A' flag now indicates in the mail window that an automatic Oasis
function has occured.
- Local time shown in the newsgroup details dialog, but GMT still written
to the groups file.
- Spell checker added to OasisEd2.
- De-fragging system built in to Oasis to stop problems when unbatching
news.
- Implemented use of SHIFT HOME to move cursor to the bottom of the mail
and news windows.
- Two bugs from: Stephen Mulrine <robotron@moroder.demon.co.uk> fixed:
- If an outgoing mail message has a line beginning with a dot, the dot
will vanish in transit.
- If an incoming mail message has a line beginning with a dot, an extra
dot will appear (I assume).
- Defragging routines debugged.
- Unbatch variable bugs fixed.
- Resources updated.
- Newsgroup file size shown in the Group Maint window (Kbytes).
- MIME send to multiple address bug fixed.
- Support for mail index implemented.
- Notification of new emails for each user.
- Mail save bugs fixed.
- Overview bug fixed when adding users to yellow pages from news.
- Reply to Thread bug fixed.
- Window handling bugs fixed with respect to font window.
- Folding bugs fixed.
- Crashing after selection new user after opening font window fixed.
- Trim bugs in MIME fixed.
- EOF mail indexing bugs fixed.
- Anon-Server support added.
- Anon support added in for news.
- Blank line bug in Anon headers fixed.
- Folded lines in headers now end with a comma to eliminate the parse
errors on e-mails.

- News posting problem (introuced in 24/8/96 version) fixed.
- Group Details dialog performance improved (not changed).
- Add new groups bug for multi-users fixed.
- Oasis.news group added for storing copies of outbound news.
- Group details dialogue reworked in operation.
- Path change bug after running a FROND - fixed.

** = In progress and will be completed before the next package release.

Could it be a memory problem ? How much do you have ?

When I first installed GCC (on a 4 mbyte STFM) I got similar errors.

I did not have the '\TEMP' directory set correctly.

>q>1040 I might add. For any help on this... THANX!!!!
>
>Try copying the files to Double Density disks, the ones with only one hole.

I cannot believe the original poster is asking how to copy files from
PC to ATARI, he says he can only find something from ATARI to PC, if
he where asking for info on disk formatting, surely the disk that
takes stuff from atari to pc will also take stuff back from pc to
ATARI??
More likely he wanted to know how to convert the file formats PC to
ATARI, every single answer has been how to make a disk compatable
between the 2, but missed the fact the guy said he already found ST to
PC,

There was a posting about a month ago, from a pc owner who had a st,
and now has tons of pi1 pictures, how to convert them to pc format,
about a dozen answers told him to use gemview or imagecopy.... but
missed the point that he "had" an st,
I am looking for something simmilar so followed the thread, but no
real answer,

Cheers.............!ynoT

Quite a bit more than you do. At least there is a method to my
madness.

>By defending pirating, they make people realize what kind of persons they are.

Even if I am the most vile scum imaginable, THAT does not automatically
discount my ideas. Some scum at least have the capacity to be logical
and consistent as well as actually think out the 'venom' they spew.

Any good idea, without sufficient justification, deteriorates into
a bad idea and becomes worse than even a bad idea that has better
justification.

You, on the other hand can only make logically baseless accusations
and DISCOURAGE more ethical behaivor.

You're good at guilt by association too.

The Kung' don't miss amenities such a running water and such either...

For general use, even despite PC system/application software bloat,
one can build a quite usable PC for quite a bit less than one can
buy a Falcon. Then, there is that daunting task of finding a Falcon
(mail order & overseas mail order don't count) or any hardware or
software for it.

In 1988 PC's could be easily equipped to do 256 colors. The STe
came along quite a bit longer than that.

Furthermore, ragging on the Amiga does not do squat for your point.
"Gee Atari sucks... so does Amiga..."
Furthermore, the Amiga was not limited to the 500+. There was quite
a bit more system evolution on their side. Attempting to make such
comparisons only makes the Atari look foolish.

MOST developers sell _crap_ for software & support.

>
>2. Using commercial software you have not purchased is wrong.

This is true in general.
This is not true universally.

Using unlicenced commercial software that you derive utility
from is unethical/wrong.

>
>3. Using pirated software does not always hurt the developer of said
>software.

Agree.

>
>4. It's still wrong to do so, however.

True in general.
Not true Universally.

If you hold a valid licence, using a cracked copy of the package
is ethical.
If your intent is to determine whether or not that package meets
your needs (ala shareware) than it is ethical.
All is is unethical.

>
>5. It would be _real_ nice to be rid of software protection, esp.
>the more intrusive ones.

Most heartily agree.

This is a matter of law, not opinion.

>
>8. We users have to get a lot tougher with software
>developers/vendors, and demand to get the products & services we
>think we are buying.

Users should not take any crap with regard to software.
They should be quite willing to return ANY software which
is of poor quality or any software that does not deliver
on its promises (specs) and sue any merchant/publisher
that does not comply.

The state of software quality is partially the responsiblity
of consumers. The producers are given little incentive to
produce quality output. They exist in a market which currently
does not hold them accountable for the quality of their output.
Only when producers are held accountable for poor quality product
will software quality improve.

Users should make themselves aware of the rights they posses under
their local consumer protection and business standards laws. One may
find that one's rights are more extensive than conventional sources
would leave one to believe.

>
>9. Software protection a)never b)seldom c)often prevents the theft
>of software.

Seldom. On Dongles: The market segments which seem least
likely to pirate appear to be the ones subjected to
dongles. If those applications appeal in the slightest
to pirates, they have been , most probably, cracked.

i have been tested 3 emulators on my p.c. tos2win,gemulator 96,and magic
pc
(demo version)
the ratio of compatibility is under at 10%
every atari software then i've been tested not works at 90%
well ! this is my questions :
1) if i had the rom card with G.E.M. in my p.c. they are much
compatibility with these 3 emulators ???

2)they are anybody here can i have 1 of these 3 emulators whith G.E.M.
card
and what are the compatibility ??

3) what of these 3 emulators is better

4) thank's to all for your answer because i want to buy this solution but
the report of compatibility in demo version does not seduct me !

5) excuse for my little english i'm french !

BYE ALL ! FROM DDRCREW !

If you want to get more of a response, you might consider posting
this message to comp.music.midi, alt.steinberg.cubase, or
rec.audio.pro (places where they probably know little of the
Falcon but much about other systems).

In rec.audio.pro, they pretty much laugh about the Falcon, because
they tend to be pros in the audio industry who use high end tools
costing many thousands, and don't integrate MIDI and digital
audio. Although there are people out there using the Falcon
in pro situations, I believe its forte' is in the home studio,
where its ease of use makes up for it's lower speed then the
super digital workstations like Pro Tools.. (I'd hate to have
expensive union talent waiting around and a client looking over
my shoulder while my Falcon takes a minute or so to draw a 5
minute stereo wave file). On the other hand, when (if?) a good
040 upgrade comes out that's compatible with CAF, look out..

4335. Need help restoring MEGA ST/4, Falcon

Newsgroup: comp.sys.atari.st
Date: 1996-09-09 00:00:00 UTC
From: pmarton@bgnet.bgsu.edu
Message-ID: <pmarton-0909961520030001@m34-35.bgsu.edu>
Source record: 138299

Hello, all.

Preamble: I went through 3 Ataris (400, 800XL, and a 520ST) back in the 80's, and had to ditch the ST from lack of space last year (hey-- I'm a college student.)

Now, I'm taking some computer art classes here at Bowling Green State University and we're working on... STs. Boy, was *I* surprised to back in TOS after years of Mac/Windows/X.

Problem: They're really slow, and I'm trying to speed them up. We're using Degas Elite and Cyber Studio CAD-3D (with those nifty LCD/shutter glasses!), and running them off floppies (and then later running the animations) is dog slow. We have an old ST (Supra?) HD that connects and powers up, but after "Loading TOS" I just get 2 bombs.
So... is there any software out there I can use to try and make this disk setup work? I don't know anything about ST disk hardware after the 520, but I'm guessing it's a SCSI drive by the number wheel on the bottom.

I haven't started working on the Falcon yet, but any pointers would be appreciated.

Yes, I have read through the FAQ(s) and have been reading the newsgroups for about two weeks, and since this topic hasn't come up I felt it was a good time to ask. Thanks in advance, and I read news every day so email isn't neccesary.

Thanks,

Pete

Be sure to use double density diskettes, and not the high density
diskettes common on the PC. A DD disk will hold 720kb, a HD will hold
1.44Mb.

A regular Atari ST can read DD disks formatted on a PC, but the drive
can't handle a HD disk.

>a BBS with software files from commercial software on it. I'm not
>seeing the difference here! It's like, well, I could then have the
>resource file of a commercial program on a BBS... :)

Not quite the same thing. A one-or-two-second sample, remixed several
hudnred times by the "author" of the mod file, hardly equates to a complete
package which hasn't even been reworked.

>Thanks for the friendly discussion. I see where the NFL 'owns' the
>scores to it's football games, and so folks can't repeat these
>scores right away. Hum, a mod file of a commercially sold CD would

A matter of degree, I think. Sampling one note of Boots Randolph's sax
artistry and remixing it in a MOD isn't even close to simply taping the
whole song and then selling or giving away the tape. I think that's what
we're talking about, innit?

You need a host adapter (as usual) and a MFM controller - Adaptec 5500 is a good choice. Toad may still have some, and Best Eelctronics almost certainly does. However, the price of an Adaptec controller to hang on your SCSI host adapter is likely to exceed the cost of a used SCSI drive. Certainly the speed will be lower (unless you get a Seagate 5.25-inch 85 meg SCSI drive, as I recall, those were a little slower than grass growing).

If it says "loading TOS," you are trying to load the OS from disk.
Disconnect the hard drive and poser up the computer with a blank disk in
the A: drive. If it comes up to the desktop, you have TOS-on-ROM (the
"normal" case).

Assuming this is so, you need to disable the TOS-on-disk load which appears
to be trying to happen from the hard drive. You should have a utilities
disk that came with the hard drive - if not, go to ftp.supra.com and get
their utilities and create a boot floppy. Then fire up the computer BEFORE
the hard drive (so it doesn't auto-boot), run the hard disk driver from
floppy, and find and disable the TOS loader on the ahrd drive.

Of course, if there's nothing on the HDD that you need (again, assuming you
have TOS-in-ROM), you could reformat and reinstall if all else fails.

John Perez (jperez@Hawaii.Edu) wrote:

: If I were Steinberg, I would lower the price so that people might
: actually be able to afford the software. I am a firm believer that piracy
: is largely due to overpriced software. People certainly wouldn't go to
: the record store and pay $100 or $500 for the latest Madonna CD, but
: plenty of people do pay $15-20. If Cubase was $100, Steinberg would
: probably sell 10x the volume, and many more people would be happily using
: their software and looking forward to shelling out some clams for the next
: upgrade or additional products. These people don't understand that most
: people cannot afford $300-600 for a program, but will gladly spend $500 on
: ten programs. Would you rather spend $70 on one program, or $100 on four?

I don't think Steinberg would sell 10x the volume if the price was $100.
Cubase (and all the sequencers) are pretty specialized applications that not
everyone needs. Add to that the small Atari market, it's going to be tough
selling Cubase at any price.

On the other platforms, this may help a bit, but I think 10x the volume is a
bit optimistic. I don't think people will buy it just for fun and not
everyone is a musician.

I do believe that lowering the price on more generalized software such as
word processors, games and utilities will increase sales though. These are
the types of software that more people would buy and thus, lowering the
price will increase the volume sold.

>Hi, I would like to know if it is possible to hook a VCR into a
>SC1224.

Yes.

> I mean except the atari slot, what else is available on this
>monitor?

In the conector you have the following signals:

```
O O O O
4 3 2 1

O O O O
8 7 6 5

O O O O
12 11 10 9

O
13
```

1 Audio
2 N.C.
3 N.C.
4 N.C
5 +15 volts
6 Green
7 Red
8 Ground
9 Horizontal Sync. (15.625 kHz)
10 Blue
11 N.C.
12 Vertical Sync. (50/60 Hz depending on model)
13 Ground

All you have to do is to make a cable adaptor rom the Atari one to SCART/EUROCONECTOR and plug the TV/VCR :-) So you can use a TV or VCR with full SCART conector to view or record images from an Atari ST, or use the SC1224 to view images from a VCR.

The input levels of the SC1224 are :

RGB: 1 volt peak to peak (analogic), impedance 57 ohms
Audio: 1 volt peak to peak, impedance 220 ohms

Sync: negative TTL, impedance 5 kilo-ohms

4346. Re: C compiler wanted (Freeware)

Newsgroup: comp.sys.atari.st
Date: 1996-09-10 00:00:00 UTC
From: Michael Clemmetsen <Michael.Clemmetsen@sunderland.ac.uk>
Message-ID: <32357A23.4ACF@sunderland.ac.uk>
Source record: 138160

There are two free C compilers for the ST/Falcon: GNU C and Sozobon C. Both are available in a number of
different versions - later versions of GNU C include a C++ compiler, later versions of Sozobon C (called
eXtended Sozobon) are ANSI C.

Both are based on unix C compilers and are therefore best used from the command line and need a specific
directory structure and environment variables to be set before they work correctly.

If you have a lot of memory and hard drive space GNU C may be for you. EXtended Sozobon uses less memory and
disk space (and can in theory be run from floppies) and (it is claimed) produces faster executables than GNU
C.

Both come with GEM libraries so you can write GUI applications (ST-Guide is written with Sozobon C), however
you will need to go elsewhere for info on all the various system calls. Both also have special libraries for
MiNT available for non-TOS system calls.

I would suggest that neither is easy to use for the first time C programmer - you definitely need a few good
books on C to get you going, preferably ones written from a unix rather than PC standpoint. This is why I've
been tinkering on and off with Sozobon C for two years and have only written 2 menial programs ;-).

You could also try Heat & Serve Sozobon which is an older K&R based package put together by Ian Lepore - this
is easier to set up and get going.

The newest Sozobon C is available from
ftp.fu-berlin.de
in the directory
/pub/atari/programming/sozobon

Heat & Serve Sozobon is available from
micros.hensa.ac.uk
in the directory
/micros/atari/tos/n/n089
There are some access restrictions to hensa if you outside the UK academic community, but I can't remeber what
they are.

GNU C is available from a variety of places including
ftp.cs.tu-berlin.de
in the directory
/pub/atari/Gnu

Hope this helps you get started,

Michael

>make my software compatible with all machines.

Yes but look at all the machines you do have, TT, Falcon and ST's,
and I have my one humble ATARI STe, you have more chance of making
fully compatable software than I, if you make something on the ST and
it works fautless on the falcon and TT then you are ahead of the game,
you ahve the tools in having various machines,

>I don't. Maybe I put it the wrong way. What I am saying is,
>whether I review it or not, that is still my opinion. But I would not write
>in a review of the software "This software is useless because it only works
>on the ST." I might write something more like "Unfortunately the software
>only works on the ST, it's a pity this is the case, but if you have an ST
>then it will still be useful to you."

Ok agreed you would not outright say its useless, I didnt really
presume you would <smile>, but I still hold my point, people do read
betweeen the lines, Sorry to go on, but I find it amazing that you
would even consider saying the following...

(1)"unfortunatly the software only works on a ST"

(2)"but if you have an ST then it will still be useful to you"

Take into consideration that it was..

Made on a ST.
By an ST user.
For ST users.
Made with ST software.

Then say out load quote number one!!!!

>I still wish people would make things compatible though. I guess in the case
>of these fast games it may be more difficult, I do not have much experience
>in that area. But in other areas there really is no excuse, IMHO.

Yes I agree, I already pointed out that such things as diskzine
shells that I currently make and update, they work on ALL TOS version,
And where speed is an advantage, it certainly is not a NEED in order
to make the program work,
But I was originally commenting on the game I will be releasing this
week, that at this moment will work on ALL ST machines, all ST TOS
versions, mega, 206,205 etc etc,
I do feel that it would be very unfair for someone with the attitude
that it should work on none ST machines to review the game,

We are having a sensible debate here so this is not meant to be an
insulting comment by any means <smile>, but I would certainly hope
that YOU never get to review HEARTLAND thank you very much,

Cheers.............!ynoT

Hi Simon,

I know of one such program, it's called S3-ST and version 2.0 was reviewed
in Atari World issue 9 page 86.

They were very impressed with it, it even has a program supplied with it
that is the ST version of the Psion's data program. That allows the viewing
of Psion database files, these can then be edited on the ST!

FloppyShop,Goodman,LAPD, will ahve a copy or a BBS near you?

Hope you find a copy....but at least you know what to look for.

Regards

Rob.

>
>The analogy is very loaded, it was supposed to be. But distorted ? no,
>I dont think so.

It is very distorted. You felt the need to add elements of the
'crime' that simply weren't there to make a point. This 'need'
makes you view appear VERY VERY VERY weak. If it were stronger
you wouldn't have to use such dishonest tactics.

>
>If I steal a car, I am depriving the owner of goods and money. If I
>steal a piece of software, I am depriving the publishers and author of
>money, time and effort. Both constitute theft.

You are still trapped in the car=software trap and cannot manage
to get out of it. You still cannot manage to state the situation
in a manner that does not add to it consequences to the damaged

that do not exist.

You deprive the publisher of income, that is all.

The time and effort are already quite gone. There is no way that
you could deprive them of those.

>
>> The poster was advocating that is would be perfectly ethical in this
>> situation to make an exact copy of the Triumph.
>
>Hmmm.
>
>I wonder if Triumphs lawyers would be very happy about somebody making
>an exact copy, that is Logos and all, of one of their bikes ?
>
>I think the copier could well end up in court, dont you ?

It really depends upon scope. An entity that actually has
to expend resources on it's 'moral crusades' will unlikely
do so unless it is worth their time and money.

Truimph would most likely not bother, assuming they noticed.

>
> And after all, they would probably be in court for putting the
>Triumph name on the bike, which is the intellectual property of
>Triumph.

Tort vs. Crime is a very important distinction.

[feeding frenzy deleted]

Your ideas are poorly stated and undermine your position. They
make you look foolish and dishonest. My position, whatever it
is, has no bearing on your poor arguements.

I have not yet even begun to argue, per se.

You never addressed the ethics of the situation within the proper
context. You ONLY addressed the legal consequences. If law and
ethics have anything to do with each other it is purely
coincidental.

I don't have my AHDI disks here to check, but I'm pretty sure that it's
always been freeware. Atari retained copyright, but permitted free
distribution - sine the software was useless without an Atari computer
(until fairly recently), that would make sense, I think.

Using the usual HTML mehtods works fine with Atari also. Place the files on the web site as .WAV files (sample rates around 8000 kHz max, the slower the sample rate, the smaller the file and the quicker it transfers, but the worse it sounds). CAB users on the STe and TT can use WavePly2; all Atari users can use LPS124 as "helper" apps. Just pull down the settings menu and install one of these as the external viewer program for WAV files. If using LPS124, you can also set environmental variable to limit playback speed and do other interesting things.

Both players should be readily available at the usual ftp sites.

Tell your ISP to turn off the VJ flag for your account; STiK doesn't work
with CSLIP (yet); you can log in and whatnot, but you can't resolve hosts
or receive data.

If you aren't running MiNT, then you need to be sure your Internet Service Provider offers /uncompressed/ SLIP (VJ flag == OFF). Then go to my bookmarks page (listed below) and download WWW131 - everything you need except a newsreader is in there. Two newsreaders are in beta test right now; in the meantime, you can read and post news at http://www.dejasnews.com using CAB.

4357. Re: Falcon, Ghostlink, HSMODA07, 8250 UART

Newsgroup: comp.sys.atari.st
Date: 1996-09-10 00:00:00 UTC
From: Spencer@mettav.demon.co.uk
Message-ID: <19063_Spencer@mettav.demon.co.uk>
Source record: 138171

Out of the ether, the following was mentioned by Aardvyrk@cris.com...:

A> With the same 286 I have successfully LapLinked in both directions
A> at 115k. Of course, the only reason that I claim I have an 8250 is
A> because MSD.EXE diagnostics tells me so, usually with a baud rate of
A> 49,798 (?) Also, another fine set of serial port utilities for the PC,
A> CTSSPU, told me that it thought I had a 16450 or something like that,
A> since [actual program output] "8250s have not been used for many
A> years."
Well I have used both Zenith 8088/286/386/486/Pentium machines and they only introduced 16450/550's with the 486's and above (indeed I have even used a number of Zenith 486's which had 8250 UART's).

The most I have got successfully from ghostlink on an 8250 UART is 19200. I have managed 57600 reliably on a 16450 based machine. However my current 486 (Zenith Z-Station 500) only manages 57600 and that has a 16550 UART plus 486DX2! If I go above ghostlink locks the machine up (I have used 115k on an exact same machine ok).

I think your problem is possibly down to the inefficient driving of the 8250 by ghostlink which seems to need a good cpu to do well on high speed transfers. Laplink is well known for its good comms drivers however no matter which cpu is in use.

Hi
If anyone can help me it would be greatly appreciated!!When I log on to the freenet where I'm not able to directly download files my file selector menu shows that I can send and receive text files----and send and receive binary files(which I can't on the freenet)
When I connect up to the AFM BBS through compuserve where I should be able to download binary files those headings in my file selecter window are off.On the AFM BBS I can get the download started But stalker won't start.I've tried Z modem auto,Ymodem-g,Ymodem batch,resaved the new config. each time and rebooted.It still wouldn't download.I also changed from VT100 to ANSI and nothing changed.HHHHEEEELLLLPPPP!!!!!!

This works, I did it and have already received $682.00 in the past week.
****
Hello! I've got some awesome news that I think you need to take two
minutes to read if you have ever thought "How could I make some
serious cash in a hurry???" , or been in serious debt, ready to do
almost anything to get the money needed to pay off those bill
collectors. So grab a snack, a warm cup of coffee, or a glass of your
favorite beverage, get comfortable and listen to this interesting,
exciting find!
Let me start by saying that I FINALLY FOUND IT! That's right!. I
found it! And I HATE GET RICH QUICK SCHEMES!! I hate those schemes
like multi-level marketing, mail-order schemes, envelope stuffing
scams, 900 number scams... the list goes on forever. I have tried
every darn get rich quick scheme out there over the past 12 years. I
somehow got on mailing lists for people looking to make money (more
like 'desperate stupid people who will try anything for money!').
Well, when I was a teenager, these claims to 'get me rich quick'
sounded irresistible! I would shell out $14.95 here, $29.95 there,
$24.95 here, and another $49.95 there. I had maxed out my new Circuit
City Card AND my Visa...I was desperate for money!! So, I gave them
all a chance but failed at every one of them! Maybe they worked for
some people, but not for me. Eventually, I just tossed that JUNK MAIL
in the trash when I got the mail. I recognized it right away. I can
smell a money scam from a mile away these days, SO I THOUGHT....
I thought I could sniff out a scam easily. WAS I WRONG!! ....I LOVE
THE INTERNET!!!

I was scanning thru a NEWSGROUP and saw an article stating to
GET CASH FAST!! I thought..."Here on the Internet?? Well, I'll just
have to see what schemes could possibly be on the internet." The
article described a way to MAIL A ONE DOLLAR BILL TO ONLY FIVE PEOPLE
AND MAKE $50, 0000 IN CASH WITHIN 4 WEEKS! Well, the more I thought
about it, the more I became very curious. Why? Because of the way it
worked AND BECAUSE IT WOULD ONLY COST ME FIVE DOLLARS (AND FIVE
STAMPS), THAT'S ALL I EVER PAY....EVER!!

Ok, so the $50,000 in cash was maybe a tough amount to reach, but
it was possible. I knew that I could at least get a return of $1,000
or so. So I did it!! As per the instructions in the article, I mailed
out ('snail mail'for you e-mail fanatics) a single dollar bill to each
of the five people on the list that was contained in the article. I
included a small note, with the dollar, that stated "Please Add Me To
Your List." I then removed the first position name of the five names

listed and moved everyone up one position, and I put my name in position five of the list. This is how the money starts rolling in! I then took this revised article now with my name on the list and REPOSTED IT ON AS MANY NEWSGROUPS AND LOCAL BULLETIN BOARD MESSAGE AREAS THAT I KNEW. I then waited to watch the money come in...prepared to maybe receive about $1000 to $1500 in cash or so.... But what a welcome surprise when those envelopes kept coming in!!! I knew what they were as soon as I saw the return addresses from people all over the world-Most from the U.S., but some from Canada, even some from Australia! I tell you, THAT WAS EXCITING!! So how much did I get in total return? $1000? $5000? Not even!!! I received a total of $23,343!!! I couldn't believe it!!

I now have a brand new black Acura Integra to speak for, due to this!! Now after almost 8 months, I am ready to do it again!!! So maybe it was possible to get $50,000 in cash, I don't know, but IT COMPLETELY DEPENDS ON YOU, THE INDIVIDUAL! You must follow through and repost this article everywhere you can think of! The more postings you achieve will determine how much cash will arrive in your very own mailbox!! It's just too easy to pass up!!!

Let's review the reasons why you should do this: The only cost factors are for the five stamps, the 5 envelopes and the 5 one dollar bills that you send out to the listed names by snail mail (US Postal Service Mail). Then just simply repost the article (WITH YOUR NAME ADDED) to all the newsgroups and local BBS's you can. Then sit back and, (ironically), enjoy walking (you can run if you like! :o) down your driveway to your mailbox and scoop up your rewards!! We all have five dollars to put into such an easy effortless investment with SPECTACULAR REALISTIC RETURNS OF $15,000 to $25,000 in about 3-5 weeks! So HOLD OFF ON THOSE LOTTERY NUMBERS FOR TODAY,EAT AT HOME TONIGHT INSTEAD OF TAKEOUT FROM McDONALDS AND INVEST FIVE DOLLARS IN THIS AMAZING MONEY MAKING SYSTEM NOW!!! YOU CAN'T LOSE!!

So how do you do it exactly, you ask? I have carefully provided the mostdetailed, yet straightforward instructions on how to easily get this underway and get your cash on its way. SO, ARE YOU READY TO MAKE SOME CASH!!!?? HERE WE GO!!!

*** THE LIST OF NAMES IS AT THE END OF THIS ARTICLE. ***

OK, Read this carefully. Get a printout of this information, if you like, so you can easily refer to it as often as needed.

INSTRUCTIONS:

1. Take a sheet of paper and write on it the following:
"Please add my name to your list". This creates a service out of this money making system and thus making it completely legal. You are not just randomly sending a dollar to someone, you are paying one dollar for a legitimate service. Make sure you include your name and address. I assure you that, again, this is completely legal! For a

neat little twist, also write what slot their name was in: "You were in slot 3", Just to add a little fun! This is all about having fun and making money at the same time!

2. Now fold this sheet of paper around a dollar bill ,(no checks or money orders), and put them into an envelope and send it on its way to the five people listed. The folding of the paper around the bill will insure its arrival to its recipient. THIS STEP IS IMPORTANT!!

3. Now listen carefully, here's where you get YOUR MONEY COMING TO YOUR MAILBOX. Look at the list of five people; remove the first name from position one and move everyone on the list up slot one on the list. Position 2 name will now move to the position 1 slot , position 3 will now become position 2, 4 will be be 3, 5 wil be 4. Now put your name, address, zipcode AND COUNTRY in position 5, the bottom position on the list.

4. Now upload this updated file to as many newsgroups and local bulletin boards' message areas & file section as possible. Give a catchy description of the file so it gets noticed!! Such as: "NEED FAST CASH?, HERE IT IS!" or "NEED CASH TO PAY OFF YOUR DEBTS??", etc. And the more uploads, the more money you will make, and of course, the more money the others on the list will make too. LET'S ALL TAKE CARE OF EACH OTHER BY BEING HONEST AND BY PUTTING FORTH 120 PERCENT INTO THIS PROFITABLE & AMAZING SYSTEM!!! You'll reap the benefits, believe me!!! Set a goal for the number of total uploads you'll post, such as 15-20 postings or more! Always have a goal in mind!!! If you can UUE encode the file when uploading, that will make it easier for the people to receive it and have it downloaded to their hard drive. That way they get a copy of the article right on their computer without hassles of viewing and then saving the article from the File menu. Don't alter the file type, leave it as an MS-DOS Text file. The best test is to be able to view this file using Microsoft's Notepad for Windows 3.x or WordPad for Windows '95. If the margins look right without making the screen slide left or right when at the ends of the sentences, you're in business!

5. If you need help uploading, simply ask the sysop of the BBS, or "POST" a message on a newsgroup asking how to post a file, tell them who your Internet provider is and PEOPLE WILL ALWAYS BE GLAD TO HELP. I would try to describe how to do it but there are simply too many internet software packages with slightly different yet relatively simple ways to post or upload a file. Just ask for help or look in the help section for 'posting'. I do know that for GNN, you simply select 'POST' then enter a catchy description under the subject box, choose 'ATTACH', selecting 'UUE' and NOT 'TXT', then choose 'Browse' to go look for the file. Find your text file CASH.TXT and click on it and choose 'OK'. Place a one line statement in the main body section of the message post screen. Something like "Download this to read how to get cash arriving in your mailbox with no paybacks!" or whatever. Just make sure it represents its true feasibility, NOT something

like..."Get one million dollars flooding in your mailbox in two days!"

You'll never get ANY responses!

6. And this is the step I like. JUST SIT BACK AND ENJOY LIFE BECAUSE CASH IS ON THE WAY!! Expect to see a little money start to trickle in around 2 weeks, but AT ABOUT WEEKS 3 & 4, THE MONEY STORM WILL HIT YOUR MAILBOX!! All you have to do is take it out of the mailbox and try not to scream too loud (outside anyway) when you realize YOU HIT THE BIG TIME AT LAST!!

7. So go PAY OFF YOUR BILLS AND DEBTS and then get that something special you always wanted or buy that special person in your life (or the one you want in your life) a gift they'll never forget. ENJOY LIFE!

8. Now when you get low on this money supply, simply re-activate this file again; Reposting it in the old places where you originally posted and possibly some new places you now know of. Don't ever lose this file, always keep a copy at your reach for when you ever need cash. THIS IS AN INCREDIBLE TOOL THAT YOU CAN ALWAYS RE-USE TIME AND TIME AGAIN WHEN CASH IS NEEDED!

9. (This step added by Charles Reiley). Hello, This is exciting, isn't it?! While I'm on the list, just add a note saying "Please include extra money tips" with your name & E-MAIL address, and I will (FOR FREE) send you some neat methods to increase the money you will receive with this plan. Why?... Why not? I'm not a selfish jerk...I like helping out others. E-mail just makes it a touch easier and cheaper, too! After I drop off the list, I can no longer offer you this advice, obviously, but maybe someone else who gets my tips will offer and simply replace my name on this step number 9. Good luck and give this plan your all, it will definitely pay off! Like Mike said, HAVE FUN WITH IT!!!

10. (This comment added by Mike Lorincz) Hell dude, this is great, just send the money and wait like 1 week, then all of a sudden, BOOOOOOM! Mail flood full of dollar bills. Hahahah its great

Just a quick message to say thanks to those Atarians who pointed me in the direction of Imagecopy 4 CD.

It's just an ammazing piece of software:-)

I like the Thumbnail option....just like on the mac or pc!

It's pretty fast too....

Now all I need is a Falcon and SVGA monitor to see it working at it's full potential.

Still I shall find using it a pleasure...Thanks for the pointer

I had the same problem with my Cubase dongle on my ST before I bought
a Falcon. I guess the difference is if I rebooted my machine (leaving
the machine off for 10 seconds or so) it would load Cubase with no
problem 99% of the time on the second try. Netherless, this is
unacceptable, I agree.

Have you called Cubase and asked for a dongle trade-in?

Have you ever had data loss due to the dongle?

> If I were Steinberg, I would lower the price so that people might

> he do with the data it produced?

1. His data isn't gone.. he just cannot load the program 30% of
the time. THERE IS NO DATA LOSS.

2. He can still load Cubase. It is inconvient, and wrong, and
it should be fixed.. but Cubase still will run 70% of the time.
If it doesn't run, he just has to reboot and try again (I know,
I've been there). I don't think you understand the problem.

> >doesn't let you run the program. I've NEVER had, nor heard of anyone
> >else having, data loss as a result of a dongle on Cubase. If I'm not
>
> Our friend from Hawaii has complained about this very thing.

No, he didn't, at least not that I've read. He only mentioned
Cubase failing to launch 30% of the time.

> Others on this group have stated otherwise.

Seriously? I haven't read that from anyone. Please post a
reference for me, I would appreciate it.

> I assumed nothing. My information comes from the dongle-dissidents
> on this group.

Again, I would love to see evidence from Cubase users about:

1. Loss of data due to the dongle
2. Whether or not Cubase looks for the dongle other then at
boot.

If you have evidence, I would love to see it. All I'm reading
is your comments. I've been reading this group for a couple of
years now, and have never read such things.. and it's possible
I've missed it.

Here's your chance.. prove me wrong. Enlighten me.

> >Again, you are basing your whole argument on your lack of information
> >about the product.

>
> ACtually, my comments are based upon the people who have complained
> about dongle problems in this group. Odd that I saw them and you
> did not.

Very odd, indeed. Please cite examples of data loss, or show that
Cubase looks for the dongle more than at startup.

> Furthermore, the physical deterioration issues present in the dongles
> exist even without that information.

Yes, they do. But I'm still looking for evidence of data loss.

> Will someone in the know actually post a definitive answer
> to deal with the disputed point?

That would be nice.. you certainly haven't.

> I believe he has before. Then again, it could have been that
> other dongle-dissident.

Who is that? Please post a name (or psyeudonym, of course). I would
like to see him/her post.

> Furthermore, my language was quite appropriate to my apparent
> state of knowledge.

That's true.

> Finally, you didn't address my entire arguement.

4366. Auto run Teradesk

Newsgroup: comp.sys.atari.st
Date: 1996-09-10 00:00:00 UTC
From: Lanuel Staten <nine99@primenet.com>
Message-ID: <514jqp$5ps@nnrp1.news.primenet.com>
Source record: 138180

I tried the "install application" proceedure as well as putting teradesk (with the accompanying resource and config files) in the auto folder. No luck. Just goes to the regular desktop. All other accessories and auto folder programs run.

I'm running TOS 1.4 on an ST with Warp 9. Help?

4368. NED PLAYER v2.0

Newsgroup: comp.sys.atari.st
Date: 1996-09-10 00:00:00 UTC
From: Sumbera Petr <xsumbe00@dcse.fee.vutbr.cz>
Message-ID: <Pine.UW2.3.93.960910230920.9159A-100000@sts.dcse.fee.vutbr.cz>
Source record: 138182

I have just done new version of NED PLAYER v2.0.

You can now get NPLAY20.LZH from:

ftp.funet.fi
ftp.cnam.fr

What it is? Here is small info.

NED PLAYER 2.0
Simple sample player for ATARI STE/TT/FALCON. Now you can
change smooth frequency from 6 to 25 kHz in mono (SW MODE).
And it automatically recognize some sound formats
(SAM,DVS,SND,AU,WAV).

-features:----------

- It runs as ACC or PRG
- You can use Drag & Drop
- unsigned -> signed -> unsigned (CHANGE FORMAT)
- MultiTOS compatible
- Iconize (MultiTOS + new AES)
- SW MODE (smooth frequency change from 6 to 25 kHz) *NEW*
- Automatic file format recognize *NEW*

-file formats:----------

It recognize and play this sound formats:

- SAM (ATARI 'STOS Maestro')
- DVSM (ATARI Falcon 'WinRec')
- SND, AU (Sun, Mac, NeXT)
- WAV (PC)

Note:

1) It can play unpacked and 8-bit files only.
2) If you press LOAD with CONTROL, it will load file
as normal binary data.

Petr

Yes, and one of the things on that list are PYRAMID SCAMS. What you describe is EXACTLY a get-rich quick scheme. It's been tried hundreds of times, and it is VERY MUCH illegal. Obviously, if everyone puts five dollars into the pot, everyone can't take $1000 out. It's amazing that anyone takes this stuff seriously.

If (as you say in your post) you really "love the internet", then quit cluttering up the newsgroups with this garbage! If you wan't to start your own illegal.mail.scams newsgroup, go ahead, but don't waste our time.

And at least have the balls to SIGN YOUR MESSAGE so that you can be held accountable for your unethical acts.

Thanks to all who responded (even those who told me to look to the left of Z, above ALT; there is no key there in North America). K Ellison pointed me toward KEYEDIT.PRG, which does solve the problem. Now I can put whatever characters wherever I want them. I still can't run Calamus (N American release) on that machine, but I have two others for that anyway, and the STf 2.5 Meg (now TOS 1.4) will probably be my mobile MIDI and/or home use machine.

Got rid of everything and FSERIAL worked fine. Ran everything (Magic, NVDI, etc. except HSMODEM) and it didn't work. Turned of the serial mouse function in WM (Wrap Mouse. I use the standard mouse port anyhow) and it helped. Loaded FAST_SER.PRG before Wrap Mouse and got Stalker to work fine, _if_ I added another 2 seconds delay before it responds to the network.

> x> With FSERIAL loaded, Stalker no longer works, even if I set it exactly

Stalker works fine with HSMODEM6.

Thanks for the feedback.

I did find it through Hallvard's site. A very slick application. I
created a
DXF file in Strada 3D on the Mac (sorry guys), started MagiC Mac and
converted
the file type to Atari. Rosetta loaded the file and I was able to save
to the
3D2 format :). Now I have something to play with using Chronos and
Phoenix :)

>Is there any software available for linking a Psion 3a to the atari TT
>via serial cable? If so, will it work with MagiC and high resolution
>displays.

S3-ST (I'm using version 2) works very nicely with an ST and an S3. It
says it supports the 3a and I don't see why it wouldn't work on a TT.
I got it from Hensa, I think. Early versions didn't like my STE, I
think 1.81 was OK, but 2 is much improved. Hi-res is OK, not sure
about MagiC.

There was also French program called Trafic or something similar, but
I never bothered to investigate it as S3-ST worked so well.

Way back in 1986 I saw an ad in a Macintosh magazine for a hack
that allowed using the "large" 12" Atari mono monitor with the Mac. I've
never seen one in action, but I know that it's been done!

JEDI wrote this to Claes Holmerup about Typical Atari users...:
>> TDR> The only people making much sense in this newsgroup are
>> the TDR> ones who are being flamed heavily.
>>
>> Are they making sense?
J>
J> Quite a bit more than you do. At least there is a method to
J> my madness.

Ok - at least you admit you're mad ;)

>> By defending pirating, they make people realize what kind of
>> persons they are.
J>
J> Even if I am the most vile scum imaginable, THAT does not
J> automatically discount my ideas.

Certainly not - noone is altogether bad after all.

J> Any good idea, without sufficient justification, deteriorates
J> into a bad idea and becomes worse than even a bad idea that has
J> better justification.

For normally thinking people, the good idea is still better than the bad idea,
because most people have some amount of common sense.

J> You, on the other hand can only make logically baseless
J> accusations and DISCOURAGE more ethical behaivor.

The only way to get rid of software piracy (well that's a laugh, since it'll
probably never happen...), is to tell people that it's wrong.
The honest ones start buying the software they use, but the dishonest will
never buy the software anyway. They just live like parasites on the ones that
do pay for things they use.

>> Piracy is always theft and always will be.
J>
J> Fortunately your legal authority is absolute zero.

I don't care what your opinion about piracy is, but according to copyright
laws, it IS illegal (sadly not in all countries, though).

>> Get real - if people want to
>> use a certain platform, let them. They obviously like using the
>> computer they use, or they would have changed to another
>> platform already. Besides - what's YOUR expertise on the
>> matter? My own expertise is by using and professionally

>> repairing Atari, Amiga and PC for about 9 years. I've always
>> been able to choose which computer I want and I've always
>> chosen Atari, since it's always been best for what I've wanted -
>> and still is!
J>
J> ...and what happens when the supply of custom components dry
J> up?

That will indeed be a big problem for the ST's and STe's in a few years, but not for the moment. There are still people using the oldest ST's (from -85 if I remember correctly). Tell me which PC's from -85 that are really usable today... Or if you can find all spare parts for those.
For the computers that are manufactured today, there are no problems getting spare parts - whether it's a Falcon or a PC.

>> There are still very many Atari-users that don't have a
>> harddisk, since it's not vital for all uses (like it is for
>> PC's) and I don't think they mind that much...
J>
J> The Kung' don't miss amenities such a running water and such
J> either...

My point here is that if someone plays games that can be held on one disk or if he uses the ST for writing letters or other simple tasks, he simply doesn't need a harddisk.
I couldn't live without a harddisk, that's for sure - but there are many that really wouldn't have any use for it.

J> For general use, even despite PC system/application software
J> bloat, one can build a quite usable PC for quite a bit less
J> than one can buy a Falcon.

Not if you want to go into professional audio recording, but otherwise I may agree when it comes to hardware. But you'll have to pay very much more for the software on the PC - you have to take that into concideration too (that is - if you don't get pirate copies of everything).

J> Then, there is that daunting task of
J> finding a Falcon (mail order & overseas mail order don't count)
J> or any hardware or software for it.

Why wouldn't mail order count?
If you want to use a certain product, you buy it wherever it's available - you don't wait until a shop around the corner has the product in the store, do you?
If you know where to look, it's no trouble at all finding soft-and hardware for the Falcon.

>> TDR> Things like enhanced gdos and xcontrol were
>> TDR> met with such excitement that I was blown away. I was
>> like TDR> "what the hell is all the damned excitement over?".
>>
>> Since you didn't understand the excitement, you obviously lack
>> any experience with Atari computers...

J>
J> Some Atari advocate you are: is that really the best retort
J> you could come up with. You give no one any reason not to
J> believe that: YOU obviously lack any experience with Atari
J> computers...

I don't care to go into details for some ignorant fool - like TDR -who does
nothing else than complain.

>> Remember that this was at a time that PC's hardly knew there
>> were more than 16 colors, so don't compare them with the
>> graphics cards of today.
J>
J> In 1988 PC's could be easily equipped to do 256 colors. The
J> STe came along quite a bit longer than that.

In 1988 noone asked about how many colors could be shown on the PC they bought
(only if it was Hercules, CGA or VGA), but graphics cards with more than 16
colors were available - but at a very high price level. Remember that the
standard VGA setting in Windows still is 16 colors...

J> Furthermore, ragging on the Amiga does not do squat for your
J> point. "Gee Atari sucks... so does Amiga..."

Simply compairing with the competition at the time, since that's what the jerk
complained about. Actually he made the mistake of compairing old ST's with
modern PC's, which isn't relevant.

J> Furthermore, the Amiga was not limited to the 500+. There was
J> quite a bit more system evolution on their side. Attempting to
J> make such comparisons only makes the Atari look foolish.

If you compare two products that came about the same time, the Amiga3000 and
the AtariTT, there's no doubt that the specs of the TT was better.

>> What other "dinosaur" manages 16 audio tracks with the best
>> sequencer program available?
>> Mind you that "Atari computers" aren't only the old ST's, but
>> also the new clones, like C-lab Falcon, Medusa, Hades and some
>> more that are about to be released from Wizztronics.
J>
J> <VAPOR> ATARI </VAPOR>
J>

What's vapor about the Falcon, Hades and Medusa?
They are products that are available this instant.
Stop talking about things you are so obviously ignorant about or you'll look as
foolish as the fool who wrote the original mail.
/Who is the most foolish - the fool or the fool who follows him?/

>> Obviously you haven't run windows enough to realize the
>> advantages of TOS. I know that it's very much a matter of taste,
>> but I like TOS much better.

J>
J> Too bad you couldn't back up your empty rhetoric with at least
J> as much as TDR did...

What is there to back up? A matter of taste can't be discussed.

>> I've decided to stay with the Atari line of computers as long
>> as they do the job that I need them for. I must say that your
>> vocabulary isn't too good - you
J>
J> A diction criticism: a sure sign of an empty response.

Who's doing the generalizations here?
You mark words in everyone's letters, but it's always easier to see other's
faults than your own, isn't it?

>> use very foul language throughout the letter, so I guess it's
>> you who should grow up...
J>
J>
J> He's moved on, you idiot.

Yes, but I assume he'll get the mail anyway - if I were him, I guess I'd like
to see what waves I made.
Weren't you the one who in previous letters said you never called anyone names?
Well - the count is on...
This newsgroup is NOT intended as an advocacy group and I find it very annoying
to get all the idiotic mailing from you. I suggest that you discontinue this
"quest" of yours and crawl back into the hole someone dug you up from and let
this group continue what it was doing before you came around.

J> He isn't even around to see your vacuous response.

The only vacuum I can find here is located between your ears.

: : If I were Steinberg, I would lower the price so that people might
: : actually be able to afford the software. I am a firm believer that piracy
...
: : plenty of people do pay $15-20. If Cubase was $100, Steinberg would
: : probably sell 10x the volume, and many more people would be happily using

: I don't think Steinberg would sell 10x the volume if the price was $100.
: Cubase (and all the sequencers) are pretty specialized applications that not
: everyone needs. Add to that the small Atari market, it's going to be tough
: selling Cubase at any price.

I personally know of at least 10 Atari users that would purchase Cubase if it was $100. It is difficult for people to justify paying 2-3 times as much for a program than they paid for their computers. The Atari market may be small, and not all Atari users are musicians - I would agree with that; but what about the Atari users that are musicians but haven't been able to purchase a good sequencer because they are all priced for professionals? A market is what you make it, and pricing software in the $500 range certainly guarantees a small market.

: On the other platforms, this may help a bit, but I think 10x the volume is a
: bit optimistic. I don't think people will buy it just for fun and not
: everyone is a musician.

As I said, there are a lot of people out there that have Atari Computers and synths, but haven't ever been able to take the $500 plunge. Both of my brothers, two of my roommates, several associates of mine, and even a few people that would run out and buy Atari computers if they could get a decent sequencer for $100.

Music software is a peculiar thing, it is intended for professional use and priced accordingly, but this leaves out the aspiring musicians and composers, the hobbyists, and the students of music. Such individuls cannot afford the excessive prices that are asked for these programs. I firmly believe that the market would change dramatically if one of the high-end sequencers suddenly became affordable to the masses.

I've uploaded Fserial (along with the CPX module) at:

ftp://ftp.sn.no/user/hallvart/atari/fserial.zip

(I *think* I called the file "fserial.zip"- if not, it's something
similar).
I forgot the file-size as well.
Sorry about the lack of information, but I uploaded it a few days ago and
haven't yet entered the file-information in the "readme" file since I have
yet to find out what it's really all about.
(I just found the file on my harddisk and decided to help out- that's why I
uploaded it).
Oh, the docs are all in German, unfortunately.

4389. Ann: New FTP search- Atari FTP web links WWW page

Newsgroup: comp.sys.atari.st
Date: 1996-09-10 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <3234b6fa133dea4@sn.no>
Source record: 138237

I just want to take this opportunity to announce my web pages since I
haven't really done that before.
I've got a pretty big Atari ST section with sub-pages for:

-FTP download links (the same links as on my FTP site list) along with:
3 FTP-search engines, 2 of them set up for "Atari" files.

-Local FTP area downloads of various must-have/beginners utilities and
programs.

The main Atari page contains a vast amount of links, and new ones are added
all the time.
If you want to have a look at these pages, point your browser to:

http://home.sn.no/~hallvart/pages/atari.html

*All my pages are "Lynx optimised", so unlike many other pages they will
work with other browsers than Nutscrape- especially Lynx; the text based
browser- oh, all pages have been designed entirely on an STe!
Also the graphics.

Of you want to visit the rest of my pages you have the chance to go
back/forth from almost any other page, but if you want to go directly to
the opening page, go to:

http://home.sn.no/~hallvart/

It contains a huge amount of links organized by subject, one of these is
ofcourse Atari ST, as one of the above mentioned links guides you to.
I'd be happy for any feedback. You may also want to sign my guestbook...

>Still after them Hallvard? Attaboy!

Nah, not really as I've got ICD's "Link II" connected to a Quantum
Lightning 540s drive now, but I know someone else with an STe but no
harddisk, and since a host adaptor/case/power supply adds to the price
quite a bit (thereby making it pretty expensive) I was thinking that an
internal IDE solution would be competitive to harddisk solutions for PCs
and Macs....

From: "Rob S. Rice" <rsrice1@ix.netcom.com>
Message-ID: <512qaq$mam@dfw-ixnews3.ix.netcom.com>
Source record: 138241

AAAAAARRRGH!

All right--it's like this. I started with Neo, worked my way through the DEGAS'es, and ended up with Deluxe Paint ST, better than
which I have not yet found on any platform. Damn it, anyway, though, I had to go to a PC.

Naaooow... HUNDREDS of files in that DELUXE PAINT ST compressed ATARI, notnotnotnot AMIGA IFF format. Those are compressed with
'Byte Run' compression, sayeth the manual, THESE are compressed with VERT WORD and nearly as small as TNY files--and that's why I have so
many of them.

And NOTHING, NOTHING but Deluxe Paint ST, the cranky Deluxe Paint viewer, and a program called GLEE by one David R. Mace could ever
view them. And the mouse disappears when I try to run THEM with Gemulator/MagiC! Even GEMVIEW thinks that they're AMIGA IFF and cannot,
cannot, read them. The same is true for LESMICH and even the PBM utilities.

I need a convertor. Oh, gad, do I need a convertor.

Naaaoow... We're working on one. I get it, I post it, and that's good news for EVERYBODY. BUT THERE AIN'T no information
availible on VERT WORD compression. That nifty FAQ about Atari Graphics formats? It's the AMIGA version, folks.

HELP! HELPHELPHELP! Anybody know ANYTHING about this format? Stephen White, are you OUT there? Has anybody written a graphics
convertor for the format? GIF, PCX, I'm not fussy--I JUST NEED Heeeeeeeellllllllp!

We now return you to your regularly scheduled programming.

Hi All,

I don't know if any of you remember the Patch program for NVDI 3.0x that I sent to Hallvard to put on his FTP site, but many people were asking what exactly it patched and what the improvements were. At the time I said I'd lost the information I'd written down when I upgraded my own versions, but I've just started an evening college course tonight and when I grabbed my notepad I found all the details hiding in there - a lucky break...

I don't pretend to understand any of this, but this is what was reported when I upgraded each of my versions.

NVDI v3.01

1, 2, 3, 4, 5, 6

NVDI v3.01 Matgraph

1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11

NVDI v3.02

1, 4, 5, 6, 12, 13, 14, 15, 16, 17, 18

NVDI v3.02 Matgraph

1, 4, 5, 6, 16, 17, 18

Reference:

1. v_bez_fill() corrected
2. BCID-Encoding of 13-10-94 will be replaced
3. BICS-Encoding of 13-10-94 will be replaced
4. Postscript-Encoding of 13-10-94 will be replaced
5. Unicode-Encoding of 13-10-94 will be replaced
6. Mac-Encoding of 13-10-94 will be replaced
7. Underlining corrected a.
8. Underlining corrected b.
9. Correction of LineA-Dispatchers
10. v_clswk() corrected
11. Mxalloc() call corrected
12. sp_build_font_info() b.
13. FIF 1.05a.
14. FIF 1.05b
15. Textblt ROM-Correction
16. Correction of ATextblt
17. BCID-Encoding of 17-02-95 will be replaced
18. BICS-Encoding of 17-02-95 will be replaced

HTH

I don't know what effect it had on NVDI ET4000 because I didn't use it then
(although I do now), but I expect it's very similar.

FROM: SSweet@mettav.demon.co.uk
SUBJ: TTM194 monitor for MSTE

Whilst under caution Spencer said to Officer Steve :~)

SS>> Boy do i pity you for making that sacrifice. 8~)

SD> Terrible isn't it! ;-)

I find it hard to contain myself sometimes. 8~))

SD> Anyway the TT with its Matrix TC1208e graphics card looks just great
SD> on it.

No Shit!. 8~))

SD> So hows your new graphics card?

Dusty by now i would have thought, its still at harrys. 8~))

SD> What monitor you using?

Thats the reason its still with H., i really need a bigger PSU on thi machine
and i dont have a monitor anyway yet, CPC's are ad'g some 15" boxes for £159.
BTW, Mark Dyas mentioned that he's found that these 30 to 72 pin simm
convertors will work with a FRAK board, so i'm waiting for a friendly cheap
RAM-raider to approach me and i can try some really silly numbers.

I suppose then that i could only use this device in the first slot, what do
you think.

Ive heard that the mega will fit in a full size PC tower, i may look into
that, and get the whole lot in one box Yet.

The point I was making was that I do not have many machines, yet I can still
make my software compatible with all machines.

>>If I ever review software, my opinion is that it is fairly hopeless if it
>>is not written "properly" and compatible with all machines, unless there is

[...]
> If you review software, why say its hopeless because it doesent work
>on a none ST, when it was made on a ST by an ST user who only has
>access to an ST, This is what I do not understand?

I don't. Maybe I put it the wrong way. What I am saying is,
whether I review it or not, that is still my opinion. But I would not write
in a review of the software "This software is useless because it only works
on the ST." I might write something more like "Unfortunately the software
only works on the ST, it's a pity this is the case, but if you have an ST
then it will still be useful to you."

I still wish people would make things compatible though. I guess in the case
of these fast games it may be more difficult, I do not have much experience
in that area. But in other areas there really is no excuse, IMHO.

I have a T-36 installed in an older MegaST2. It has an X-tra ram
card with 2 1mb simms (total of 4mb). I also have a Compatibility
Plus card with TOS 2.06 (Wizztronics) installed with a switch to go
back to 1.02 (ohhh nooooo). I have the cache/clock and TOS switchable.
You must run the T-36 with the Blitter off. Other wise..... Just like
the Falcon with an FX. I had to do the reset line mod that was
documented in the manual for the SST board (remember those?). I also
replaced two memory latches on the motherboard.
The machine is rock solid with no incompatibilites so far. It has been
installed for about a year. It runs Calamus, Works, Pagestream, Papyrus,
Imagecopy, Chronos, Phoenix, Rosetta, NVDI and MagiC without problems.
In some cases, its gives a stock Falcon a run for it's money.
It was purchased from Toad.

Hi there!

After a few years of silly obstinance, I've finally upgraded to
TOS 1.4. With this change comes the opportunity to run a few new
programs, including the STiK/CAB package. As a consequence, I'm battling
some of the same problems many of you dealt with months ago.

Here's the short version:

I connect, using STiK, and get an IP address (I hope it's mine!).
But whenever I try to use any of the accessory programs (CAB, TELNET, IRC)
I receive a "Resolving..." message and usually a timeout error.

So then, that's basically it, isn't it?!

Oh yeah--I'm driving a MEGA4 with a quicktel 14.4 modem.

Anxiously awaiting the fruit
of your mighty Atari brains,

Idiot!

Agree in all points, but
if I change to monochrome my falc is very fast too.
(I used to have a STE with T28 and this one is fast too, but I
can imagine your T36)

Best regards

However you try to dress it up and make it sound OK, the fact remains that copying software that you have not bought and therefore have no right or permission to do so is theft, plain and simple.

This is why people are prosecuted for doing it.

The analogy is very loaded, it was supposed to be. But distorted ? no, I dont think so.

If I steal a car, I am depriving the owner of goods and money. If I steal a piece of software, I am depriving the publishers and author of money, time and effort. Both constitute theft.

> The poster was advocating that is would be perfectly ethical in this
> situation to make an exact copy of the Triumph.

Hmmm.

I wonder if Triumphs lawyers would be very happy about somebody making an exact copy, that is Logos and all, of one of their bikes ?

I think the copier could well end up in court, dont you ?

And after all, they would probably be in court for putting the Triumph name on the bike, which is the intellectual property of Triumph.

I'm afraid it's your arguments, trying to justify pirating, that don't quite hold water.

Hi,

I have for sale in Holland an Atari TT030.

Includes:
- 8 Mb internal memory (4 Mb ST-RAM / 4 Mb TT-RAM).
- 48 MB Seagate.
- 212 MB Maxtor.
- TTM194 19" monitor (1280 x 960 x 2).
- SLM804 laserprinter (just installed new drum and toner).
- Spectre GCR Apple Macintosh emulator.
- Lighthouse tower case with 150 Watt PC power supply.
- Original case and powersupply available and usable without soldering !
- DD drive.
- Also have a HD drive available but needs Ajax controller.
- 8 x 1 Mb simms for TT-RAM upgrade (needs another TT-RAM board).
- Lots of dutch Atari related magazines and books.
- About 175 diskettes with Atari software.

All in one sale only !
Asking fl. 1700,-

4408. Atair Works and NVDI 4.11

Newsgroup: comp.sys.atari.st
Date: 1996-09-10 00:00:00 UTC
From: fl@zap.io.org
Message-ID: <513oqa$b6o@zap.io.org>
Source record: 138256

In the thread regarding making an IMG file from Works for printout under NVDI, many points have been raised (some by me).

I have now come to realize that the problems I have experienced with formatting the text on the page for printout FROM AtariWorks, THROUGH NVDI 4.11, TO an HP LaserJet 5L printer -- originate in Works. Seems as though the original coding made use of some bugs in TOS, which NVDI either bypasses or ignores.

I have heard some rumour that some people have come up with patches to correct the problems in Works -- is this true?

The kind of problems I am experiencing are mostly to do with the margins: a Left margin of 1 inch in Works gets printed out (through the NVDI LaserJet 4 printer driver) at about 1.25 inches, and a top margin of 1 inch comes out as roughly 1.17 inches. The Right margin is similarly shifted to the right by a quarter inch, but oddly leaving the bottom margin at 1.00 inches prints out just fine.

Furthermore, when switching to landscape mode in Works, the first printed line is all overstruck (letters on top of each other in a mess), but when I leave Works in Portrait mode, and switch NVDI to Landscape through the DRIVERS.CPX in the XCONTROL panel, then it works fine -- although it rotates the text in the opposite direction that what Works wants to do (NVDI: 90 degrees anticlockwise; WORKS: 90 degrees clockwise).

Overall, I feel that there are just to many kludgy workarounds and it would be nice to be able to have program, print utility and printer all cooperating in creating the same output.

Any Works fixes out there?

Is there such a thing as a fileselector that supports long filenames, runs fine under AES 4.1 with memory protection, and isn't Freedom? I tried BoxKite 1.61, and it looks really nice, but crashes really nastily with memory violations even when I set memory protection to super. I have an irrational dislike of Freedom; too many options, I think, and I don't really have a need for non-modularity in a fileselector.

That's correct and that's the reason why you can find AHDI on many ftp servers.

Now put in an FX card! Scatter-ZOOM! Easily twice as fast as a T-25/T-28, with more colors!

click on teradesk.prg /i hope it's the name of the main program, but it
can be also desktop.prg/, then go to 'extras' /sorry, i've got geramn tos
:)/, choose 'install application' and choose 'auto'. click 'ok', then save
desktop.inf and restart...

i hope this helps

I would like to know the current state of Atari emulation on PC's. I know there is MagicPC (German only?) and Gemulator (software now?). I am thinking of upgrading to a TT, but I want to know my options for the PC as I do some editing in Workperfect for someone else. Thanks...

4425. GEMBench/Ghostlink Questions

Newsgroup: comp.sys.atari.st
Date: 1996-09-11 00:00:00 UTC
From: Dan Phillips <xiting@worldnet.att.net>
Message-ID: <3236D4C8.27DD@worldnet.att.net>
Source record: 138117

I just downloaded GEMBench 4.03 and Ghostlink 1.02 Beta and had a couple of questions:

1. On my Falcon, why do I get 80% display and 98% CPU results when I have a system stripped of all but Blow Up FX (no video enhancement) at 36 MHz? I would expect at least 150% overall, not 95%. At 36 MHz with NVDI 3.01 and Magic 4, I get 346% display and 148% CPU (the CPU value should be essentially the same regardless of software enhancements, shouldn't it?). These programs can not enhance the CPU, only display, I believe. And Magic certainly can't make "ROM" access that much quicker just by putting it in memory.

2. Is 1.02 Beta the latest version of Ghostlink? Is there a way to get 153,600 bps out of the high speed PC serial chip? Also at 115 kbps transfer seems rather slow, on the order of 1 k per second. I get that in ftp on a 14.4 modem! Is this normal? It seems much faster to use a floppy. Is it possible to make a SCC to serial/ null modem cable to allow use of the LAN port? I believe Ghostlink supports the LAN as Standard AUX. Is this true?

Thanks for any help,

Dan

>or receive data.

Also make sure that the DNS they gave you is correct - many will give you
the gateway server rather than the Domain Name Server when you ask for
DNS. If they give you a secondary one, put that one in as your primary -
at least on TIAC in Boston, it seems to be far faster using the secondary
one.

Happy figuring out! :')

Hi,

I need very very quick help for an Ethernet card called RIBEL C90.

There is on it Jumpers :

J1 to J6 next to the BNC connector
J11 alone
J8 to J10 next to the VME port
J17 to J23 next to the memory

I want to make it running on TT030 ...

For the moment I have the driver for Ribel + !?
It always said that it don't find the card ...

So have you got a driver for it ?
Could you give me more informations about the jumpers because I have
no documentation of it !!

Please reply by Email ... !!

Thanks per advance for your help !!

With Best regards,
Herve

i've had my ICD AdSpeed STe for several years now and am completely satisfied with it! Only 2 things offer any annoyance at all! One is the fact that Atari in their infinite wisdom assigned, assigned the ID that ICD had been using for years to designated the Adspeed to the Falcon's IDE Hard Drive, so TOS 2.06 waits for the AdSpeed to time out before continuing with the boot process! Short but annoying, and not ICD's fault! The other thing is that Photochrome now displays a smeared mess on the screen, even in 8Mhz mode! Seems the timing is so critical that the smallest change blows it up! Speed of light still works though, even in 16Mhz mode! That is the sum total of what could be considered problems! Go for it!

Atari Falcon 030

- 4 megs of ram and an 85 meg internal HD.
- SVGA 14inch low radiation monitor
- Includes all original box, packaging, mouse and cables.
- Games
- DTP software
- excellent music machine, but then you know that
- etc.

No frilly bits, but in excellent condition.

300 pounds for quick sale in Cambridge or Warwick (UK).
Else buyer pays postage.

Email replies to jay@dcs.warwick.ac.uk.

Thanks,
Jay

Get more memory - that will fix it!

For accented characters, there is an .ACC called INSCHAR which will do the trick! If you had TOS2.06 you could use ALT-number pad to enter ASCII codes directly.

I think you have two options, Paula.

#1. purchase a complete package from TOAD - it's now only $39.95 and comes complete with extra fonts etc.

#2 purchase a copy of MASTERING PAAGESTREAM from TOAD which is a "hypertext accessory" which includes all the help and more that you would find in the manual!

I use CAF.. but you don't have to waste a MIDI channel if you piggyback
on your DRUM channel. I just use one of my drum sounds on MIDI channel
10 (which I'm using anyway) as my metronome, and it works great.

> Other hardware of note: I've got a Jamin/out 8/8 hooked up to the DSP,
> and the 44.1 kHz clock behind it.

Hey, about that Jam-In 8.. does Cubase support it via the ADAT interface
option, or do you have to use SoundPool's Audio Tracker to record?

What do you think of the sound? (I have a Jam-8 out, and I love it,
except for the obnoxious noise it makes when booting up or changing
hardware settings or sample rates.. I believe it's because of my old
FDI, though).

Thanks for the info..

>Clauss, but he don't know either, what could be the bug.

Hello

I'm still using NVDI 2.5 ET4000 and as I've 4+16 RAM on board is that
not the troublemaker either.
I'm sure the pictures I've uploaded are good because I can see then
when I use Chimera.
As I said before viewing some pages with graphics on goes fine until
CAB tries to convert the pictures. At that point I get a "runtime
error" and the only thing I can do at that moment is stopping the
program and restart again (under multitasking) and view the
troublemaker without the graphics.
I think it's a combination of a CAB-bug/dismiss and an abnormality on
the side of the provider where the page is located.

This message from williamssg@cf.ac.uk to All came in on a wing and a prayer...

w> Is there any software available for linking a Psion 3a to the atari
w> TT via serial cable? If so, will it work with MagiC and high
w> resolution displays.
I use S3-ST200 to link my Psion 3A to an STFM, it seems to run fine under ST High and with OverScan on so should work under TT resolutions as well. It's a two window drag'n'drop interface and works very well. I expect that the best place to look for it would be one of the Psion archives, you might need to contact the author to get the latest version (it's PD BTW)

Regards, Derryck

This message from nine99@primenet.com to All came in on a wing and a prayer...

Hi Lanuel!

n> I tried the "install application" proceedure as well as putting
n> teradesk (with the accompanying resource and config files) in the auto
n> folder. No luck. Just goes to the regular desktop. All other
n> accessories and auto folder programs run.
Teradesk won't run from the auto folder, you have to select the program file
and go to the "install application" menu entry, click on "auto", click on
"install" and then save the desktop. Next time you boot up the ST it should
automatically run Teradesk. If that still fails then check that you can run
Teradesk as a normal program.

HTH.

This message from pmarton@bgnet.bgsu.edu to All came in on a wing and a prayer...

p> Now, I'm taking some computer art classes here at Bowling Green State
p> University and we're working on... STs. Boy, was *I* surprised to back
p> in TOS after years of Mac/Windows/X.
p>
p> Problem: They're really slow, and I'm trying to speed them up.
Hardware, possibly a second-hand 16MHz accelerator, the AdSpeed one seems best, software, NVDI will speed up the screen display (minimum memory would probably be 1Meg BTW).

p> LCD/shutter glasses!), and running them off floppies (and then later
p> running the animations) is dog slow. We have an old ST (Supra?) HD
p> that connects and powers up, but after "Loading TOS" I just get 2
p> bombs. So... is there any software out there I can use to try and make
Loading TOS? You didn't say which model ST it is, but this sounds like the ST is trying to load a TOS image off the hard disk? If it's other than the very early models TOS is already present in ROM, which could explain the bombs..

If that's so then you will have to disable the hard drive from booting and look in the Auto folder to disable as required.

p> this disk setup work? I don't know anything about ST disk hardware
p> after the 520, but I'm guessing it's a SCSI drive by the number wheel
p> on the bottom.
That sounds right.

p> I haven't started working on the Falcon yet, but any pointers would
p> be appreciated.

If you mean the serial port which is what you use for modems, then it's dead easy. Just get a null modem cable between the two and use any comms program. You'll have to have the same settings and speed for both sides.

The Stalker menu selections are availible no matter what on your
program. It's just that you won't be able to use those options on
the freenet like you can on any other BBS.

> When I connect up to the AFM BBS through compuserve where I should be
> able to download binary files those headings in my file selecter window
> are off.On the AFM BBS I can get the download started But stalker won't

If you happen to have a script running, then those options are turned
off. If you did use a script or something to connect to AFM BBS,
then you have to have the script finished. If there's anything more
I can help with then post it right here. :)

Date: 1996-09-11 00:00:00 UTC
From: dbrewood@nest.demon.co.uk
Message-ID: <26415621_Beta04_OASIS_NEWS@nest.demon.co.uk>
Source record: 138140

In article <842467222_OASIS_@whalley.demon.co.uk>
john@whalley.demon.co.uk (John Whalley) wrote:-

>S3-ST (I'm using version 2) works very nicely with an ST and an S3. It
>says it supports the 3a and I don't see why it wouldn't work on a TT.

To quote from the Psion FAQ concerning the parts I maintain. In
addition to the below data there is now a new program ST-Link by
gbainbridge@cix.compulink.co.uk, which I recommned, as it's a lot
faster and more reliable than the other offerings (IMHO).

6.5 With an Atari (14/02/96)

6.5.1 General.

The Psion palmtop computers can be connected to all Atari ST compatable
computers ; from the Atari 520ST to the TT and Falcon models.

6.5.2 Linkage Hardware Required.

The 3-Link (PC) serial lead will be needed to connect the Psion's serial
port to the 25-pin serial connector on the back of the Atari machine. No
other additional hardware is needed.

6.5.3 Port Speed.

It should be noted that the basic unmodified ST computer can only handle
baud rates of 9600bps, wheras the STe/TT/Falcon computers can communicate at
the Psion's maximum speed of 19200bps.

6.5.4 Software available for interfacing the two computers.

There are two main packages designed to interface the Atari computers to the
Psion series 3/3a, these are:

6.5.4.1 S3-ST v2.00 by Keith Baines.

An extract from his documentation file can be found below:

- -

S3-ST Version 2.00
==================

File Transfer and Utilities Program

Atari 680x0 --- Psion Series 3/3a

Copyright (c) Keith Baines, March 1993 - August 1995

S3-ST provides a graphical file-manager with features familiar from the Atari GEM desktop. You can use it to:

- Copy files from the Atari to the Psion and vice-versa;

- Make regular full and incremental backups of your Psion;

- View files on either machine in a scrollable window on the Atari screen;

- Print files on either machine using a printer connected to the Atari's printer port;

- Delete files on either machine;

- Create new folders (or sub-directories) on either machine.

S3-ST uses a small companion program, STCOMMS.OPA, which can be installed as an application on the Series 3 or 3a. (The Series 3a version uses the enhanced facilities of that model.) The Psion 3-Link(PC) hardware is required.

In addition, the package includes DBFVIEW, a Desk Accessory for the Atari (there is also a normal program version), which can be used to browse through files created with the Series 3/3a Data application and to copy information from them via the GEM clipboard. For example it can be used to copy names and addresses into a word processor document on your ST.

- -

Keith can be contacted at the following address:

Keith Baines, 8 Lumley Court, Denmark Avenue, London, SW19 4HQ, UK

6.5.4.2 TRAFIC version 2.2 - ©1995, Club Psion Series 3

This program is keyware and will not allow files to be copied across machines without the software first being activated by a user key. The interface seems very much like 'Kobold' and '2in1' on the Atari's.

I can say little about it's features due to the documentation provided with it being written in French. However the authors can be contacted via the Club Series 3 (see "User Groups") attn: Laurent PLOMB.

6.5.5 Support for the Psion machines in the Atari world.

Network ST (NeST), the worlds largest fidonet(tm) technology network in the world (for Atarians) supports the Psion via:

- An Internet gateway to the COMP.SYS.PSION newsgroup via the U.COMP.SYS.PSION message echo.

- An Internet gateway to the COMP.BINARIES.PSION newsgroup via the U.COMP.BINARIES.PSION message echo.

- Support within the N.MISC.PALMTOPS message echo.

- Distribution of files into the Atari file networks via the 90.SUP.PSION file echo.

- Archive storage of Psion files (available by ftn file request only) at 90:90/0.0@nest.ftn.

For further information concerning NeST (Network ST) please contact Daron Brewood via:

Email: NeST: 90:90/0.0@nest.ftn
90:1/0.0@nest.ftn
90:100/0.0@nest.ftn
90:100/101.0@nest.ftn
90:100/106.0@nest.ftn (preferred address)

CIX: dbrewood

InterNet: dbrewood@nest.demon.co.uk
dbrewood@cix.compulink.co.uk

SnailMail: Daron M. Brewood, 7 Crescent Road, Portwood, Stockport, Cheshire, SK1 2QG.

6.5.6 Graphics Support on the Atari.

There is no current program on the Atari computers which can create or view .PIC files from the Psion, but there is a program to use to convert true colour JPG, and 256 colour GIF files, into .GIF's that take little space on the Psion. This is GEM-View by Dieter Fiebelkorn, and is highly recommended as it will quickly dither any picture through at it, and if steinberb dithering is used the end result is a very small 2-30k .GIF file, that will convert perfectly on the Psion to give a minimum sized clear picture. Very useful if you wish to carry family photo's round with you on the Psion, or to carry round proof graphic outlays.

4450. HELP - Falcon HD Problem! - HELP

Newsgroup: comp.sys.atari.st
Date: 1996-09-11 00:00:00 UTC
From: wvelting@ix.netcom.com
Message-ID: <517j03$b92@dfw-ixnews9.ix.netcom.com>
Source record: 138142

I bought one of the Falcon's from the Don Thomas Wacky Sale. I just bought a 540Meg 2.5" IDE HD and have installed it in my computer. I do not seem to be able to format the drive however. It recognizes the HD as the type it is, then goes into the formatting and just sits there. You can hear a very faint sound coming from the drive (nothing like what any of my 3.5" drives have sounded like when formatting them). I have let it do this for about 20 minutes and it just sets there. It is at the formatting screen with the busy cursor and just stays there.

If anyone can help, I would really appreciate it. Thanks.

The filename is n_play20.lzh if anyone else is looking for it.
<G>

>NED PLAYER 2.0
>Simple sample player for ATARI STE/TT/FALCON. Now you can
>change smooth frequency from 6 to 25 kHz in mono (SW MODE).
>And it automatically recognize some sound formats

This is a good little program - it handled everything I had time
to throw at it last night and played it all correctly. I like
the feature of the slider at the bottom of the window that lets
you adjust the playback speed "on the fly," too - there are a lot
of WAVs floating around with the wrong header info embedded in
them.

Only one thing I'd like to see added - command line input, so I
could keep N_play.ACC on-line and have it play a file from within
a GEM program without opening a window or requiring me to click
buttons and so on. Ideally, it should work as usual except that
it would default to a single play rather than looping.

Good job! Keep up the development!

Is there such a thing as a slide show program that will show pictures
in256 colour mode,320x200? either GIF,IFF or most other formats, but
not SPU,PCS,

It has to be freeware.....the reason being that I would want to
distribute it on a disk along with some 256 colour pictures,

Has anyone got one or know of one,

Ho yeagh..to run on a FM, or I suppose Ste only if push came to
shove?,

Cheers.............!ynoT

(Sorry for the delay)

I just released alvi 0.05beta.

Have a look at http://www.sax.de/~haase/atari.html

alvi (Alkor JPEG-Viewer) is a very special JPEG viewer.
It can handle large JPEGs with a very small need for RAM.
The display of the current version is only monochrome.

Greetings,
Uwe.

IC Magazine - the final arrangements
LAUNCH DATE
Issue One will now be released on 30 September 1996

A fortnightly printed newsletter dedicated to the Atari ST platform of computers in the UK. Each issue will be approximately 3 A4 pages and available through subscription only.
The name of our publication will be IC magazine (Independent Computing), which is appropriate because of the way the Atari users are now only supported by a network of small businesses and relatively free from the major multinational corporations.

The magazine's format
At risk of losing potential customers I've felt it important that the magazine takes an unusual format, so that it compliments other available magazines and diskzines instead of simply splitting readerships between us. Therefore, I have decided that it will be available.
Due to high costs of regular distribution and lack of financial backing, the magazine will initially be little more than a newsletter - only three A4 pages and self mailing.
The magazine will black and white and produced entirely on an Atari ST running Calamus 1.09n, although the software will hopefully be upgraded soon to SL.

Content
Due to its frequency, IC magazine will be largely news-based, although many ideas have been received for possible features and regular columns. These include: falcon coverage, s/ware and h/ware reviews, adverts, interviews, general articles, programming, games, beginners, MultiTOS, Mint, help with applications such as STik and Mintnet and comms/internet articles.

Costings and price
Whilst we have tried to keep prices down, and as we succeed in more cost-cutting we shall push the extra funds back into improving the magazine, the first three issues will be run to the following costs:
price of publication 50p
production costs 20p
distribution costs 20p
this leaves 10p to be re-invested in the magazine
I-C magazine will be available only as a 3 issue subscription for ï¿½1.50
Circulation. I am primarily concerned with getting the magazine up and running and improving the editorial content and production routines. The first three issues will therefore have a low average distribution of just 15 people.
We should then be ready for a distribution drive to push the

magazine's circulation to 100 people per issue, then in the next three months to 500 people. In a years time we hope to be reaching over two thousand readers every issue.

---------------------------**---------------------------

Subscription Rates

UK
1 issue 50p
10 issues ï¿½5

Other countries

This will have to be calculated. If you live outside the UK and would like to subscribe please contact me immediately.

NEWSie - a Usenet Newsreader
NEWSie uses the NNTP Internet protocol to read Usenet NEWS articles. It
provides a standard GEM interface complete with menu, windows, and mouse
selection.
It uses STiK as the Internet access manager via SLIP connection. Version
0.55 provides ability to read and save NEWS articles, and Full Posting
and Reply capabilities. NEWSie will be made available free of charge for
download from several ftp sites.

DEUCE 96 Press Release

The Atari Users of North Texas (A.U.N.T.) once again is hosting our Atari Computer Exposition in conjunction with the monthly DFW Xchange Corporation's Xchange Saturday activities at the beautiful Infomart facilities in Dallas, Texas. DFW Exhange Underground Computer Expo (DEUCE 96) will take place on Satuday, October 12 starting at 8:30 AM and running until 4:00 PM. The Xchange Saturday activities and DEUCE 96 are open to the general public and admission is free.

The Xchange Saturday is a monthly computer extravaganza which draws several thousand computer enthusiasts together to share their computer interests and enjoy some of the best computer hardware and software buys in north Texas. Of course, this October is special for us Atarians
because many of our finest developers and dealers are participating in the activities.

The Dallas Infomart facility, a replica of the famous 1895 World Fair Crystal Palace, is located in the heart of the Dallas Commerce District at 1950 Stemmons Freeway (I-35E). The facility is leased by the DFW Xchange Corporation each month to provide a community service to all computer users in the Metroplex area. The Atair Users of North Texas is one of many participating user groups that help support this community service by sharing our Atari computer interests, general computing expertise and providing users assistance to our local Atarians and the general public.

For more information regarding DEUCE 96 you can contact David M. Acklam at (214)242-9655 or on-line at d.acklam@genie.com. You can also contact Lonnie Webb on line at http://www.fastlane.net/~lwebb.

Hello there.

I realize that this topic has been broached before, but I am curious for any new info.

Though I am still a novice user of Cubase, I have not as of yet been able to get ANY form of metronome running. I've not found much for fixes or solutions except to create either a sample click that repeats every 1/4 note or to manually create a 1/4 click MIDI track. The first seems like a waste of HD space, the second would appear to use up one of my precious MIDI channels!

Is there something horrendously obvious that a blithering idiot such as myself may have overlooked? I've tried booting without anything, booting with xcontrol to run general.cpx to hopefully wake up the speaker by forcing it on, every conceivable metronome setting, hardware setups, an MIDI config, but have not stumbled upon the right combination.

Other hardware of note: I've got a Jamin/out 8/8 hooked up to the DSP, and the 44.1 kHz clock behind it.

Grrr. (angst in text form)

Thanks for any ideas. (a depressed, yet hopeful optimism in text form)

What I learned from Woody Allen:
Hey, if you're going to whine, at least be entertaining!

Mike wrote:
> Out of curiousity, does it come in a PLCC package for the STe? Or do
> you need an adapter (which is usually unreliable)?
You have to order a STE version which is a circuit-board that
fits in the ordinary PLCC package on the main-board.
The circuit board contains everything you need.
(you have to take the ordinary 68000 (8 MHz) out and put
that board in that package).
If you install it, I think you will never change back!!!

I'm saying I DO get the metronome to work.. try Greg's solution above,
make sure you have a good drum note selected to use as a click. I
always choose a closed hi-hat.

You still get your count-in and everything else..

$$$

Taking 5 minutes to read what follows can change your life :

I saw an article in an internet newsgroup telling me I could make $50,000 within a month for an investment of only $5.

I thought it was a huge joke. I spoke to my wife, attorney and friends about it, and they all agreed it was some kind of scam. I can't stand scams, because usually someone gets burned, and I didn't want it to be me. Of course, I rejected the idea at first. after a short period of about two weeks ,I thought : "I have already heard of such things. But on the Internet ?!?!? ". I decided that even if I had to throw 5$ into the fire, I wouldn't mind it that much, and gave it a try .After all I needed a LOT more than five dollars.

Two weeks later, I began receiving money in the mail! I could not believe it! Soon, hundreds, and then thousands of dollars began to roll in. Within 4 weeks, I had received a total of $32,445! It came from everywhere in the world. My bank account has changed its "-" into a big "+" (++++)!!!,I bought myself a car and things I wanted for a long long time for my wife and kids!

If you follow the three steps below, there is no reason why the same shouldn't happen to you! This is a legitimate investment opportunity. You invest $5, and you receive a return on your investment. So does the next investor. NOT ILLEGAL, NOT A CHAIN LETTER- PERFECTLY LEGITIMATE.

If you are not interested, then don't participate, but please print this article and pass it on to someone who may be interested, so they can take advantage.

The procedure is simple: 1) Write your name and address on 5 sheets of paper. Below that, write the words, "Please add me to your mailing list." Fold $1 note or bank draft or money order in each piece of paper and mail them to the following 5 addresses.:

1. Nir Levi,
PO BOX 342
Yavne, ISRAEL

2. Vic Williams
14307 Virtue Rd.
Lenoir City, Tn 37772 USA

3. Bill Brown
148 South Downlen #796
Beaumont, Tx. 77707 USA

4. Olivier Arcadipane
237 rue Francois Andre
7390 Quaregnon BELGIUM

5. Josef Malzer,
Brandhof 1
4701 Bad Schallerbach
EUROPE - AUSTRIA

2) Now remove the top name from the list, and move the other four names up. In other words, #5 becomes #4 and so on. Put your name as the fifth one on the list. Use a simple text editor such as Notepad, in your "accessories" window (If you have MS-Windows),or DOS editor. In fact, any editor will do.

3) Post the article to at least 200 newsgroups. There are 17,000, so it shouldn't be hard to find that many. Try posting to as many newsgroups as you can, and the bigger the newsgroup is, the more people are to see your message!

You are now in the mail order investment business, and should start seeing returns within a week or two. Of course, the more newsgroups you post to, the greater your return is. If you wish to remain anonymous, you may use a psuedonym, call yourself "The Manager", "The Boss", whatever but make sure your address is correct.

Now, here is why the system works:

-Of every 200 posts I made, I received 5 responses. Yes, only 5. You make $5 for every 200 posts with your name at #5.

-Each person who sent you $1 now also makes 200 additional postings with your name at #4. ie. 1000 postings. On average therefore, 50 people will send you $1 with your name at #4. $50.

-Your 50 new agents make 200 postings each with your name at #3 or 10,000 postings. Average return 500 people = $500. They make 200 postings each with your name at #2=100,000 postings=5000 return at $1 each=$5000.

-Finally, 5,000 people make 200 postings with your name at #1 and you get a return of $50,000 before your name drops off the list. AND THATS IF EVERYONE DOWN THE LINE MAKES 200 POSTINGS! Total income in one cycle=$55,000.

From time to time, when you see your name no longer on the list, you take the latest posting that appears in the newsgroups, and send out another $5, and put your name at #5, and start posting again. Remember, 200 postings is only a guideline. the more you post, the greater the return.

Lets review why you should do this. THE ONLY COST IS $5, AND 5 STAMPS, AND 5 ENVELOPES. Anyone can afford $5 for such an effortless investment with such SPECTACULAR RETURNS.

Some people have said to me, "what happens if the scheme is played out and no one sends me any money? "Big Deal, so you lose $5-but what are the chances of that happening ?? Do you Realize that NOBODY cares for the LEGAL chance of winning such a BIG money as 50,000.00 $$$$???? and all for a microscopic investment of five separate dollars? just think of all of the new Internet users that join the net every day!!!

There are millions of internet users, and millions of new net surfers every month !!! This is the great plus of the Internet, people all over the world can hear you and listen carefully if you talk reasonably. Everyone will take that chance ! I agree, If it wasn't the Internet, and was a small circle of people, the chance wouldn't have been so small. the amount of money had to be 200 times bigger, and the chances were zero. It wouldn't succeed.

But here, on the Internet, it is a giant village, where new thousands of members join in every day ! you CAN'T lose !!!!

Remember- read the instructions carefully, and play fairly. That's the only way this will work. Get a printout so you can refer back to this article easily.

Try to keep a list of everyone that sends you money and always keep an eye on the postings to make sure everyone is playing fairly. You know where your name should be.

REMEMBER-HONESTY IS THE BEST POLICY. YOU DO NOT NEED TO CHEAT THIS IDEA TO MAKE MONEY!! BESIDES,NOT PLAYING THE GAME FAIRLY IS ILLEGAL.SO LET'S BE REASONABLE AND PLAY FAIRLY,SO WE CAN ALL ENJOY THE INTERNET GOLD MINE.

GOOD LUCK FOR YOU ALL, And remember, play fair and you'll win, I don't want to mention what might happen to those who won't. AND AGAIN,SEE YOU NEXT TIME WITH SOMETHING YOU WANTED FOR A LONG TIME !!!

PS: How knows where I can get the Book from SHINICHI SEIKE
(Title: "The Principles of Ultra-Relativity")

Just wondering if anybody has gotten this great RPG to play on a Falcon 030? I had to install it on my Mega 'cause the install program wouldn't work on the Falcon either...I tried using Falcon SX to set the Falcon to imitate an STe but it wouldn't go past the first intro screen where it trashes the graphics then hangs there...I'm not using Backwards or Magi, does anyone know if either one of these will help? Thanks! :)

4489. Tweety board(?)

Newsgroup: comp.sys.atari.st
Date: 1996-09-12 00:00:00 UTC
From: cj439@FreeNet.Carleton.CA
Message-ID: <51ac2p$ff@freenet-news.carleton.ca>
Source record: 138023

I came upon a derelict 1040 with a Tweety Board dangling in/out of it. The outside end is, predictably enough, 3 RCA jacks, for audio hookup. I suppose it's one for each of the 3 channels of ST audio...

The inside end is a 28(?)pin thing which appears to be designed to replace one of the socketed chips, ie, DMA, video shifter? (the one inside the little tin box, connected to the modulator on FM's) or the chip on the bottom side of the keyboard. Question is, which chip does it replace?

You've probably guessed by now, there are no docs included. I've heard of Tweety board, but I've never seen one before.

Any tips, ideas, related info, or interesting tweety board stories would be appreciated.

4490. Word Perfect 4.1

Newsgroup: comp.sys.atari.st
Date: 1996-09-12 00:00:00 UTC
From: Richard Wegner <richardw@dmapub.dma.org>
Message-ID: <Pine.SV4.3.91.960912232029.23429A-100000@dmapub.dma.org>
Source record: 138024

Hello! I currently own Word Perfect 4.1 for the Atari ST. It works very good and I was even surprised when I got it that there was a version for the Atari ST in the first place. I heard somewhere there was a patch somewhere that would make it recognize Word Perfect 5.1 for the IBM PC (DOS) documents or make it so that Word Perfect 5.1 for the IBM PC could recognize the Word Perfect 4.1 for the Atari ST documents. I have the version that was copyright in 1989 and from what I heard this was done back in 1991. Anyone have any word on this? If you also have such a patch, please let me know and I would like to obtain it (if it is legal to do such). Thanks...

So, what do you think? I hope the search engines on the Atari FTP page will
assist in finding files quickly and efficiently.
Anyway, what do you (and others) think about my layout of the Atari pages
(and the other pages?)- I'm definitely interested in feedback so I can keep
improving them.
As for links- I'm adding new ones all the time as I come by them...

About the error message you received Gerry; it might have been that you
tried to access my pages just as I was uploading new updates or something.
Hope you get it working now.

:
: I use CAF.. but you don't have to waste a MIDI channel if you piggyback
: on your DRUM channel. I just use one of my drum sounds on MIDI channel
: 10 (which I'm using anyway) as my metronome, and it works great.
:
: > Other hardware of note: I've got a Jamin/out 8/8 hooked up to the DSP,
: > and the 44.1 kHz clock behind it.
:
: Hey, about that Jam-In 8.. does Cubase support it via the ADAT interface
: option, or do you have to use SoundPool's Audio Tracker to record?

The Jam-in 8 is supported... Cubase treats it just like ADAT inputs, with
any two ports selectable (1-2, 3-4, etc.) With 2.06, a very rudimentary
8-track recorder was included--record, stop, then you have 4 stereo files
which may be imported into CAF.

: What do you think of the sound? (I have a Jam-8 out, and I love it,
: except for the obnoxious noise it makes when booting up or changing
: hardware settings or sample rates.. I believe it's because of my old
: FDI, though).

I have no complaints about the sound. I've noticed that hyper-irritating
"POP" on powerup, CAF start, and any sort of hardware input-switching. I
have no FDI, so I think it's either CAF or the Jam-in, or both. The DSP
cable that came with it was very short, and as I don't have a rack setup,
I was forced to place it right above my Falcon on two little boxes so as
not to block the air flow for the cooling fan. The documentation was at
best sparse, and included was a disk with PSIDRV.PRG for the auto folder
(I've noticed no difference with this file loaded/not loaded. Any clues?)
and three soundpool demos.

I guess I misled myself to believe that the eight audio ins could be
integrated into CAF and act as a simultaneous input with effects and all
that rot. Still, it's a very powerful setup, and should be even more so
once I get more comfy with the system and snag a 16 channel mixer to patch
and bounce. Ah, well.

But Mark, you haven't heard of anyone reportedly getting the metronome to
work? Is it just there for show? I guess I'll try your drum idea. Of
course, this would take the 2-bar song lead-in out, or else the drum track
would have to be started two bars before the rest of the song, which I

suppose is not such a great horror, but none of this should really be necessary. I have a metronome selector box, I tell CAF yes, I want it on, or maybe a MIDI click, thanks for asking, CAF, and then I get nada.

No response from Steinberg, letter written same time as original post. I sent it to Mac serviceweb, since there doesn't seem to be any icon to click for Atari service. It's probably in the circular file by now, stored carefully, bit by bit, in /dev/null.

Hmph.

Hi all..!

Sorry about my ignorance! But I need some info on the TT computer.
I have an 1040 STe now and want to get a TT but I'm not sure what will
still be compatible from my old setup..? i.e. Monitors color/mono, games
utils, music, DTP.

If someone could give me some info on this It would be very appreaciated!
I have an SC1224 Color and a SM125 Mono monitors .... does the TT have
different resolutions that will not work with these monitors? Will I not
be able to take full advantage of the TT with these monitors?
What about rez sizes it is capable of.. and also color pallettes?

Thanks!

> anybody else.
I'll go for the former. Seeing as the only military craft in the East
Moriches area was a transport, which aren't prone to shooting missles,
I don't see it as a friendly fire issue.

>
> Mike

That's because almost all falcon acc doesn't support extra CPU/bus cache
as the T28/T36 does. Try to turn it off (the cache) and see (almost no different
between 8 Mhz and 36 Mhz). But in 36 Mhz, mono my falc is at least
as fast as my old T28 (I once had. Had to sell it to afford buying my falcon).
Before I sold my hotted STE i ran a lots of bechmark tests with GEMBENCH which
I can post if anyone is interested.

best regards

On my part I rarely use Netscape for ftp because with large files it
doesn't work properly. If Netscape doesn't work for you simply use
anonymous ftp and a standard ftp client. The ftp site for HDDRIVER is:
acp5.chemie.uni-kl.de. The demo version is located in /pub/atari/.

Why do you want to format it at all? SCSI and IDE drives are always
formatted when you buy them. So all you need to do is to partition the
drive. Note that some IDE drives are damaged if you try to format them.
(This is no joke.)

4518. About atari poll database.

Newsgroup: comp.sys.atari.st
Date: 1996-09-12 00:00:00 UTC
From: "K. Ellis" <kellis@primenet.com>
Message-ID: <Pine.BSI.3.95.960912045548.21340C-100000@usr09.primenet.com>
Source record: 138083

Hi guys, The atari poll was well accepted so far, but not enough to
built a database accurately. Need more users to fill this out.
It could be important, I already got contacted by some programer to
have some of the results. But I need your help.
P.S: I do that for free, I WILL NOT MAKE PAY ANYONE WHO WANTS THE
RESULTS.

Here are the questions...

-You have an Atari:

st[ ], ste[ ], megast[ ], megaste[ ], TT[ ], falcon[ ]

stacy[ ], portfolio[ ], tt compatible (medusa, directT etc)[ ]

Mac+magicmac[ ], PC+magicPC[ ], unix+stonx[ ], other[ ].

-what memory configuration:

-what accelerator:

-what screen: monochrome[ ], color[ ], TV[ ], (S)VGA[ ].

-did you add a graphic card:[ ], if yes, what resolution can you get:

-Do you have a hard drive:[ ] , if yes what size:

-what software do you use the most: (even cracked, but don't
say it if so)

-what OS do you use the most: TOS[ ], Mint[ ], Magic[ ], Linux[ ] other[ ]

-What is your main occupation with your atari: select 2 max.
DTP[ ], Midi[ ], Graphic[ ], Internet[ ], Word processing[ ], Database[ ]
Programming[ ], Games[ ], Audio recording[ ], Video editing[ ], Other[ ].

-what do you consider the best shareware:

-what would you like to have on your atari:

-What program would you like to buy if it was better than it is:

-What's your name: (optional)

-how long have you been using your atari:

COMMENTS: (optional)

Email:Kellis@primenet.com

Web http://www.primenet.com/~kellis/

The documentation for HSMODEM7 says you can get 57600 on an 8 Mhz ST.

It can't figure out if it needs to have the RSVE modification done also.

I expect it does.

$$$

Taking 5 minutes to read what follows can change your life :

I saw an article in an internet newsgroup telling me I could make $50,000 within a month for an investment of only $5.

I thought it was a huge joke. I spoke to my wife, attorney and friends about it, and they all agreed it was some kind of scam. I can't stand scams, because usually someone gets burned, and I didn't want it to be me. Of course, I rejected the idea at first. after a short period of about two weeks ,I thought : "I have already heard of such things. But on the Internet ?!?!? ". I decided that even if I had to throw 5$ into the fire, I wouldn't mind it that much, and gave it a try .After all I needed a LOT more than five dollars.

Two weeks later, I began receiving money in the mail! I could not believe it! Soon, hundreds, and then thousands of dollars began to roll in. Within 4 weeks, I had received a total of $32,445! It came from everywhere in the world. My bank account has changed its "-" into a big "+" (++++)!!!,I bought myself a car and things I wanted for a long long time for my wife and kids!

If you follow the three steps below, there is no reason why the same shouldn't happen to you! This is a legitimate investment opportunity. You invest $5, and you receive a return on your investment. So does the next investor. NOT ILLEGAL, NOT A CHAIN LETTER- PERFECTLY LEGITIMATE.

If you are not interested, then don't participate, but please print this article and pass it on to someone who may be interested, so they can take advantage.

The procedure is simple: 1) Write your name and address on 5 sheets of paper. Below that, write the words, "Please add me to your mailing list." Fold $1 note or bank draft or money order in each piece of paper and mail them to the following 5 addresses.:

1. Nir Levi,
PO BOX 342
Yavne, ISRAEL

2. Vic Williams
14307 Virtue Rd.
Lenoir City, Tn 37772 USA

3. Bill Brown
148 South Downlen #796
Beaumont, Tx. 77707 USA

4. Olivier Arcadipane
237 rue Francois Andre
7390 Quaregnon BELGIUM

5. Josef Malzer,
Brandhof 1
4701 Bad Schallerbach
EUROPE - AUSTRIA

2) Now remove the top name from the list, and move the other four names up. In other words, #5 becomes #4 and so on. Put your name as the fifth one on the list. Use a simple text editor such as Notepad, in your "accessories" window (If you have MS-Windows),or DOS editor. In fact, any editor will do.

3) Post the article to at least 200 newsgroups. There are 17,000, so it shouldn't be hard to find that many. Try posting to as many newsgroups as you can, and the bigger the newsgroup is, the more people are to see your message!

You are now in the mail order investment business, and should start seeing returns within a week or two. Of course, the more newsgroups you post to, the greater your return is. If you wish to remain anonymous, you may use a psuedonym, call yourself "The Manager", "The Boss", whatever but make sure your address is correct.

Now, here is why the system works:

-Of every 200 posts I made, I received 5 responses. Yes, only 5. You make $5 for every 200 posts with your name at #5.

-Each person who sent you $1 now also makes 200 additional postings with your name at #4. ie. 1000 postings. On average therefore, 50 people will send you $1 with your name at #4. $50.

-Your 50 new agents make 200 postings each with your name at #3 or 10,000 postings. Average return 500 people = $500. They make 200 postings each with your name at #2=100,000 postings=5000 return at $1 each=$5000.

-Finally, 5,000 people make 200 postings with your name at #1 and you get a return of $50,000 before your name drops off the list. AND THATS IF EVERYONE DOWN THE LINE MAKES 200 POSTINGS! Total income in one cycle=$55,000.

From time to time, when you see your name no longer on the list, you take the latest posting that appears in the newsgroups, and send out another $5, and put your name at #5, and start posting again. Remember, 200 postings is only a guideline. the more you post, the greater the return.

Lets review why you should do this. THE ONLY COST IS $5, AND 5 STAMPS, AND 5 ENVELOPES. Anyone can afford $5 for such an effortless investment with such SPECTACULAR RETURNS.

Some people have said to me, "what happens if the scheme is played out and no one sends me any money? "Big Deal, so you lose $5-but what are the chances of that happening ?? Do you Realize that NOBODY cares for the LEGAL chance of winning such a BIG money as 50,000.00 $$$$???? and all for a microscopic investment of five separate dollars? just think of all of the new Internet users that join the net every day!!!

There are millions of internet users, and millions of new net surfers every month !!! This is the great plus of the Internet, people all over the world can hear you and listen carefully if you talk reasonably. Everyone will take that chance ! I agree, If it wasn't the Internet, and was a small circle of people, the chance wouldn't have been so small. the amount of money had to be 200 times bigger, and the chances were zero. It wouldn't succeed.

But here, on the Internet, it is a giant village, where new thousands of members join in every day ! you CAN'T lose !!!!

Remember- read the instructions carefully, and play fairly. That's the only way this will work. Get a printout so you can refer back to this article easily.

Try to keep a list of everyone that sends you money and always keep an eye on the postings to make sure everyone is playing fairly. You know where your name should be.

REMEMBER-HONESTY IS THE BEST POLICY. YOU DO NOT NEED TO CHEAT THIS IDEA TO MAKE MONEY!! BESIDES,NOT PLAYING THE GAME FAIRLY IS ILLEGAL.SO LET'S BE REASONABLE AND PLAY FAIRLY,SO WE CAN ALL ENJOY THE INTERNET GOLD MINE.

GOOD LUCK FOR YOU ALL, And remember, play fair and you'll win, I don't want to mention what might happen to those who won't. AND AGAIN,SEE YOU NEXT TIME WITH SOMETHING YOU WANTED FOR A LONG TIME !!!

PS: How knows where I can get the Book from SHINICHI SEIKE
(Title: "The Principles of Ultra-Relativity")

It sounds like there is either a script running or, more likely, your
Autologin sequence has
not finished. To temporarily correct either problem, just press Shift-Undo.

To permanently fix the problem, you'll have to figure out why STalker
is getting stuck on a line of your Autologin sequence.

Any Oasis veterans out there?
I am using Oasis v.1.35E and need some help with getting news from newsgroups. I can post to a newsgroup, but I cannot get news from any selected newsgroup. I can get news headers from all newsgroups however. I can only get Oasis to reconise all newsgroups. And I cannot get Oasis to reconise a newsgroup selected through the Daily Net box. I have to add ...nntp groups comp.sys.atari.st to my Startup Nos file before I can post to this group. But after doing this, I can't get any news. I get connected to the news server and shortly after if I have no postings, I get the message Closing News Session. If any one can help with this problem I would sure appreciate it.
Also I have Oasis v.2.05 but it seems real buggy. I get PPP packet error and can do nothing else. Is there a fix for Oasis v.2.05 and will it work with PPP?
If anyone can help with these problems, please send me E-mail.
Thanks,
Phantom

Cross-posted to: alt.steinberg.cubase,comp.sys.atari.st

Do you have mastertrack selected in your metronome page? it should
not be. You have to tell it midi click and pick the note you want, on
most drum modules a rimshot r sidestick is c#1, maybe you have a note
selecte dthat has no sound.
Also make sure in the MIDI menu you have all inputs being used. I
use CAF all the time and have never had a problem with the metronome

>connection I know.

It's not possible. The serial port on the old Mega (not the "e") is limtied
to 19200 bps maximum - you must modifiy the MFP clock (hardware modification)
to get higher speeds, and 38400 is probably the best you'll ever manage.

Add a line as follows (made-up address, you'd probably better find a real
one!):

NAMESERVER1 = 100.190.205.11

I don't know if it will be used, however. For one of the local ISPs here in
Portlnad, I used a different ISP's DNS because the first one's DNS is v-e-r-y
s-l-o-w at resolving ALL the time; I put the original one in as NAMESERVER1
just in case, though.

Do you have the * at the end of each newsgroup line in yout NNTP.DAT File?
That's needed because of a bug in INN 4.0 (the most-often used news server
software "out there" right now). It's a nuisance, too, because of all the
unwanted newsgroups that "tag along" that way.

Also, be sure you do NOT have a line in STARTUP.NOS that says "nntp groups" at
all - if you do, the NNTP.DAT is ignored.

m> to be able to help much there. good luck.bonne chance

The Link takes it's power (5v) from the TERMPWR line (pin 26) on the SCSI bus. Is the LED on the Link working? You can check with a meter. Or look at your drive jumpers/switches -one should give you the option of putting 5v on TERMPWR.

Where can the TAF distribution be found?
I've got links to several sites having the KGMD distribution on my web page
(Atari ST section), but none to TAF.
I'd also like to get some brief non-technical pointers on which files I
need to download and how to get started without too much hassle.
(I'm not a programmer, just a user).

I'd be happy to start off with a good UNIX shell- that's what I really
need; prefferably Tenex (tcsh), and moving on I'd like to try out X11 and
MiNTnet.

From: phantomm@harold.eastky.com
Message-ID: <842631104_OASIS_@harold.eastky.com>
Source record: 138107

I have ran into a strange problem with sound memory recording with Atari Sam on a Falcon 030 with Tos 4.04/14megs RamGizmo. I am wondering if any other Falcon owner has had the following happen...

When I record music or sound in memory using SAM v1.2 (Atari) Any recording that goes over 4megs will not play back or delete correctly. It seems that only the around the first 4megs will play or be deleted from the first recording. If I record a second sample. Any thing over 4 megs gets merged with the first sample even though I deleted it. Also sometimes when playing back a sample over 4 megs, I get very strange sounds (beeps/noise).
I have also had similar strange results when recording in memory with a demo program called Audio.
However, the demo program SuperSam works correctly when I record in memory. I have not had any problems with it. Also I had no problems with memory recording with SAM (Atari) using the stock 4 meg board.
Does this mean that SAM (Atari) isn't compatible with 14megs? I find that a little hard to believe. I really like the Atari Sam program and would like to find a fix for this.
Does anyone have any info on what could be causing this?
Please send E-mail. 8-)

Thanks,
Phantom

Famous last words. Soon, you won't be able to learn it
fast enough. You'll want to get better and better so
you can watch more anime and read more manga.
^_^ kanji for :-)

> We have a programme in the computer language lab for
> learning Japanese. It's a hypercard programme that runs on the Mac.
> It uses speech synthasis (or maybe even samples) and has a game for learning
> hiragana, katakana, and kanji.

> if you can point me to an FTP or webpage that has it I'd be greatful.

Try this site out:
http://www.mickey.ai.kyutech.ac.jp/cgi-bin/japanese

You first need to configure your machine,
by clicking on configure. Then I recommend
you try out the kanji server for games,
quizzes, and you name it including on-line
dictionary support. You can learn kanji
by frequency of use, grade level, by reading,
etc.

There are links to all kinds of on-line Japanese
resources--try them out.

Since you've got a 386, you're best bet for
language support is to use Shodouka launchpad.
Your PC will be able to read and print
Japanese characters without software. If
you had Windows 95 and a faster machine, I'd
recommend NJWin at this URL:

<http://www.njstar.com.au/njwin/njwin.htm>

However, Shodouka is just
great. It's a mediator. It intercepts
symbols it suspects of being Japanese characters

and converts them to their true form. Go
to this URL and it explains all you need to know:

<http://www.lfw.org/shodouka/>

The best way to learn Shodouka is to take it
out for a spin. There's a section called
"Try it Out!" I recommend you click on the
little square with the squiggly lines inside
to the left of Hitoshi Doi's Anime Page--one
of the best URLs for anime fans.

BTW, neither NJWin nor Shodouka are word
processors. However, there is an excellent
freeware word processor out there--JWP.
Just post and ask the question when
you're ready and we'll give you all the
details. It'll run under Windows 3.1,
although a 386 is a bit too slow for it.
>
> I'm looking at the course texts right now and it all just looks like pages
> covered with strange insects to me. I get this uneasy feeling I can kiss my
> grade-point average goodbye. ;)
>
> This is the first course I've ever been nervous about taking. Oi!

It gets easier. Don't be nervous. Enjoy. Soon, it will be
your favorite subject.

The TAF package can be found on ftp.cnam.fr /pub/Atari/Mint/Chimera/
You need the install.zip and the 2a.tgz, 2b.tgz, 3.tgz etc. or
install.zip and x_total.zip (contains 2a.tgz, etc.). Be aware it can
take a long time to download the whole stuff.
The installation is very easy. Just follow the install.doc.

Normally, I'd agree, but one of the postmasters just had the gall to complain to my employer about my complaint to him! he claimed I "threatened" him, but he was fool enough to leave my quote to him in the message (see below) and it's obviously not a threat. Oh, and you left off one of the best places to send chain spam complaints: customer@email.usps.gov - that's the US Postal Service. Posting chain letters is a crime in almost every country on this planet.

My complaint text was:

>>The following inappropriate excessive cross-post originated at your service.
>>Please issue a cancel for the message and take action to prevent further
>>abuse.

That's copied directly out of the complaint I sent to the service provider - hardly a threat as far as I can see.

I've got an ancient 1040 and 520 that were quietly retired nearly 5 years ago. I recently came across STonX and was delighted to find an emulator for one (two) of my favourite machines... So after digging the boxes out, and discovering that the 1040 had not aged well, I set up and dumped the 520's TOS.

It's version 1.00! STonX requires at least 1.4 to do anything useful and wants 2.05 or 2.06. While I can buy the ROMs themselves for about $60, I also have to get an "adapter" board for another $90.

The question after all that is: Does anyone know where I can get a disk-based TOS version 2.06?

It was only made legally available to registered developers; everyone else had to buy the ROM version (usually installed in a 'puter). I do have a spare set of TOS 2.05 chips I'd swap you for the dead 1040, however - I can use the parts. You might want to take a look at the ROM chips in both machines - if they use the same number of chips, you could swap chips and see what's in the 1040 by booting the 520 with those instead of the old ROMs. That would also get you up to where you can make your own ROM images, if you have 1.4 in there.

Hi gentlemen: I have this file that originally was CS04.JPG; then
I renamed it to CS04 and now I cannot delete it, rename, view, etc, the
Falcon (TOS 4.04) says: "this application cannot find the file..." not even
Diamond Edge is of help. It is over 64k and this is counted as part of
bytes used in that folder. Suggestions?

I am seeking to buy:

TOS 1.4 chips (6 chip set)

Blitter chip

Anyone out there with some spare parts sitting around?

Reply via email if you have either of these items for sale.

Thanks,
Mike

Ok, I guess I better start at the beginning! :) How long are mod file samples?
The guy ask for a mod file of a Bon Jovi song. I assumed it would be more than
2 seconds long... My assumption was based on, how would he know what he was
getting, if only 2 seconds of the song was in the mod?

Obviously, I don't know beans about music & music software. Maybe I better
understand that, before asking my questions... :)

J > protection standards are adhered to.

That would be like saying 'taking the law into your own hands is ethical.' And as long as those taking the law into their own hands are law-abiding to begin with, it generally works. :)

Once law-breakers start taking the law into their own hands, it falls apart, and the normal channels of law have been reduced because everyone is taking the law into their own hands... And we have problems.

In theory, you have a point. Considering the failings of the real world, your system will fall short.

Following the law would give us the best results. No piracy, and no hanky-panky from the developers. That would be ideal.

Not all humans follow the law. Your way won't work any better than the current way. Again, I understand your point, in theory.

TG> formatting, surely the disk that takes stuff from atari to pc
TG> will also take stuff back from pc to ATARI??

Well, in this case there are lots of ST utilities to make Atari formatted disks
compatible with MS/Dos. I assumed he had seen these, but not bothered looking
at them, as he didn't need to go that way.

On the other hand:

TG> tons of pi1 pictures, how to convert them to pc format, about
TG> a dozen answers told him to use gemview or imagecopy.... but
TG> missed the point that he "had" an st,

I noticed that too, and thought everyone missed the boat too! :) A long time
ago, I thought I saw a pd program for DOS that could read Degas pictures. Never
got it, could be very wrong, but a dim light in the grey matter thinks it was
so...

TG> (1)"unfortunatly the software only works on a ST" (2)"but if
TG> you have an ST then it will still be useful to you" Take
TG> into consideration that it was.. Made on a ST. By an ST user.
TG> For ST users. Made with ST software. Then say out load quote
TG> number one!!!!

Why do you wish to exclude all the '030 users from your software? How would it look if someone reviewed IBM software, saying it was just great, but only worked on '286 machines these days? :)

I'm no programmer, but aren't there software libraries, tips & tricks, programming libraries, & compendiums that allow software to work on _all_ TOS machines? Can't you find software testers with a variaty of machines? (Software should be tested by a number of people, I would think, before it's released for sale.) Other programmers do.

If you write software for a subset of the platform, your software will have less appeal to 'everyone.' How about folks who have an ST, but are thinking about getting a used TT or Falcon? Surely they will want to know your software will not be ported to the new macine. Surely it is unfortunate to them that the software only works on an ST. I doubt they would make the investment in your software, even if they currently own an ST. Quote number one makes perfect sense to me. :) It is natural for older, slower machines to give way to newer, faster models. Software that does not keep up with this progression is at a disadvantage in the marketplace, and will be reviewed as such.

I also mean this in a friendly manner. :) I appreciate your difficulty. :) And I'm glad your are writting software for the TOS platform, whatever versions you support! :) But, I encourage software reviewers to continue to mention compatibility problems that software has with TOS versions, and I would encourage software developers to ensure compatibility with as many TOS' as possible. :)

4577. Atari article in WIRED Magazine.

Newsgroup: comp.sys.atari.st
Date: 1996-09-13 00:00:00 UTC
From: msteve@magnus.acs.ohio-state.edu
Message-ID: <51aj2m$h1r@charm.magnus.acs.ohio-state.edu>
Source record: 138036

Found a neat little (well shown actually) article about Atari in the October 1996 issue of Wired magazine. It basically goes through a brief history of Atari when it started "From $500 to $452 Million and back again." Gives some bios of people we adore (Jeff Minter with a snippet of info on his current project) to people some of us loath and detest (No, not Peter, but Jack Tramiel).

Though it does tell us that Atari itself has withered away, it shows us what Atari has done for the Computing Industry. One way that it shows this is by a four page wide graphic tracing the paths of the major people who worked there, what they did and what they are currently doing.

This article is extremely well done, and I thought I'd share it with the Atari Community who probably wouldn't be inclined on the whole to purchase this magazine. Also want to publicly thank the author who gleaned all this information, Nick Montfort, for doing a superb job in its creation.

If you want to see what Atari has done, and what its people are doing right now all condensed in a usefull and easy to follow timeline, this is the article for you.

Michael Steve jr.

Yo! Harry Dude!

Whilst under caution Harry said to Officer Steve :~)

HS>>> ISTR they've now dropped the T28 and T36 due to the manufacturer
HS>>> going down the tubes

SS>> And they were unreliable apparently.

HS> Don't tell Paul... <g>

Oops!, hi Paul, nice weather in siberia, for the time of year. 8~|

HS>>> and have (somehow) brought back the AdSpeed for both STFM and STe
HS>>> for somewhere around 125ukp.

SS>> It never went away, ICD are still very active, Robbo's words.

HS> Are System Solutions doing this Link96 device, do you know?

I didnt see nay, then again that is not one of the things i had in mind
actually, so cant comment.

Regards from STEve & his nice warm cosey PAK'd MegaSTE.

4580. Want To Buy: Overload for the ST

Newsgroup: comp.sys.atari.st
Date: 1996-09-13 00:00:00 UTC
From: calst40+@pitt.edu
Message-ID: <51amoq$eac@usenet.srv.cis.pitt.edu>
Source record: 138039

I absolutely loved this game when I used to play it on the C-64. I know there was an ST version made because it gave programming credits in the back of the manual for all the different versions. I would like to purchase this game from anyone who has it. I tried calling Toad Computers to see if they had it with no luck. The game was put out by Virgin software and was brilliant. If any of you have a copy of this game you'd be willing to part with please get in touch with me. I'm also looking to buy a copy of Civilization.

If you have either Overlord or Civilization them please email me.

Carole

We've tested the Zip on CAF and got a max of 6 tracks continuous before the "You need a faster hard drive" message popped up. I'm told the E-Z will do eight, but haven't seen it myself. Both are on the small side for music production. Consider a Jaz.

In article <519i2j$59i@ornews.intel.com>
RichardX_Tietjens@ccm.jf.intel.com (Rich Tietjens) said:-

>Also, be sure you do NOT have a line in STARTUP.NOS that says "nntp groups" at
>all - if you do, the NNTP.DAT is ignored.

Actually it's the other way round. If NNTP.DAT is present the "nntp
groups" command is ignored.

If both are missing NOS.TTP sends a single * request resulting in the
server sending you all news in all groups. To prevent this from
happening it's best to keep "nntp groups" in STARTUP.NOS just in case
something would go wrong with NNTP.DAT

By the way I found the reason yesterday why Oasis sometimes has
problems when unbatching. The other day someone posted an article with
a UNIX script with lines beginning with the the same two characters as
in BATCH.TXT (just before "rnews"). It seems that Oasis is only
looking for those two characters instead of the whole phrase when
unbatching. Not very clever imho.

4583. INSIDER TIPS - Read it now

Newsgroup: comp.sys.atari.st
Date: 1996-09-13 00:00:00 UTC
From: g.geco@universal.net
Message-ID: <51b95c$597@sun.magnet.at>
Source record: 138042
Cross-posted to: comp.sys.amiga.hardware,comp.sys.amiga.programmer,comp.sys.arm,comp.sys.atari.st,comp.sys.atari.st.tech,comp.sys.be,comp.sys.handhelds,comp.sys.hp.apps,comp.sys.hp.hardware,comp.sys.hp.hpux,comp.sys.hp.misc,comp.sys.hp48,comp.sys.ibm-pc

Taking 5 minutes to read what follows can change your life :

I saw an article in an internet newsgroup telling me I could make $50,000 within a month for an investment of only $5.

I thought it was a huge joke. I spoke to my wife, attorney and friends about it, and they all agreed it was some kind of scam. I can't stand scams, because usually someone gets burned, and I didn't want it to be me. Of course, I rejected the idea at first. after a short period of about two weeks ,I thought : "I have already heard of such things. But on the Internet ?!?!? ". I decided that even if I had to throw 5$ into the fire, I wouldn't mind it that much, and gave it a try .After all I needed a LOT more than five dollars.

Two weeks later, I began receiving money in the mail! I could not believe it! Soon, hundreds, and then thousands of dollars began to roll in. Within 4 weeks, I had received a total of $32,445! It came from everywhere in the world. My bank account has changed its "-" into a big "+" (++++)!!!,I bought myself a car and things I wanted for a long long time for my wife and kids!

If you follow the three steps below, there is no reason why the same shouldn't happen to you! This is a legitimate investment opportunity. You invest $5, and you receive a return on your investment. So does the next investor. NOT ILLEGAL, NOT A CHAIN LETTER- PERFECTLY LEGITIMATE.

If you are not interested, then don't participate, but please print this article and pass it on to someone who may be interested, so they can take advantage.

The procedure is simple: 1) Write your name and address on 5 sheets of paper. Below that, write the words, "Please add me to your mailing list." Fold $1 note or bank draft or money order in each piece of paper and mail them to the following 5 addresses.:

1. Nir Levi,
PO BOX 342
Yavne, ISRAEL

2. Vic Williams
14307 Virtue Rd.
Lenoir City, Tn 37772 USA

3. Bill Brown
148 South Downlen #796
Beaumont, Tx. 77707 USA

4. Olivier Arcadipane
237 rue Francois Andre
7390 Quaregnon BELGIUM

5. Josef Malzer,
Brandhof 1
4701 Bad Schallerbach
EUROPE - AUSTRIA

2) Now remove the top name from the list, and move the other four names up. In other words, #5 becomes #4 and so on. Put your name as the fifth one on the list. Use a simple text editor such as Notepad, in your "accessories" window (If you have MS-Windows),or DOS editor. In fact, any editor will do.

3) Post the article to at least 200 newsgroups. There are 17,000, so it shouldn't be hard to find that many. Try posting to as many newsgroups as you can, and the bigger the newsgroup is, the more people are to see your message!

You are now in the mail order investment business, and should start seeing returns within a week or two. Of course, the more newsgroups you post to, the greater your return is. If you wish to remain anonymous, you may use a psuedonym, call yourself "The Manager", "The Boss", whatever but make sure your address is correct.

Now, here is why the system works:

-Of every 200 posts I made, I received 5 responses. Yes, only 5. You make $5 for every 200 posts with your name at #5.

-Each person who sent you $1 now also makes 200 additional postings with your name at #4. ie. 1000 postings. On average therefore, 50 people will send you $1 with your name at #4. $50.

-Your 50 new agents make 200 postings each with your name at #3 or 10,000 postings. Average return 500 people = $500. They make 200 postings each with your name at #2=100,000 postings=5000 return at $1 each=$5000.

-Finally, 5,000 people make 200 postings with your name at #1 and you get a return of $50,000 before your name drops off the list. AND THATS IF EVERYONE DOWN THE LINE MAKES 200 POSTINGS! Total income in one cycle=$55,000.

From time to time, when you see your name no longer on the list, you take the latest posting that appears in the newsgroups, and send out another $5, and put your name at #5, and start posting again. Remember, 200 postings is only a guideline. the more you post, the greater the return.

Lets review why you should do this. THE ONLY COST IS $5, AND 5 STAMPS, AND 5 ENVELOPES. Anyone can afford $5 for such an effortless investment with such SPECTACULAR RETURNS.

Some people have said to me, "what happens if the scheme is played out and no one sends me any money? "Big Deal, so you lose $5-but what are the chances of that happening ?? Do you Realize that NOBODY cares for the LEGAL chance of winning such a BIG money as 50,000.00 $$$$???? and all for a microscopic investment of five separate dollars? just think of all of the new Internet users that join the net every day!!!

There are millions of internet users, and millions of new net surfers every month !!! This is the great plus of the Internet, people all over the world can hear you and listen carefully if you talk reasonably. Everyone will take that chance ! I agree, If it wasn't the Internet, and was a small circle of people, the chance wouldn't have been so small. the amount of money had to be 200 times bigger, and the chances were zero. It wouldn't succeed.

But here, on the Internet, it is a giant village, where new thousands of members join in every day ! you CAN'T lose !!!!

Remember- read the instructions carefully, and play fairly. That's the only way this will work. Get a printout so you can refer back to this article easily.

Try to keep a list of everyone that sends you money and always keep an eye on the postings to make sure everyone is playing fairly. You know where your name should be.

REMEMBER-HONESTY IS THE BEST POLICY. YOU DO NOT NEED TO CHEAT THIS IDEA TO MAKE MONEY!! BESIDES,NOT PLAYING THE GAME FAIRLY IS ILLEGAL.SO LET'S BE REASONABLE AND PLAY FAIRLY,SO WE CAN ALL ENJOY THE INTERNET GOLD MINE.

GOOD LUCK FOR YOU ALL, And remember, play fair and you'll win, I don't want to mention what might happen to those who won't. AND AGAIN,SEE YOU NEXT TIME WITH SOMETHING YOU WANTED FOR A LONG TIME !!!

Can anyone suggest a good scanner for the ST? I'm in the market, but have no idea what's available (I'm in the UK!).

I'm after a flat bed color (colour!) scanner - anyone know which makes are good, and how much should I pay?

Also, what software will I need? Does anyone know a good supplier in the UK who will bundle in the required software?

Questions, questions! Thanks for any advice!

Simon

>> and e-mail it to me.

>I can but I no longer have a terminal program that supports uploading.
>I have no clue how to attach binaries to things like news and e-mail.
>If you can explain how to I can send the Gemsys folder.

I was interested to read your mail regarding Gemsys. I have been
trying for a few days to get this to work on my 486 with Win 3.11 and
win32s version 1.3 (1.2 does not allow the MagicPC demo from Toad to run).

I cannot get the Toad demo to get passed the date error as it brings
up the ST desktop. But the one at AOL which looks like a newer demo does
get all the way up and does run on my machine. BUT if I now use its Gemsys
folder and tos image the Gemulator demo runs but gives me an error every
time I try to access a disk drive. (not very useful !)

So I would VERY much like to try the Gemsys folder you or anyone else has !

The normal way to get any of this stuff onto the net or mail is to
archive up the files, use something like STZIP to get a zip file.

Now you have to UUENCODE the zip file, this turns the binary file into
a text file so that all the net s/w passes it on instead of responding to
the binary data !

You can now include this UUE'ed data in your mail. One complication is
that Gemsys is BIG so you may need to split it into chunks, this can normally
be done by the UUENCODE program you use. 32K certainly works, bigger posts
may do.

There may be some legal issue about posting it to the news group.

I hope this helps, if it does PLEASE can I have a copy :-)

FOR SALE

ATARI 520 ST, 512k, MOUSE, PS, no manuals
TWO SF 314 DRIVES, CABLES, PS, no manuals

I have some software, but it's mostly free/shareware.

$60 plus shipping. Offers are welcome.

All the above equipment is in working condition. The only thing that is
wrong with it is that one of the drives formatting is a little off,
but it operates just fine while performing other tasks.

I would prefer to ship within the US, but I will consider foreign offers.

Please e-mail if you are interested.

Source record: 138053
Cross-posted to: rec.arts.anime.misc,comp.sys.atari.st

G'day, I'm taking an elective in Japanese this year at Macmaster University here in Hamilton (and no, I'm not taking Japanese just to be able to watch anime and read manga ;). We have a programme in the computer language lab for learning Japanese. It's a hypercard programme that runs on the Mac.
It uses speech synthasis (or maybe even samples) and has a game for learning hiragana, katakana, and kanji.

Does anyone know if theres a shareware/freeware programme for the PC (DOS or Win3.1, 386 5meg) or the Atari ST (monochrome prefered)? Also if you can point me to an FTP or webpage that has it I'd be greatful.

I'm looking at the course texts right now and it all just looks like pages covered with strange insects to me. I get this uneasy feeling I can kiss my grade-point average goodbye. ;)

This is the first course I've ever been nervous about taking. Oi!

Hi, I have to say that this game is pretty nice. And it is also
compatible with the falcon without a problem. You just have to
decompress the prg then pass it through stosfix, 8 mhz are better
because 16 mhz are unplayable, way too fast.

The Falcon has a single contiguous 14meg block of ST RAM. I believe TT RAM is
possible with an add-in board using the CPU direct socket.

To start with, don't EVER use wildcards (* and ?) when naming files or
folders. Then you won't have this problem in the future.

You need a command line interpreter such as Tomshell or command.tos, or
Maxifile, in order to rename that folder. TOS and/or Teradesk can't do it at
all. NOS might be able to; if you have it, you can try it (I think the best
bet is to "kill" the folder, and NOS does have a kill command).

Good luck.

Yes, and I suggest creating a switchbox to tie all three of the outputs
together when desired - Tweety Board sounds absolutely HORRIBLE on digitized
samples.

>The inside end is a 28(?)pin thing which appears to be designed to replace

No replacement; it piggybacks on your Yamaha sound chip (and tends to work
loose as well - you may want to tack-solder the leads after you're sure you
want to keep it).

4601. Using POV3GEM on Atari

Newsgroup: comp.sys.atari.st
Date: 1996-09-14 00:00:00 UTC
From: phil4@phil4.demon.co.uk
Message-ID: <842772176_OASIS_@phil4.demon.co.uk>
Source record: 137860

I downloaded POV3GEM (POV V3.00, with a TOS Windows Console, using TOS2GEM), for a friend.

We managed to waste several hours trying to get the thing to work, as the instructions provided with the program were very weighty (some 800K ish of docs), and didn't appear to be very program specific. Anyway... after I went home, the following day my friend managed to sus out how to get it to work, and typed up this _very_ short installation and setup guide.

The aim of this is to get POV3GEM working as quickly as possible, and in no way does it replace the manuals supplied with POV3GEM or other POV distributions. You should read the various text files included in the original distribution (especailly POVLEGAL.*) before use.

The stuff below needs saving as a file called POVRAY.INI and the *'d stuff deleting:

```
* This is a short doc on how to set up POV3. First extract
* the program and necessary include/scene files to a folder
* (I have used POVRAY3). Next install the povray.app as a
* GTP (GEM takes parameters) with the path the same as the
* "application". The documentation type should be .POV and
* the parameter "Full Path". Also have as "normal" boot status
* and I wouldn't bother to assign it a hot key.
* For the arguments try "povray +i". But first delete this header
* (every line preceded by a *) and rename to povray.ini and put
* in same directory as povray.app. povray.ini is a sample ini
* file which can be freely changed. It creates a couple of files
* to tell you what went wrong, what your preferences are and
* all the stats of the render. If using a Falcon I recommend 256
* colours as you will see the rendered image being created. At
* the moment the verbose option doesn't appear to work (in such
* that there is no TOS output)
* All you have to do is double click on a .POV file. Beware the
* parsing takes longer than POV2 so expect a 100 second wait before
* an image appears (this time is cut down when no include files
* are required). Try the atmos1.pov from the pov3demo\atmos folder
* for a quick start.
* ENJOY!

Hi,

PLEASE - I NEED A QUICK ANSWER - I NEED REALLY QUICKLY TO MAKE THIS
CARD RUNNING !! ...

I need very very quick help for an Ethernet card called RIBEL C90.

There is on it Jumpers :

J1 to J6 next to the BNC connector
J11 alone
J8 to J10 next to the VME port
J17 to J23 next to the memory

I want to make it running on TT030, in BNC ...

For the moment I have the driver for Ribel + !?
It always said that it don't find the card ...

So have you got a driver for it ?

Could you give me more informations about the jumpers because I have
no documentation of them !!

Please reply by Email ... !!

Thanks per advance for your help !!

With Best regards,
Hervï¿½

:>
:>

Has he tried the dumptos prg provided on the STonX homepages (both official and unofficial)?

By 'patching' do you mean the ROM is permanently altered? That this has no effect on normal ROM operation?

Apparently STonX is optimised for TOS 2.06 (which I don't have).

>Has this happened to anyone else had this? On Friday 13th? Not joking!

Are you now using Magic? If so, you'll need a new code!! The registration
code is TOS dependent. Thus if you change your TOS, you need a new code.
I had exactly this problem when I started using Magic4. I now have TWO
codes, one for TOS4.04 and one for Magic.

If not, then try entering the code again, and see what happens.

First: the authour has had hardware problem with his Atari, so or a While he
has not been able to use it. therefore he has not been able to answer any
e-mails, OR program anything on MG-FTP.

anyway, the good news is that he has no got his computer back, and he is
about to release a new beta to his beta-testers (much of the code has been
re-made and changed)

Hopefully we will se a nw BETTER version soon.

:>read high? Like 16 volts? The 5 volt output is normal.
:>
:>

Sure, the regulator circuit that brings the 16v down to a regulated 12v
has failed. Simply disconnect the regulator and replace with a 3 pin 12v
regulator IC* of, say, 3 amps capacity. That should handle the requirements
of the ST for 12v (my schematics aren't handy just now) and provide better
than stock regulation. Put a modest heat sink on the new regulator, and use
'acceptable wiring practices'. :)

This is great news! We'll be looking forward to it!

4612. Cracked Cubase - READ!

Newsgroup: comp.sys.atari.st
Date: 1996-09-14 00:00:00 UTC
From: Mark Gardiner <100550.3170@CompuServe.COM>
Message-ID: <960914134836_100550.3170_EHK92-2@CompuServe.COM>
Source record: 137871

I've sat back for the past 2 weeks and read all the commings and goings over the morality and legality of my request...

All objectors without exception clearly did not read or understand my original postings!

If anyone has ever used Cubase/Pro24 with dongles for a LONG period as I HAVE then they will know that when the connection gets a little weary, booting up becomes a hit and miss affair and very tiresome (around 2 mins a go when including Desktop ACCs). So you tend to *LEAVE* the dongle in the slot...

Now, many of us use our Sts for more than *ONE* purpose and maybe we are working in a WP or graphics prog and suddenly... Bombs appear.

When this happens it means there has been a system failure and you will have to reboot. On doing so, you *LOSE* *ALL* the data ie what you were working on - UNDERSTAND?

Also, sometimes this system failure coincides with a disk write - What do you think happens to your FAT then?

God, you are all up your own arses!

Anyway, still looking for this cracked copy anyone :-) ???

Mark.

4616. I need help with samples...

Newsgroup: comp.sys.atari.st
Date: 1996-09-14 00:00:00 UTC
From: dooley@infomatch.com
Message-ID: <51enkb$bhr@berlin.infomatch.com>
Source record: 137875

Hello.. I need some help converting .wav or .spl samples to .iff for use
with Sequencer One..

I read in an old ST Format that you could do it with SoundLab 2
I don't have 2 but I have ver. 1.1 that came on a STF cover disk and I
tried it with my version and tried to load it into Seq. One and it said
it could not read the sample..!
It said to load the .wav and click on HIGH BIT then click SAVE them Name
to .iff This was a no-go!

Any Suggestions..? Or does someone have SoundLab 2 that they could send me!

Also is it possible to send a straight .zip file through E-mail?
Or does it have to be encoded with ESSCode?

Thanks!
Johnny

4617. Cubase Audio and Logic Audio

Newsgroup: comp.sys.atari.st
Date: 1996-09-14 00:00:00 UTC
From: guitarra@afn.org
Message-ID: <51eq0k$io0@huron.eel.ufl.edu>
Source record: 137876

Hi to all: I have used Logic Audio a lot to produce the Master for a CD
I like Logic's sample edit windows and functions. also, it is possible to zoom into the wave to fine edit. Is this possible on Cubase Audio.

I have been able to see cubase audio, but could not get to zoom and enlarge the wave. Also the editing like fadeout was done only "offline" Is this the only way to manipulate the wave on Cubase.

Logic's functions look very much like Sound Tools and among them these are:

fade out and In
normalize
gain change
delete
cut
paste
merge
as well as Audio Time Machine.

I would appreciate any info on this. Thanks, Raymond

4618. Re: Speed up the Stacy

> other accelerator in the Stacy ?, I have one and I love it.

I tried once to speed up my STacy with an ICD AddSpeed. It did not work good. But, I think the AddSpeed was bad, because it would not work in a 520ST later.

If you do try to use the AddSpeed, have someone who is a GOOD TECH do it. It took me 16+ hours to get it installed. The biggest problem is with the power board inside the STacy. The AddSpeed raises the CPU up too far for the power board to sit on its connectors. You will need to add spacers on top of the connectors.

Good Luck!!!

Blah. My provider has disabled 'rz' because of some security hole. I have
to use FTP to manage my pages, and there doesn't seem to be an 'MPUT'
command... :P

> Does anyone know if this program is still being developed and if so when we

Seems there is a huge update of the entire STiK package coming Real Soon
Now. :) I'd expect MG-FTP is part of it...

I have a Megafile 20 controller placed in a PC case with a 30mb drive. I couldn't get AHDI5 to recognise the drive, so I had to chain an ICD drive to it and use the ICD 'basic' utils. I formatted it with a 3mb drive C:, and whatever was left as D: (2k sectors). Since I can't leave the ICD drive connected forever, I set it up to autoboot AHDI5. Is AHDI 'safe' to use with BGM partitons? How can I get the latest AHDI? All I can find is an update to 6.61 (?) from 6.0, and more copies of 5. Where is v6.0?

4622. TOS 4.92 boot from Hard Disc

Newsgroup: comp.sys.atari.st
Date: 1996-09-14 00:00:00 UTC
From: phil@goldings.demon.co.uk
Message-ID: <842788298_OASIS_@goldings.demon.co.uk>
Source record: 137881

I have got the TOSBOOTR archive from 42BBS which contains BOOT3.PRG, TOS.IMG, and CAUTO_M.PRG. This is supposed to enable one to auto boot TOS 4.92 from a hard disc. Has anyone managed to get this working? It does work the first time that I try it but then the next time I re-boot I end up with it stuck in a loop with it loading AHDI then loading the Tos image then going back to loading AHDI again.

Would my problem have anything to do with using SToop?

I have the earlier version which boots from floppy, but while this does work I do not use it because of the added time it takes to re-boot.

Thanks in advance for any help,

Phil

Falcon030, 4MB RAM, 127MB IDE, TOS 4.04, Blowup, SToop1.05, NVDI3.01.

>Does it work on Falcon?

Yes and No, it was not intended to work on the falcon, although if
anyone wants to unpack it and fix it then it will work, but with no
sound at all and should be in 8

There is to be a falcon version if feedback from this one is good
enough, i need a bigger and better sample, plus a couple of other
things to do,

So it will work, but not well as this version was not intended, this
is the ST version and as such will work on all tos version with no
fixing needed :))

I usually just load up Knife ST, find the sector the file or directory is in, then load that sector into memory and change the first character of the file/folder name to a sigma character (you'll have to look around in the sector to find the hex equivalent to type in), then save the sector to disk. In your case, change the "W" to a sigma. The sigma is the character that lets the system know that byte is available.

BTW, _don't_ copy or try to move it, you'll just make another folder you can't delete.

But Mike, you forget how two years before, Brodie out-and-out blew us off for support for
that same
show. He even had the whole shebang packaged up from the Atari show in Glendale and
couldn't be
bothered to get it to San Diego for one of the biggest computer shows on the West Coast!
That was
when I decided Atari sucked and not to expect anything from them, not even a loan of
equipment to
market their damned product in a _big_ way for the cost of shipping. (And hell, we even
offered to
stay late after the Glendale show and carry the stuff to San Diego _ourselves_.) They only
had to
pay to get it shipped back. Scum, that's all, scum.

One of the beta testers for the Spectre GCR had a Turbo 25 in his Stacy, I believe. Definitely at least an Adspeed. The only problem might be space limitation. Your best bet is probably to install the accelerator right into the motherboard (no socket).

I believe that what is meant by TT resolutions is TT low, TT medium and _maybe_ TT high, as TOS video modes (4, 5, and 6, IIRC). Gemulator has long had support for "extended" video modes on the PC (800X600, 1024X768, etc.). Magic, MagicMac, and MagicPC are all from the same company. I'm not sure how or why you would use Magic PC under Gemulator, if you have a quote, I'd be interested.

>I've tried to install Gluestik today with no luck.
>The driver is loaded but there seems no interaction between a Stik
>utility and the modem.

Hmm. You might try upgrading to v0.02b2, which I just released
recently, at <URL:http://www.cs.duke.edu/~dsb/files/gluestik-0.02b2.zoo>;
it has a couple of bug fixes which might be the cause of your problem
(thanks, BTW, to Bernd Ebert for smoking those bugs out for me). Beyond
that, it's hard to diagnose without more to go on.

>BTW I use a PPP connection. Can Gluestik be used with PPP?

Yep. GlueSTiK uses MintNET's underlying socket library, so it works
with anything MiNTnet works with.

From: bjr@edison.ebicom.net
Message-ID: <51fgbk$6ul@einstein.ebicom.net>
Source record: 137897

Okay, I've gone through my slew of old ST disks trying to get
a ram disk to install on my Falcon. None of them seem to work
with the Falcon...the few that do are unstable and cause other problems.
I even tried the excellent ram disk utilities that came with Mark
Williams C with no avial.

Anyone know where I can obtain a really good Ram Disk for the FAlcon...
Preferably something that can allocate as much memory as you wish as
I'd like to install a 4 to 8 meg ram drive on my 14 meg falcon.
It'd really be nice if there are provisions to back up images of
the ram disk that can be loaded back in as one quick image.

I have the sources for the MWC ram disk...but I know nothing about
coding so they do me no good. If this type of ram disk does not
exist for the Falcon, and someone would like to write one...I'll
be glad to send you the sources for rdy. Perhaps a few minor changes
would make it Falcon Compatible. (If this is not legal, forget I
mentioned it...but they did provide the sources so I'm assumeing it's
okay).

Thanks,
Brian

4643. atari-ibm data xfer

Newsgroup: comp.sys.atari.st
Date: 1996-09-14 00:00:00 UTC
From: Black Dog <blackdog@mail.netwalk.com>
Message-ID: <323B8D89.4141@mail.netwalk.com>
Source record: 137902

Hello, fellow Atarians. I am a longtime ST user but, very sad to say, had to convert to the IBM world to keep up with the latest chess database
software. My old (self-programmed) data base is on my ST, my fancy new software is on my IBM. My problem is, I would not like to have to rekey all this data to get it to the IBM domain. I know how to write files my IBM-world software can read; my problem is, how can I write to a disk in Atari-world and read this same disk in IBM-world?

Could someone please help me with this? I would be most grateful.

P.S. I suppose one solution would be to download the Atari Internet software, install it, logon with my Atari, mail myself a file, logoff my Atari, logon with my IBM, and read the file! But that seems a roundabout
method and anyhow, I'm afraid setting up an internet connection from my Atari would be a pain in a proverbial location.

P.P.S. I hate the IBM world and I wish I could have stayed with my trusty Atari!!

> 1040 STf (what does the f mean anyway ?)

1040=1024Kbytes, f=floppy drive (internal)
> SH204 - I assume this is a HDD, anyone know the size??
20 Megs, internal ACSI~SCSI, SCSI~RLL adaptors.
>Also, I got no cables, is a spceial one needed??
Yes, it's called a DMA cable.
Where to get an about how much??
Toad Computers or Best Electronics; how much? Probably too much! It's not
a very widely used format. >
> SM124 - looks like burnt in mono. What color monitors will work >?
Atari SC1224 (12"), SC1435 (14", stereo) SOME other brands work, but the
Ataris are easier to come by.
> All I wanna do is play deathsword and maybe screw around a bit.
You might not even need the hard drive then, as many games insist on being
cold booted from A:\

I must agree with you. It was very funny, and reminded me alot about
all the DIZZY games.. (Was the Dizzy character borrowed from the Dizzy games??)
It sure looked like that.. He jumped the same way as Dizzy.. And looked the same.
I have already played it for hours :-) And when i play a game for hours, it is good!!
:-)

4654. Need a program to display animated GIFs

Newsgroup: comp.sys.atari.st
Date: 1996-09-14 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <95889370_000003_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 137993

Is there a program out there that will display animated GIFs (ie animated not still)?

Neither Imagecopy4 or GemView display them animated, just static :(

I've got hold of a few GIFs from various web sites that look great in Internet Explorer3, and I'd like to see them on my Falcon!!

Also, does anyone know if CAB is likely to support these animations (shouldn't be too hard to code, so what about it?). I've just updated my web pages to include 'em and of course you only get the effect with a PC browser ATM :(

Cheers, Gary.

I asked Don Thomas some time ago if he or other Atari employees ever hear from Bob Brodie and he make it sound like a few had heard from Bob. But, it sounded like Bob had moved on away from Atari and wanted nothing to do with it was the impression I got.

I myself feel that perhaps Bob got upset at the desisions to abandon the Falcon and other Atari comptuters and move strickly into the Jaguar as a gamble which they lost on.

Bob was great at user group support and visited our user group a couple of times over the years. Don Thomas was also great at helping me when my user group and myself wanted to setup
my Jaguar at the San Diego Computer Expo two years ago. Don sent a bunch of flyers, a few posters of some of the games, decals, etc.

Too bad some of the folks who worked so hard at Atari over the years couldnt' take charge of
it and get it running, supporting it's systems better and the developers.

I have an Atari Stacey I'm selling for Salvage. It is one of the first ones that came off the Assembly Line without batteries. It's Switching Power Supply has been tested and works fine. The Stacey Switching Power Supply can Run in the U.S. or Europe on 110 or 220 Volt. These Power Supplies Regularly sell for $100 U.S. The Stacey without the Power Supply goes for $175 U.S. Dollars. Stacey with Power Supply goes for $250 U.S. The Power Supply won't be available for sale until after the Stacey is sold, with or without it. It's a 4 MB Stacey with Hard Drive. Please direct all Replies Through E-Mail to: bensmith@teleport.com or call Ben at (503)256-9974.

Ok, so I bought this setup at a thrift for next to nuthin.
1040 STf (what does the f mean anyway ?)
SH204 - I assume this is a HDD, anyone know the size ?? Also, I got no cables, is a spceial one needed ?? Where to get an about how much ??

SM124 - looks like burnt in mono. What color monitors will work >?

All I wanna do is play deathsword and maybe screw around a bit.

Thanks
KP

Dont you guys hav a private news group at sas? ;)

Anyhow, I had a problem with interramp.com, I had an average 5 peices of
mail a week from them.

After sending a note to there provider psi.com, with the traceroute, message
and headers, along with a polite note. I havnt heard from interramp for about
a week now <knock on wood> :).

interramp boasts a 'BULLET PROOF SITE DOMAIN & IP ADDRESS' for mass mailing.
If anyone is on interramps mass mail list, try postmaster@psi.com.

Regards

Hi there..!

I'm looking for some old games and s/w that I can't find anywhere but
would like to have!

They are: Games: SpeedBall 2
RaquetBall (Hindi pro guy.. I forget his name..hehe)
Any kinda pool games!
Any Sports games!

Utils/Apps: Sequencer One PLUS
Atari Works
BreakThru
DA's Vector
DA's Layout
DB Master One (I think this one is even PD) notsure)

Also looking for Docs for useing Sega Genesis Joypads on Atari!
Had the docs awhile ago but lost them in a Hard Drive CrAsH

Also if any one knows what games use the Anolog Joysticks.. Lemme
know!

Thanks..!
Johnny

The last version of Word Perfect, in 1991, could save in IBM WP 4.2 format,
I believe, which is readable by IBM 5.1.
I don't think it's a patch, but an upgrade, and you're probably smarter
finding someone who wants to sell the last version for $25 or so than try
to get an upgrade from Word Perfect.

Good luck

Tom

P.S. Incidentally, I have WP for the ATARI the version you're looking for
that I would sell for $25 U.S. plus shipping. Let me know if you're
interested. <g>

: MEGA ST - TOS 1.4 - Warp Nine - Terra Desk

You need something that tests the drive FAT (e.g. a disk defragmenter),
which will return something saying that it found invalid names, or something
like that, which will then be fixable. otherwise, you could
reformat/zero/repartition the drive which will remove it.

Message-ID: <bonnerj-1409962208150001@ppp2.rockefeller.edu>
Source record: 137915

I have an original 520ST. I haven't been able to get it to start up in a while (bombs march across the monitor, then it hangs).

I really have no use for it, but I'm wondering if there's any value in it or if anyone would like it for nostalgia or if someone would like to canabalize it.

I'd appreciate any comments (or offers to take it off my hands :-)).
Please send mail to bonnerj@nasw.org.

Thanks.

From: guitarra@afn.org
Message-ID: <51fudh$k42@huron.eel.ufl.edu>
Source record: 137916

Sorry, I can't help with your questions...
Where did you find Logic "Audio"...
I was told by Emagic that this does not exist, and will
not exist for the Falcon. I've very recently aquired
CuBase Audio and have not had a chance to use it yet (waiting on
a hard disk). I've used Notator for years, and really wanted Logic
Audio rather than CuBase (because I have Unitor and other C-Lab stuff).
I'd love to find out where I can get it if there's a beta or somehting
out there for Logic Audio. Thanks.

Brian

========Hi Briam: Logic Audio does exist!! I have used it now for two years!!

I also have a beta version that works great and has new features.
It looks very much like Sound Tools.
IF you have LOG3 box to run Logic MIDI you can also run Logic Audio.

Raymond

William Goehring <bgoehrin@capecod.net> writes:

>Help, just bought a mint Atari 1040st. I got some programs, but no
>boot? disk. Anyone able to help?

Bill,

There is no actual "boot disk" as there is for DOS machines. The ST Language disk was composed of some less-than-optimum languages (ST Basic and, in some instances, LOGO, a few Desk Accessories. They are not necessary for the operation of the computer. Try putting any 720K formatted floppy in the drive and then turning the computer on. On power-up, the ST looks at drive A to try to find a floppy with auto programs and accessories. If it finds a disk, even if it is blank, it goes through the boot process. If not, it tries again to access a floppy in drive A (it does this 10 times, I think).

There are lots of programs and accessories available on the 'net that are at least as good as what was on the Language Disk.

Good luck,

Joe Mirando @ STReport

You could try renaming your DESKTOP.INF file and rebooting. You should
get the default colors. Then you can cut and paste into your old .INF
file to get back your old desktop layout.

Assuming your Atari can read 720K disks, just use a preformatted 720K IBM
disk in your Atari computer and then pop it in the IBM.

Source record: 137927

Oscar Fowler wrote:

> I've got a couple of quick questions for the gurus out there:
> How big can a single hard drive partition be on a Falcon? How

On the Falcon a single partition can have up to 1 GByte. There are users that work with partitions of 2 GByte but this is a size that is not supported by the Falcon GEMDOS because it is outside the GEMDOS limits. Nevertheless this seems to work but I strongly recommend to keep the partition size below 1 GByte if you want your data to be secure.

> large an IDE/SCSI drive will a Falcon recognize?

TT and Falcon recognize drives of any size. There is no upper limit. Note that with SCSI drives > 1 GByte AHDI won't work because it can only access sectors below the 1 GByte limit. Other drivers don't have this problem.

4688. FS: U.S. C-Lab Mark-X/1040ST and more

Newsgroup: comp.sys.atari.st
Date: 1996-09-15 00:00:00 UTC
From: Michael Grove <mgrove@owens.ridgecrest.ca.us>
Message-ID: <323B6CB5.4870@owens.ridgecrest.ca.us>
Source record: 137928

Ok, here's the deal.

READ THESE TERMS.

1). All items are sold as is. No refunds, trades or exchanges will
be made, however none of it is trash. It all works. All prices
are firm. No additions or subtractions to Packages offered.
Don't bother responding with a counter offer, I won't reply.
NO HAGLEING.

2). Some items require soldering. Don't get in over your head.
Know what your getting. I will offer no assistance with the
installation, compatibility (software or hardware), or any
additional software or hardware you may need to utilize your
purchase.

3). You will pay for shipping and COD fees. Some
smaller items can be held until a money order is received
for payment. Items $70.00 and over will be insured for the
sale price, shipping and COD fees at your expense.
All COD's will be cash only, U.P.S. Ground.
Computers typically are $25.00 shipping. Smaller
items around $7.00. U.P.S. C.O.D. fee is about $7.00.
Use the moneyorder/U.S. stamp offer to save a few bucks.
Wait for email response for actual shipping fees to include
in money order.
Second and third day U.P.S. is more. Particle tracking only
available for next\second day via U.P.S.

4). First come first serve. You must state in your first
email that you wish to purchase the item. Be sincere.
If I feel your yanking my chain, the next person will get
the item. Items will not be held for a second response.
In your first email you must include your shipping address.
I will inform you when the item is shipped, and the amount
of the COD.
COD's will only be shipped in the U.S. Shipping outside
the U.S. considered. Email for details. If your request
is not answered promptly, it is likely the item is gone.
I will respond as soon as possible to all request. I will
not respond through newsgroup post for request. RidgeNET
is a fast server. Mails I send out will get to you within
seconds. If your on a slow system, sorry. Send a copy of
the message to yourself to ensure you included the
correct address.

5). Sorry for all the constraints, but the above provisions
ensure that I am able to sell the advertised items to
people that really want them. I do this from past experience.

Now that I've elimated the lookie -loos,

Item 1. C-Lab Falcon Mark X. 4mb Ram. No FPU/No hard disk.
Ran only to confirm condition when shipped from Toad.
1/4 inch audio in and out/stereo confirmed to work.
No keyboard (uses Mega/TT KB) no mouse. C-Lab software
(disk acc's), manual included.
This is a new machine. $685.00 plus S&H&COD fees.
(Will consider trade for X-lint STacy 4 W/ICD adspeed
installed or ST Book).

Item 2. 1040ST. Standard machine with no mods/hacks. TOS 1.02.
Falcon Keyboard. 1mb RAM. Color Computer Eyes Video
Digitizer, Video Key (Composite/RF/Audio out from RGB).
PC Ditto (software version) Digispec (software), Spectre
GCR, (Mac sys 6.x/msword/excel/+) mouse.
All manuals. No monitor/no hard disk. Everything works.
Good starter $200.00 plus S&H&COD fees.

Item 3. Gemulator (ISA card) with TOS 2.06 ROM's. V3.02 soft.
Works fine. Used. Box/manual. $70.00 plus S&H&COD fees.

Item 4. Falcon memory card. (Personal Computer Systems AB).
Card only accepts 4-4mb 30 pin simms. Simms not
included. Used . $20.00 plus S&H&COD fees.
(Will accept money order on this item).

Item 5. PC Ditto II hardware Dos emulator card. Software,manuals.
Will work with a 1040ST, but fits better in a MegaST. No STE.
XT compatible/CGA graphics-AT performance.
Complete. Used. $25.00 plus S&H&COD fees.
(Will accept money order on this item).

Item 6. Z-Time for 520ST (clock chip). Probably works with 1040ST
as well. Box, manuals and software included. Used?
$10.00 plus S&H&COD fees.
(Will accept money order or U.S. stamps for this item).

Item 7. EAB ST to PC 5 1/4 inch drive cable kit and software.
You assemble. Doc's and disk included. New.
$5.00 plus S&H&COD fees.
(Will accept money order or U.S.stamps for this item)

Item 8. Free Keys. Mount your ST(E)/Falcon keyboard in external
case. All hardware, no docs. New.
$25.00 plus S&H&COD fees.
(Will accept money order for this item).

Item 9. Monitor stand for Atari 1435 monitor. New.
$7.50 plus S&H&COD fees.

(Will accept money order or U.S.stamps for this item).

Item 10. Tweedy Board. ST/MegaST. Used.
$5.00 plus S&H&COD fees.
(Will accept money order or U.S.stamps for this item).

Books
Books are $3.00 each plus shipping. U.S Mail will deliver
Express mail for $3.00. U.P.S. will be about the same.
I will ship books for moneyorders only. All are good cond.
If you are using an ST/MegaST in a Church, School, Atari
user group or any other public/private organization that
supports three or more people, I will donate all books and
ship free of charge.
Shipping address must reflect organization.

Gentlemen;
I'm looking for information on this Computer System and for places to get possible upgrades and repair parts. I have good friends (believe it or not) that have an Atari interfaced with a summa sketch graphics tablet for an embroidery system. They currently are down due to a blown power suppy. Also they're looking for a spare sketch tablet.Its a Summa Sketch II 12x18. Any and all help in thease areas is greatly apreciated.
Thanks in advance

Oeps I've put the wrong date I see. It's 2-3 november 1996
(sat.-sunday)

Kind regards
Martin

Get dformat.lzh from the Diskutils directoru of atari.archive.umich.edu,
format a 80 track 9 sector normal disk! this will give you a 720K disk
compatible with the PC, copy the files to it and walk it over to the PC
and transfer them to it!

This begs the question from this user who is now almost (?) being seduced
by the price of 1 gig drives being so low:
What is the largest drive supported on the 1040STe or older 1040STf?
What is the largest size for a single partition?
Thanks

>Has anybody managed to successfully register there stik software through
>CyberSTrider? as I don't seem to get a single reply from him.. I've been waiting over
something like
>2 months now...

Joe asked me to post this reply for him after I brought this article
to his attention.

Nick.

Danny has been very busy moving house and changing jobs recently. You
should get a reply eventually.
InterActive has always supported CAB and we realised the need for a one
stop registration point for CAB/CAB.OVL and STiK so InterActive now
handles registrations for these three components as the 'Internet Access
Pack'.

We're aware this leaves the authors of the other internet components out
in the cold and maybe we can add support for other programs where
feasible.

In the meantime here's the latest InterActive docs:

```
==============================================================================
InterActive supported software scheme 12th September 1996
------------------------------------------------------------------------------
About the scheme
----------------
The supported Shareware scheme was started by Joe Connor in 1993 to
encourage authors to produce and support English language versions of
their software AND to encourage UK users to register 'foreign' software.
Recently the scheme was re-launched as InterActive. With currently over
1600 registrations the scheme has established the proven benefits of local
support, which include:

- Key to remove features reserved for registered users available
- Local telephone, post and Email support
- Free update service
- No hassle handling foreign currency
- Labelled Master disk and registration letter
- ST-Guide on-line hypertext help (some software)
- Other software (dependent on disk space)
```

Registration fees are set to cover the currency handling, stationary,
media and postage costs incurred in mailing out master disks and providing
support.
Although primarily a UK support scheme everyone is welcome to register via
InterActive as an alternative to registering directly with the author/s.

The currently supported software is:

Version Software Fee Status and description
---
v1.73e Kandinsky 16 [S] Vector art using GDOS/Speedo/NVDI3
v2.50e Kandinsky 2 30 [S] Upgrade from v1.73 costs 16 Sterling
v1.51e Two-in-One 13 [S] Archive manager, twin selector style
v4.8 GFA Flydials 13 [S] Enhanced GFA GEM routines [G]

===

How to register from inside the UK
---
1) Use the included ORDER_FM.TXT to select the required software
2) Make sure your name and address is included and *legible*!
3) Make cheques/POs payable to InterActive for the total amount
4) Send the completed order form and payment to InterActive

Additionally from outside the UK

- Add 1 to your order total to cover postage
- Make certain payment is *in Sterling* drawn on a *UK* bank address
The following methods are known to work:
-Bank draft/cheque
-Eurocheque
-International Post Office cheque payable *in Sterling*
-Cash! Sterling, Dollars and DMs are fine -but at your own risk!

Country specific information

Canada: Canadian Post Office money orders made out in *Sterling* are
perfect and inexpensive!
Australia: Please visit your Post Office and get a money order made out in
and NZ *Sterling*.
France: For some reason I'm getting a number of local cheques (i.e.
written in Sterling but drawn on a french bank address.
I can accept these but they cost 5 to negoiate so you must add
an extra 5 to your order total.
Europe: In general Post Office money orders or Eurocheques are the best
way to pay.
USA: What a nightmare! Can I suggest a day trip to a Canadian post
office? I've seen everything from Amex travellers cheques (add
5 to order total), local cheques (no can do), cash (fine -but
at your own risk). An International money order (add 5 to
order total) made out in Sterling drawn on a UK banking address
is currently the best solution.

Contact

Mail: 65 Mill Road, Colchester, Essex, CO4 5LJ, England
Email:
Internet: support@inactive.cix.co.uk
NeST: 90:100/304.0@nest.ftn
Telephone: UK+(0)1206 852602 Leave a message on the answerphone!

Update service

By post

To receive an update send a self addressed envelope including return
postage (or IRC) and an unlabelled double sided floppy disk. Please state
clearly:

1) The software you'd like updated
2) The version you're currently using

How long will I have to wait?

Due to the number of people taking advantage of the service and my other
commitments as editor of Atari Computing I can't always reply as quickly
as I'd like to. Often I'm waiting for a new version or simply too busy
earning a living so please be patient!

If you have Internet access

Visit the InterActive websites which include news and gossip about the
latest products with links to other Atari related sites and (any day now)
downloads of all the latest versions.

URL: http://www.cix.co.uk/~inactive/
URL: http://www.toad.net/~interact/

If you have a modem but no ftp access

You can always obtain the latest English language releases from 42BBS:

SysOp: Colin Fisher-McAllum
Telephone: UK+(0)1256 895106
System: 24 hour/28.8K modem/Falcon/8N1

Other Bulletin boards and ftp sites are allowed to carry the on-line
archives but because minor updates to the English language version are
sometimes made without changing the version number hensa and 42BBS are the
places to go to ensure you have the very latest versions!

Regards

Joe Connor

you don't need a boot disk! the OS (TOS 1.XX) is on ROM chips. The original disk that came with the machine had a couple of crap languages and a couple of utilities that have been superseded by better one long ago! The new ones can be had from most Atari ftp sites world wide.

As far as I know, with Tos 1.4, and probably 1.61 ? , it's 32 megs.

If you use the ICD Link and a scsi h/d as I do, the first partition
is 32 megs and the remaining available drive letters are limited to
512 megs.

That's as far as I know.
Hope that helps,
<Glenn>

Well, Netscape itself will not run on a Linux68k machine. But if you can network with an Intel-Linux box (or any other OS that Netscape will* run on) you can at least have it display on your Atari...

BR> I like the idea of the EZ135 Syquest drive...or the IOmega ZIP
BR> drive to begin with. Anyone tried these with CAF? Are they
BR> fast enough?

I use one Conner CFP1060S and one Conner CFP2105S for my audio recordings and they both do good work (since Seagate has bought Conner, these drives are available under the Seagate brand now).
I've tested my Zip-drive and at 48kHz, it manages to play 6 audio tracks at the same time (someone told me that it managed 8 tracks at 44.1kHz, but I haven't had the time to test yet). The Jaz drive (1GB removable) is faster than the Zip, so it should do nicely with all 8 tracks (haven't had the chance to test it yet, but I'll probably buy one within a month or two). Since the EZ135 is faster than the Zip, it should manage 8 tracks too, but I haven't tested it.
The EZ135 isn't manufactured anymore, but there will come another Syquest with 230MB if I remember correctly and my guess is that it should work.
To get a faster transfer rate than the original, buy HDDriver or SCSI-tools and get rid of the old, slow AHDI.

Best regards,

Claes

Now put the Falcon in ST high mode and 640X480X16 color modes to give us an accurate comparison. The numbers here are probably low because the Falcon has to work harder to put out all that video as compared to a TT in ST high. You'll probably get a Graphics number closer to 1000% and maybe a 700% average. Now _that's_ smokin'!

Well, after scouring the hick town I live in I was unable to find the Oct. issue of Wired anywhere...(you know, the one with the neat Atari article?) Yeah, yeah, and before the jokes start we do have running water, electricity, and even cable (although our Saturday morning cartoons do come in on Sunday) Anyways, here is the deal: would some fellow Atarian P-L-E-A-S-E send me a copy of the Oct. issue of Wired? I'll pay for the cost of the magazine, all shipping charges, plus $5 pure profit for you, just for the favor...Please send it COD-CASH (UPS or USPS) to:

Ronald J. Hall
1938 Spurlock Road
Prestonsburg, KY 41653
Phone 1-606-886-9024 or
my BBS 1-606-886-9014...

Mucho thanks in advance! :)

Easy questions to answer - a single hard disk partition on a Falcon can be 1 gigabyte, and the maximum size of IDE or SCSI hard drive that a Falcon can/will recognize is 30 gigabytes (yes, you can have 30 partitions on a Falcon, if you use HDDriver - C to Z (although MagiC and MiNT use Drive U, which removes one leaving you with one less drive partition) and 1-6). Of course, you may be asking, what about the 540 meg limit on IDE? Apparently, that is only a limit on PCs. (I had occasion to use someone's 3.1 gig 2.5" EIDE drive with my Falcon.) Hope this answers your questions. (I would say a maximum of 29 partitions, just to be safe though.)

[Posting for a friend. I'm not a musician and do not understand what I'm talking about here.]

Friend has the original [more than three years old] release of Notator (music on the Atari). His hard disk died so he moved his backup notator data files over to a new system that had a new release of Notator [now more object oriented]. The files converted OK except they lost 'tempo'. Anyone know how to fix this? He says he's read the manual but it didn't help and he's reluctant to call tech support in Germany. ;-)

Get the pppd-2.2.0e package, as it seems to be the most complete and best organized. Be warned; I'm having trouble getting it to work with bash, and I've been told that only tcsh will run scripts reliably under MintOS (which is what I'm using). It's set up to output a log in /etc/ppp, so you can see what's going wrong...

FWIW, I had no problems with pppd-2.1.2 before I toasted my MiniFS partition.

> Atari would be a pain in a proverbial location.

If you whant to go on using the Atari as well, you should consider this, because you will more often get to the situation to transfere Files. You definately should not use mail transfere for this purpous. A better way is ftp (file transfer Protocoll), and the best way should be NFS (Network file System). For the last one you need MiNT and MiNTNet. the first one is also possible with STIK.

Just consider to use the huge harddisk of your PC (Iguess so, because PCs need huge Harddisks) for the Atari as well. This does the file transfere in the background and is not visible to the user. It feels like a slower harddisk in the Atari.

Heh, took me about an hour to beat it. :) It does clash with GDOS though...
When it begins to load, I get around 50 "GDOS Invalid device" dialogs in a
row, (which are invisible...) Then the title screen shows up, and I get a
whole ton more. Then the 'puter crashes and reboots... (I'm using AMCGDOS)

Oscar Fowler wrote this to All about How big can a partition be?:
OF> I've got a couple of quick questions for the gurus out
OF> there: How big can a single hard drive partition be on a
OF> Falcon? How large an IDE/SCSI drive will a Falcon
OF> recognize?

Hi Oscar,
The maximum partition size is 1GB. However, you should also think of the sector size. With large partitions, you also get large sector sizes. With a 1GB partition, you'll get 16kB sectors, which means that even a 1kB file will use 16kB of HD-space...
The HD size of SCSI-HD's isn't limited to my knowledge (I use one 2.1GB and one 1GB), but TOS only recognizes HD's up to P:, which means 14 partitions of a maximum of 1GB each - that's some space to use up...
On the IDE side, it's another story. According to some info I've had, it's limited to 1GB HD's. However, if I use HDDriver, I can use my Quantum Fireball 1280MB EIDE-disk (if I try the same disk with SCSI-tools, it marks everything above 1GB as bad sectors).
The best harddisk driver software is HDDriver and SCSI-tools.
You should avoid the slow, ancient AHDI/HDX.

Best regards,

Claes

It's not on a PC either, I do embedded systems work on a proprietry
OS, so there's no piracy at all - everyone who owns our system has
the latest version of the software as we do wide-area broadcast
updates using the existing broadcast video network, so everyone
always gets updates (both to the OS and the software) as soon
as we release them, at no cost. So, no need to pirate.....

Craig.

Terrible idea - that won't free up the space the file uses (the FAT
entries will still exist). Use Z'Org to fix it.....

Craig.

>not for the moment. There are still people using the oldest ST's (from -85 if I
>remember correctly). Tell me which PC's from -85 that are really usable
>today... Or if you can find all spare parts for those.

10 year old parts are simply not needed. While the ST had a certain
advantage a decade ago, that is ancient history now. Daydreaming about
'the glory days' really does not get one anywhere. The availablity of
new PC parts quite makes up for the problems that would be associated
with maintaining a 10 year old PC in it's original condition.

>For the computers that are manufactured today, there are no problems getting
>spare parts - whether it's a Falcon or a PC.

...and that is such a vast number...

I've already admitted that the Falcon has a certain value in certain,
relatively small, niche markets. Beyond that, Atari's loose ground
day by day (and have been doing so for YEARS).

>software on the PC - you have to take that into concideration too (that is - if
>you don't get pirate copies of everything).

No you do not. With the exception of a few notable exceptions, software
can be very much cheaper on a PC. There is a much wider market with
much better price competition, competition in general as well as a
rather nice secondary market. ST users that are accustomed to 'seconds'
would likely find 'used' markets quite acceptable. We can use the 'rules'
to our advantage.

>
> J> Then, there is that daunting task of
> J> finding a Falcon (mail order & overseas mail order don't count)

>standard VGA setting in Windows still is 16 colors...

One of the few strong points of the PC was the relative
ease in which one could expand this. The capacity was there
and the upgrades were both numerous and available. Once one's
needs expand beyond the _bargain basement_ stage, options
were are very limited with the Atari's. _Power without the
Price_ becomes a mirage real fast.

> J> Furthermore, ragging on the Amiga does not do squat for your

>
>Simply compairing with the competition at the time, since that's what the jerk
>complained about. Actually he made the mistake of compairing old ST's with
>modern PC's, which isn't relevant.

Amiga was doing BETTER at the time. It apparently put more into
subsequent development, had better support for higher resolutions,
expansion buses & better CPU's.

Since the ST is the last Atari to be produced in significant numbers,
and the only one that is/was price competitive with any other current
platform, it is quite a relevant comparison.

>
> J> Furthermore, the Amiga was not limited to the 500+. There was

>
>What's vapor about the Falcon, Hades and Medusa?

All but the C-Lab Falcon don't appear to be available in the US
unless one is willing to be one's own importer. This is a very
untenable position. Mail order out of state is enough of a
dubious proposition.

>They are products that are available this instant.
>Stop talking about things you are so obviously ignorant about or you'll look as

This guy isn't going to get any help from anyone until he chills out a
bit and ditches the bad language and abuse.

chriswil@southern.co.nz (Chris Wilkinson) mumbled indistinctly:

>The subject says it all! I am angry because of a problem with my hard
>drive caused by stupid fucking software that is too fucking poorly
>archived to be useful to all but the most ardent anorak wearer. I am

I don't wear an anorak.

>I think it is about time these STUPID and OBSTINATE, PIG-HEADED people who
>compile these archives start using some DECENT archive protocol that we
>know works well on the Atari platform, instead of giving us gzipped
>frigging tar files!! Something like STZip or LZH format would be nice
>dont you think???

Abusing the people who put together the archive and wrote the software
isn't going to get you anywhere. Get a grip - you've made a mistake
with unfortunate results, but I'm afraid blaming it on the folks who
put the distribution together is not helping anyone. It is, I'm sorry
to say, your own fault.

As tar is quite capable of treating a drive as a tape, I suspect that
you gave missed the -xvf switch, with the result that your
F drive was treated as the target device to archive onto (and
resulting in the zero'd FAT).

<lot's of bad language deleted>

>Your help will be appreciated...

Yeah, right. I'll be very surprised if Kay even bothers to reply to
this - but he's a real nice guy, so maybe he will.

Craig.

4739. Is this a TT 19 inch monitor??

Newsgroup: comp.sys.atari.st

Hi kellis@primenet.com, on 11 Sep 96 you wrote:

k> Is it possible to achieve a 57600 connection on a megast not
k> modified?

No. You will need the RSVE board or the DIY "4040" mod.

I have a 14k modem. I can do it with a falcon.
k> Both computer have hsmodem as patch.
k> the 57600 will be only virtual as compression, not as a real speed
k> connection I know.

Yup. 19200 is the best you can get. 38400 and 57600 are quite possible with
the mod but higher speeds need a processor operating above 8Mhz.

f> as part of bytes used in that folder. Suggestions?

The directory entry fr CS04 is obviously corrupt.

Move all other files in the folder to somewhere safe and then delete the
folder entry. This should clear all the file entries.

The secret is to format the transfer-floppy on the ST - it should then be
readable on the PC.

If you have a lot to transfer you would be better using Ghostlink when you
can transfer the lot at 19200bps over the serial ports.

b> Thanks in advance

You shouldn't need one! Only the very early ST520 had TOS on floppy. Stick
any old disk in the drive. This will stop ROM TOS from looking for a boot
disc A: to P: before it starts up.

: it was $100. It is difficult for people to justify paying 2-3 times as
: much for a program than they paid for their computers. The Atari market
: may be small, and not all Atari users are musicians - I would agree with
: that; but what about the Atari users that are musicians but haven't been
: able to purchase a good sequencer because they are all priced for
: professionals? A market is what you make it, and pricing software in the
: $500 range certainly guarantees a small market.

What about Cubase Lite? That sells for $99. Yes, it's not as powerful, but
there is an upgrade path so that when you outgrow the Lite version, you can
move up to the Score version for a fee. (Don't know how much)

I think as long as the price of the professional big-name music software on
the other platforms stays high, it will remain high for us Atari users too.

-Phil

P.S. To be nitpicky, Cubase Score costs about $350, not $500. <grin>

4749. I am angry!!

Newsgroup: comp.sys.atari.st
Date: 1996-09-16 00:00:00 UTC
From: chriswil@southern.co.nz
Message-ID: <51its2$dgo@orm.southern.co.nz>
Source record: 137817

The subject says it all! I am angry because of a problem with my hard drive caused by stupid fucking software that is too fucking poorly archived to be useful to all but the most ardent anorak wearer. I am trying to install MiNTnet 0.80 under MiNT 1.12, and upon trying to untar the net-080.tar file on my Falcon, after I had 'gunzip'ped the whole *.tar.gz thing on my ISP, I found that ALL applications on the target partition were no longer able to run (TOS reports 'File Not found' and MagiC reports either same or 'Seek error' or 'Application is not executable'). I now have found that the entire FAT1 for F:\ (target drive) had been zeroed, and that FAT2 is a freaking mess. The drive still shows all files in the right folders, and animations still run correctly so I assume the sector allocation is still OK for all the files on F:\. I am unable to run ANY apps off this drive however! The net-080 directory that tar.ttp tried to create is a fucking fucked-up abortion however. It is full of symbolic links according to MagiC (I -=DID=- specify NO SYMLINKS to tar.ttp when I tried to extract net-080.tar), and files of upto 1.3 GB size (damn fucking unusual since I only have a 340 MB drive!!), all of which have STUPID filenames. The header for the .tar file appears to have been written over the FAT table looking at some of the names in the new net-080 folder.

I think it is about time these STUPID and OBSTINATE, PIG-HEADED people who compile these archives start using some DECENT archive protocol that we know works well on the Atari platform, instead of giving us gzipped frigging tar files!! Something like STZip or LZH format would be nice dont you think???

If anyone has ANY idea about what can be done to sort the above abortion, then please email me. I don't want to re-install all the commercial software and re-ftp all the PD and shareware stuff again so any help would be appreciated. Remember that I cannot use ANY utilities right now because they are all on the crook drive and moving them to a safe partition still doesn't make them wanna run (I don't want to copy crook FAT info into clean FAT's and risk corrupting them anyway). I have numerous projects on the go (a POV3 compile, rendered frames for APEX media animations, MiNTnet (grrr!) etc...). If I have to restart from scratch I will be extremely FUCKED OFF!!

Your help will be appreciated...

Chris W.

Wow! I never knew they put the STf into one of those systems. I have only seen the Mega STe version. Must be dog slow on an 8 MHz ST! They can get a new power supply, a hardware accelerator (if they could use a little more oomph), and maybe a Summa Sketch from Brad Kota at Best Electronics. Just call directory assistance for San Jose, CA. (I can't seem to find the number).

It is available and it is a really hot piece of Hardware. I use one with
a mach64 with 2mb DRAM and it is really fast! (But you need a hardware-
accelerator to use it, otherwise a normal 8mhz 68000 is probably not fast
enough to handle the data.)

guitarra wrote this to All about Cubase Audio and Logic Audio:
g> Hi to all: I have used Logic Audio a lot to produce the Master
g> for a CD I like Logic's sample edit windows and functions. also,
g> it is possible to zoom into the wave to fine edit. Is this
g> possible on Cubase Audio.

Hi there,
You can't zoom in to sample-precise editing in Cubase Audio, but how often do you really need it?
If you do have need for a more accurate editing, you can get WaveMaster from SoundPool, which works as an accessory you can use without exiting Cubase. In WaveMaster you'll find loads of functions that are better than the more primitive ones in Cubase Audio's audio-editor.

g>
g> I have been able to see cubase audio, but could not get to
g> zoom and enlarge the wave. Also the editing like fadeout was
g> done only "offline" Is this the only way to manipulate the wave
g> on Cubase.

In the audio-editor, you can make volume changes for the track by selecting that the volume should be shown (I don't remember what it's called, but consult the manual's chapter on the audio editor and you'll find it).
Otherwise, I believe you can make more accurate fade ins/outs if you use WaveMaster...

g> Logic's functions look very much like Sound Tools and among
g> them these are:
g>
g> fade out and In
g> normalize
g> gain change
g> delete
g> cut
g> paste
g> merge

I believe these are all available in WaveMaster.

g> as well as Audio Time Machine.

I have no idea what this is...

> What about rez sizes it is capable of.. and also color pallettes?

The TT does VGA. You can not connect an SM or SC monitor - you have to
buy a VGA monitor.

There are six native resolutions available on the TT.

The resolutions available are:
ST Low : 320x200x16
ST Med : 640x200x4
ST High: 640x400x2
TT Low: 320x480x256
TT Med: 640x480x16

All of the above can be displayed on a VGA screen.

Only the "TT High" rez (1280x960x2) can be displayed on the TTM195.

Source record: 137831

HI ! About TOS 4.92. I have to explain what I understood of all about
it.
No bootable version from harddrive is available yet.
Only from floppy that should contains the hard disk driver and CAUTOm.
The author says (in french), that he didn't understand yet few things
about the TOS 4.92. Like for instance:
- Why the new TOS doesn't want to go at the boot sector on the hard
drive when TOS 4.04 does it.
-How does a reset work when the TOS is installed in RAM.
-How to patch the TOS.IMG file to be able to not overwrite the Hard
drive routines previously loaded from the TOS. Thus we could access
the hard drive without reloading the hard disk driver.

Here are the main problems why the author can not make the TOS 4.92
loadable from the Hdrive. If anyone knows how to resolve any of these
problems, it would be great to Email the author or me, I'll try to get
the author address and then translate the information in french if
both of you can not communicate. (language barrier of course).

Now, the second TOS 4.92 archive also available at cnam is still
not bootable from hard drive. But the TOS.IMG in this archive is
already patched to avoid the loading process of auto and acc everytime
you change the resolution or reboot. Nothing more.

Well, now , why bother with TOS 4.92 (made by atari BTW).
Actually, I will just say what I saw, and not from a programmer side.
It is basically the same, except that you can run the accs on the fly,
the iconification is available, the cache is switchable from the menu,
the resolution panel is different, they ask you directly STlow, STmid,
SThigh, TTlow, TTmid, and TThigh (grayed out).
The compatibility seems to be the same as well as the general speed.
I just say "seems" to be the same.
Well, that's all what I have to say for now.
Hope it will bring you some lights about the 4.92. Bye.

Also helps to forward to postmasters of machines which pass the message on as witnessed by the Received: headers.

If the spammer gives an http address, there are dozens of nasty thing one can do to it using good ol' TCP protocols, CGI and HTTPD requests.

If an email address is given, there are interesting experiments which
one can conduct using SMTP and ESMTP. Not that I'd advocate such
practices. Some may be considered illegal.

No, it will not. However, STiK 1.11 or 1.12 will probably support more
than one nameserver.

You possibly accidentally deleted the *.INF file ? You use a different OS
now (Upgrade from, for instance, TOS 1.02 to TOS 1.04, or even to MagiC,
or something else) ? This is because the CoNnect key is OS dependant.

Cheers Peter

Beware the STe (like mine) where the 68000 is soldered directly to the motherboard. Had to find a 68-pin PLCC socket and a good technician on short notice once I had my 1040 (TOS 1.62) apart on the bench.

That's at least partly your own fault, Mark - you neglected to mention that
you had /bought/ Cubase already in your first post.

>If anyone has ever used Cubase/Pro24 with dongles for a LONG period as
>I HAVE then they will know that when the connection gets a little weary,
>booting up becomes a hit and miss affair and very tiresome...

Suggestion: (Either do this yourself, or if you don't feel competent, get a
geek buddy to do it) Open up both the dongle, and the ST. Find a
comfortable spot for the dongle /inside/ the computer. Using ribbon cable,
solder the proper leads from the dongle to the back of the cartridge port (you
could put in a switch on the +5v lead(s) if you want to be able to disable to
dongle).

This makes the dongle unremovable, but it also makes it impossible to
accidentally remove it by jostling. If the machine is used primarly as a
music machine, that should be just what you need.

4771. HD Problem

Newsgroup: comp.sys.atari.st
Date: 1996-09-16 00:00:00 UTC
From: g.schulze.icking-konert@kfa-juelich.de
Message-ID: <g.schulze.icking-konert-1609961650150001@igv089.igv.kfa-juelich.de>
Source record: 137839

Hi folks,

It's about 3 years since I last worked with an Atari ST but last weekend I had to install one for my brother. Well - er - that's what I wanted to do...

Beeing such a smartass I had the idea of simply copying the content of an fully functional Protar 40 MB HD to the "new" Atari SH204. About the second thing I did to hook them both up the same time was overwriting the bootsector of the SH204 with the Protar bootloader. Needless to say that it will not boot... :-(

Can anybody here give me a clue where I an get the driver for a SH204 on the internet. Maybe somebody can even mail it to me?
Pleeeaaaaazzzzeeeee.... ;-)
I've got a Mac at work, running Eudora so anything (Binhex, UU, ...) should work.

Oh yes, almost forgot: I very rarely have got the time to read newsgroups. So I'd much rather prefer a p-mail to:

G.Schulze_Icking-Konert@kfa-juelich.de

Thanks in advance! Georg Icking-Konert

>What is the largest drive supported on the 1040STe or older 1040STf?
>What is the largest size for a single partition?

There is no physical limit on drive size. AHDI is unsuitable for drives over 1 gig, so use a different driver. The drive must be partitioned, and there is a limit under most drivers of 14 /active/ partitions (I think) - you can have as many inactive partitions as you like. ICD Pro has the ICD Desktop program which allows you to activate/inactivate partitions as needed.

Now, the limitation on individual partition size is how much RAM you want to dedicate to the driver, and how much space are you prepared to waste on small files. Using larger partitions requires larger logical sector sizes; I use partitions of 512 megs and smaller so my logical sector size is 8k. Thus, if you're willing to go with, say, 32k logical sectors, you could have a single partition of at least 2 gigs. If you use caching and write verify, though, you're going to either cache very few sectors, or use a lot of RAM. My normal cache and buffer total is about 560k, which is quite a bit, but my system response is pretty fast because of it.

Well, if you can go on the web via lynx or a graphical browser you
still can go to my homepage. http://www.primenet.com/~kellis/ at the
end of it there is a zip file archive called UTIL.ZIP.
This file has the most common tools for your atari. (foldrxxx
included) . And before downloading it, you still can read a very
complete readme file to be sure that you want the zip file.
Otherwise you can download foldrxxx.prg almost from everywhere on the
net. Try Cnam first. ftp ftp.cnam.fr login anonymous then your email
address. Then Pub/Atari/ Maybe utilities, tosfixes or I don't know
Bye.

"F" IS for "floppy" - it has an internal floppy drive.

>SH204 - I assume this is a HDD, anyone know the size ?? Also, I got no
>cables, is a spceial one needed ?? Where to get an about how much ??

It's 20 megs, and you need a 19-pin shielded cable - I understand it's the
same as a Mac monitor cable (I recently sold my spare cable).

>SM124 - looks like burnt in mono. What color monitors will work >?

Atari SC1224, ther ewas a 14-inch the exact model number of which escapes me
ATM, NEC 3D, NEC MultiSync II, and Toad has mentioned a couple of other
monitors that work - I remember a Princeton for one. You could send email to
info@toad.net to get current details, or call Ram Turbo in Portland, OR and
tell them you want a NEC 3D or NEC MS II if chipping costs aren't prohibitive.

>All I wanna do is play deathsword and maybe screw around a bit.

Then you want a color monitor. For just games, I'd recommend a modulator and
a TV set. Toad will have a suitable external modulator, I'm sure.

4777. "bogus" news article problem resolved

Newsgroup: comp.sys.atari.st
Date: 1996-09-16 00:00:00 UTC
From: *RichardX_Tietjens@ccm.jf.intel.com*
Message-ID: <51k1dt$f55@ornews.intel.com>
Source record: 137845

Phantomm posted a message here a few days ago about a problem with a particular message causing Oasis to crash while unbatching, which in turn caused the loss of a bunch of news. I had a similar problem this weekened, and came up with the solution:

(1) Get the article number of the bogus article. Write it down.

(2) Go into your SPOOL/NEWS folder and delete the HISTORY file. Create a new one that contains ONLY the message ID of the bogus article (should look something like:
<0897f453094092.4512@bogus.message.com>
and the line must end with the usual cr/lf combo).

(3) Pull your NNTP.DAT File into a text editor and change the date back a couple of days (or only a couple of hours if it hasn't been long since your last news run).

(4) Get news. NOS will "see" that you have already read the bogus article, and won't pull it down again, but it will get all other articles since whatever date you have in your NNTP.DAT

This particular fix cost me a lot of time - I had a BATCH.TXT file that was over 12 megs in size by the time I solved it.

Posted and mailed.

Source record: 137848

You shouldn't have to much trouble transferring files to the IBM but it does depend which TOS you have on your Atari. From TOS 1.6 a disk formatted on the Atari should be ok to read on the IBM. If your TOS is before 1.6 then provided you format a double density disk on the IBM you should be able to write to it on the Atari. Check the DOS manual for the switches needed on the format command to achieve this as IBM tends to default to HD format.

Hope you manage to transfer your files ok.

David James

No, with TOS 1.04 larger partitions are possible.

>If you use the ICD Link and a scsi h/d as I do, the first partition
>is 32 megs and the remaining available drive letters are limited to
>512 megs.

AHDI compatible drivers (HuSHI, CBHD, HDDRIVER and AHDI itself, of course)
have no restriction concerning the size of the first partition. The first
partition can be larger than 32 MByte with these drivers. The maximum
partition size not only depends on the driver but on the operating system.

AtariPhile three is now out. We released it at the weekend. The WWW site has
also been updated.

I've now got Oasis 2 working with news so hopefully I'll be able to stick
around.

Yeah, as if that would have really made a difference.
The Feeding Frenzy would still have begun.

Check out alt.hacker. I've linked to sites from there with
cracks for Cubase/PC. Perhaps those same blokes will be able
to point you to an Atari version of the crack.

(* by crack it is meant a 3rd party program that patches other software
to disable it's software protection features)

Hi Abel!

AP>the doc is german :-(

You know why? 'cause it's 'Knarf's /German/ Mint Distribution'...

But, I agree with you: It should be available in english too. I bet it's much easier to install then the TAF-kit. Installing the KGMD took me about half an hour: half the time for the user-inputs (install-path, hostname, username, passwords etc.) and the other half for the system (extracting archives, copying, etc.). I nearly could't believe it... :-)

Michael

4791. ATARI ST EMULATOR FOR PC I DO THE TEST ! FRENCH ONLY !

un jour je me suis dit ce serait sympa de trouver un emulateur st pour pc
et oh!! surprise j'en ai trouve 3
-gemulator 96,tos2win et magicpc tous ces softs en version de demo bien
entendu.
-super je vais pouvoir ressortir mes anciennes disquettes de mes boites
poussiereuses pour les stocker sur le dur de mon p.c. etc....
mais ma deception fut grande et pour cause ! a peine 10% de mes softs
testes
ne fonctionnent tout emulateurs confondus !!! (que faire)
alors je me suis posee quelques questions ou j'aimerais trouver de l'aide
s.v.p.

1) est ce que le fait de rajoutee la carte contenant le G.E.M. influe sur
la compatibilite des softs si oui de combien de %

2) quel est le meilleur de ces 3 emulateurs !!??

3) et derniere question : peut t'on trouver ces emulateurs en france avec
la carte
et si oui ou !??

je dois vous avouez que j'avais fortement l'intention de me procurer un de
ses emulateurs en version complete + carte mais vu le taux de
compatibilite des versions de demo cela m'a fortement refroidit !!!

DERNIEREMENT GRACE A TOUTES VOS REPONSES A MES QUESTIONS
G DONC FAIT MA PETITE ENQUETE ALORS G APPELLE LA SOCIETE
COMPOSCAN QUI COMMERCIALISE GEMULATOR EN FRANCE !
ET OH ! SURPRISE ! G APPRIS QUE LES DISQUETTES ST FORMATEES
EN 10 SECTEURS PAR PISTES N'ETAIT PAS SUPPORTE PAR GEMULATOR
ET DE PLUS QU'IL N'AVAIT PAS L'INTENTION DE CORRIGER CE PROBLEME !
AIE AIE AIE ! QUAND ON PENSE QUE 80 % DES D7 ST SONT SOUS CE FORMAT ! (JE
PARLE DES JEUX TELS QUE DUNGEON MASTER PAR EX:)
BREF SI VOUS CONNAISSEZ UNE SOLUTION A CET EPINEUX PROBLEME
CONTACTEZ MOI MERCI !

Thank you! Finally (though inadvertantly) someone pointed out my problem getting vmlinux to extract. I have to agree with the previous poster, though, in that TAR is a pain in the ass because it is just different enough from TOS archivers to let you really screw something up. But of course, it's a Unix app. Grr.

At least I didn't lose any data. Just couldn't extract.

Dan

In that case, I would agree with the person who said that Knife could also be used to just rename the file/folder to get rid of the wildcards, then delete from the desktop.

Dan

Thanks for the tip, Craig. Now I know why I had FAT inconsistancies!

The kernal isn't a tar file. It's just a gzipped file.
There is a tar file with a similar name which is the source for
compiling
the kernal, but you don't need that just yet.

Biggest problem I can see with tar anf gzip is that there is no graphical shell available that works under single TOS (as often as I use MT, I wouldn't know if there's one there or not). Since I use ZIP by preference, and always with the shell except when embedding it in an app I'm writing, and keep all the necessary commands for arc, arj, and 2 different lharcs in my shell, I forget the commands for tar and gzip between uses. Let's see, I used 'em last in... March? Say, I bet 2in1 shell would work with them. Anyone know for sure?

FWIW - that was part of my job in the Army: Site Security Officer, charged with preventing copyright infringement within my battalion (the offices - the Army doesn't meddle with personal lives as long as those lives don't interfere with performance of duty). As far as I recall, we never actually charged anyone, but I had to delete incredible volumes of pirated files from PC hard drives on a regular basis.

I guess that makes me a Copyright Fascist<tm>.

The latest versions use two processes - are both loaded? Most STiK applications report the Internet routines currently in use either on boot or in the "about" menu.

>BTW I use a PPP connection. Can Gluestik be used with PPP?

Most certainly can, but most apps need to look at the STiK DEFAULT.CFG file for various parameters.

Not thought of losing that sig. yet, I see.

It doesn't NEED software to support it. It simply routes your three sound channels out to three separate RCA jacks, so that they can be fed to an external sound system. It sounds great with any game or other program using computer sound effects, but as someone else pointed out, it sounds terrible with digitized samples.

Source record: 137721

Hey, I have someone I sold my ST to about two years ago who wants to give it to someone in Brazil to use as an Internet machine. She's told there is an internet provider there.

She asked me about software. Where could I find interenet applications for it? (just a dialer, email, and a web browser would be good).

Can anyone help? Obviously, I could get the software by email, but it would need to be in a format I can decompress/read on my mac. I can handle MIME attachements, binhex, .zip, and lots of others (Stuffit Deluxe does all the unix crap like .gz and .tar). And I know I've seen a utility somewhere for my mac that lets me mount and format ST disks. Anyone recall the name of it?

Anyway, I'd really appreciate any help here. I always loved Bertha, my old trusty 1040ST. I should have kept some of the games and ran 'em under emulation on my Power PC.....

thanks in advance....

You feel the need to add aspects to the crime that are
not there. The analogy also muddles who is being damaged
and how they are being damaged.

Apparently, you don't feel the need to deal with the issue
in an honest fashion.

In article <323CF86B.7B79@worldnet.att.net>, Dan Phillips ☐|> > P>I have heard that the Nova graphics card is compatible with the Falcon.
|> > P>Is this true?

Yes, Nova Graphics cards work with The Falcon. You can use Mach64 graphics
cards with 1/2 MB dram or 2/4MB VRAM version of the Nova graphics cards.
Contact Homa Systems House (NA/English Distributors) at URL:

http://www.magmacom.com/~nima

for more information.

|>
|> Now here's the million dollar question: Is it compatible with Blow Up FX?

In short, yes it does.
Nova cards work on Falcons with TTRAM RAM upgrade boards. So people could have
the conventional 4MB of STRAM and then whatever amount of TTRAM.
Boards such as Blowup FX adds TTRAM to the Falcon.
Unfortunately, the STRAM upgrade board by ATARI and some other vendors that
increase the RAM to 14Megs don't work because there are not enough addressing
space left for the Nova card (ATARI uses them up due to 24bit addressing)

Nova cards can increase your screen upto 1280x1024 in 16.8 million colors,
and can speed up your average graphics by upto 600% in much higher resolution
and much higher color planes. They are incredibly fast.

Nima

4811. _ATARI ST EMULATOR THE TEST !

Newsgroup: comp.sys.atari.st
Date: 1996-09-17 00:00:00 UTC
From: ddrcrew1@aol.com
Message-ID: <51neb0$red@newsbf02.news.aol.com>
Source record: 137727

i have been tested 3 emulators on my p.c. tos2win,gemulator 96,and magic
pc
(demo version)
the ratio of compatibility is under at 10%
every atari software then i've been tested not works at 90%
well ! this is my questions :
1) if i had the rom card with G.E.M. in my p.c. they are much
compatibility with these 3 emulators ???

2)they are anybody here can i have 1 of these 3 emulators whith G.E.M.
card
and what are the compatibility ??

3) what of these 3 emulators is better

4) thank's to all for your answer because i want to buy this solution but
the report of compatibility in demo version does not seduct me !

TO BE CONTINUED....

5) AND NOW I KNOW WHY GEMULATOR DOES NOT SUPPORT A LOT OF
ST FLOPPY BECAUSE IF YOU HAVE DISK FORMATED AT 10 SECTORS PER TRACK
GEMULATOR CAN NOT READ THIS FORMAT THIS IS A REAL PROBLEM BECAUSE ALL THE
ST GAMES ARE IN THIS FORMAT FOR EX:DUNGEON MASTER !
IF THERE ARE ANYBODY HERE CAN KNOW AN EMULATOR CAN SUPPORT THIS FORMAT
PLEASE HELP ME AND SEND ME A MAIL !!!

BYE ALL ! FROM DDRCREW !
(excuse for my little english i'm french!)

Yeah, as if that would have really helped.
The Feeding Frenzy still would have begun.

If you are looking for relief from dongle-ware, try looking
in alt.hacker. I found links from there to a cracker for
Cubase/PC. Perhaps someone there can point you an Atari version...

Uhh... It worked, once I found out how to get TAR going. I had the wrong filesys for the RAMdisk though, and am about to gunzip and try again. If I have more problems, I'll look at the kernal.

Thanks,

Dan

4815. TT info needed!

[apoplectic fit deleted]

I do sympathize with you, having recently toasted most of my hard drive. It _is_ a pain to re-install everything. However, if you're going to be installing techie-oriented software (and I think MiNT/MintNet/etc fall into this category), the least you could do is make sure you have the technical knowledge to do so. Read the man pages; you should be able to get at them from your ISP. Don't go knocking the people who have, on their own time, unpaid, released such a variety of useful software. Any data loss is your fault, not that of those who released the software. You, it would appear, (and I) didn't back up our hard drives. We took the risk of losing data, and we lost.

4819. Line noise MegaSTE to mixer

Newsgroup: comp.sys.atari.st
Date: 1996-09-17 00:00:00 UTC
From: jnorton@nilenet.com
Message-ID: <51n3hm$s46@thoth.nilenet.com>
Source record: 137735

I have a MIDI setup. MIDI devices to mixer to amp. History.....

I eliminated noise by attaching a ground wire from the mixer to the amplifier. This works great. I get absolutely no noise when I record MIDI sequences (Dr. T's Omega) to MIDI devices to mixer to amplifier to recorder. (Why this works, I am not sure.)

However, when I try to hook up the RCA left/right jackouts from the MegaSTE to the mixer, the line noise returns. It is very bad!! Impossible to use!

What can I do to ground the MegaSTE to eliminate the noise.

Thanks......

I have the following pieces of software for sale. All prices are in pounds, and they do not include postage. Please get in touch to discuss a total postage cost. On average, you are probably looking at 50p P&P per item due to the size of the packaging with most games.

AtariWorks integrated WP, database & spreadsheet 50 UKP

Premier Manager 2 7
Dragonflight 7
Zool 7
Ishar 7
Drakkhen (Not STe) 5
Shadowlands 5
Legend Of Faerghail 5
Elite 5
HeroQuest 5
The Bard's Tale 5
Bloodwych Data Disk 4
Speedball 4
Hostages 3
Castle Master 3
Mission Impossible II 3
G-Loc 3
Shadow Dancer 3
James Pond 3
First Division Manager 3
Klax (2 copies) 3
Weird Dreams 3
Paladin 2
Demon's Winter 2
Deja Vu 2
Uninvited 2
Wizard Wars 2
Hard Drivin' 2
APB 2
License To Kill 2
Spherical 2
Tetris 2
Fantasy World Dizzy 2
Spellfire The Sorceror 2
Backgammon 1
Rings Of Zilfin 1

I remember hearing something about ICDBOOT being incompatable with Minix. Though I think it was just 'minit' that didn't like ICDBOOT, which means you have to boot with the HDDriver demo to format your minix partiton, but ICD will work fine afterwards. Could someone please straighten me out on this?

>The subject says it all! I am angry because of a problem with my hard
>drive caused by stupid ****ing software that is too ****ing poorly
>archived to be useful to all but the most ardent anorak wearer. I am

First of all, even with all the frustration you feel from trying to
run very unfriendly programs...all that nasty swearing is not
necessary.

>I think it is about time these STUPID and OBSTINATE, PIG-HEADED people who
>compile these archives start using some DECENT archive protocol that we
>know works well on the Atari platform, instead of giving us gzipped
>frigging tar files!! Something like STZip or LZH format would be nice
>dont you think???

Understand that these "formats" were made for Unix systems and yes
they are the backbone of the Internet long before Al Gore made his
election speech from it.

But you do have a point, why is the only ST program that can extract
these is a TTP that runs only under Mint. I hate having to use TTP,
if I can just install the application and double-click on it(like
LZH) then that I can live with. It is about time we move far away
from text-based command line interfaces.

Too bad no one could be able to write a GEM program that can solve
this like STzip and DC Xtract. I use those a lot! Too bad they also
don't have the same thing for ARJ files. I'm trying to extract the
Deadland game from Cnam FTP.

Oh yes, with a mainly PC world we should use mainly Zip for our
uploaded files. LZH is another good one for ST users as well.

Gee, does this sound like another programming challage from...

KGMD is a -complete- kit. You get gnu tools, and options to install
a gnu compiler, MintNet, and X. TAF provides just enough to get
you up and running.

DP>> P>I have heard that the Nova graphics card is compatible with the
DP>> does not work together with 14MB ST-RAM (Alternate RAM as much as you
DP>> want).

DP>Now here's the million dollar question: Is it compatible with Blow Up
DP>FX?

What do you mean by Blow Up FX. The Falcon FX Ram Card Extender from Blow Up or just the screenenhancer? As the novacard is a replacement for the internal graphics there is no need for the Blow Up screenenhancer, it would be better to disable it because then the falcon becomes faster. On the one hand if you mean the Ramcard I can only tell you that my falcon didnot work together with it when the nova was installed. On the other hand the is a little diode included to be soldered onto the nova so it is compatible with the fx ramcard.

For more infos try to get in contact with the developer of the nova:

What's the difference between KGMD and TAF? I thought they were basically
the same, only two different distributions.

>If somebody would translate it ...

Yeah, that would be nice. There are several really good packages out there
which are only in German- they would hit a much broader audience if they
were translated into English as well.

hi all: I have the original last version of Notator, Logic MIDI and Logic Audio
for Sale!! I was a dealer for music software and got two copies left.

This contain all the original new disks and Aden. manuals .

If you have Log3 or Unitor 2 already you can use Logic Audio with it!!

If you are interested in getting this , please write and I will give you a price.

I have both Cubase and Logic audio and Logic is really great.
Logic audio also contains the Digital Factory.

The package is all new and the software the latest.

Not having a Falcon, I'm not too familiar with GTP's but try this idea.
Rename the GTP to PRG, click once on it and press return. This gives a
dialog box that allows parameters to be entered into it.

Just an idea...

Hi: You can create a slide show with Apex Media by havin 24 frames x the number of seconds you want to have the same frame on the screen. Then, just distribute the FLI player and the FLI file. I have done this and it works very well as you can created picture in picture fades etc.

Interpreting US-law does not mean a thing to 99.99999% of this planet because those don't belong to the USA. Remember: America != Planet Earth although those living in 'Gods own country' tend to forget that. Fact is I am sitting in Germany and Mr. Malzer is sitting in Austria. US-laws don't mean a thing to neither one of us (nor does it to Mr. Felsche) [speeking of courtsessions here, we might accept them from a moral point of view].

Not to have anybody misunderstand this: I do not defend Mr. Malzer. I never posted anything alike myself. I just don't like the USA = World attitude of some of our co-earth-inhabitants across the atlantic.

Unfortunately, that's the reason that I bought Ease. However, there *is*
a way. I'll find the name of the program, then post it here. It's a
round-about way to do it, but it works. (I think the name of the program is
Starter or something like that - no, not Start Me Up although that might
work too)

Sorry about this Alex, but I have not had the time to go through any registrations at all since a month before moving jobs and to London. I do have your order and it will be processed soon... I have now started to go through all the registrations pending (there are tons to go through) as I am now getting in to the swing of things.. however as there are lots to go through, it might take about two weeks for people to receive their master disks.

Luckily, I am now getting in to the habit of things and settling down in my new abode.. so things are getting back on track.

All correspondence now to:

CyberSTrider
PO Box 78
Manchester M21 8SJ

denesh@cyberstrider.org
www.cyberstrider.org

Please note that all new STiK and CAB.OVL registrations should now go to Joe Connor (jconnor@cix.compulink.co.uk) as he has taken these up now.

Again, many apologies to those people waiting for their registered disks from me...

Regards
Danny

Just a thought<?>, is a clean boot totally out of the question?, the
game will work faultlessly on any ATARI ST, and even thought it has
been running under WARP9 (screensavers cock it up) for best results
you should boot clean IMO :), It also need absoloutly ALL the
processor time for best results :)

4855. Jedi... About this piracy thing..

Newsgroup: comp.sys.atari.st
Date: 1996-09-17 00:00:00 UTC
From: sf@itl.co.uk
Message-ID: <842963051.26826.0@sf_pc.itl.co.uk>
Source record: 137805

Dont worry, I'm not going on about cars and bikes again :-)

You asked for evidence that piracy is theft. Well here it is.

Any arguments ? Take it up with FAST, they can be found on the net.

Steve.

==========

Software Theft

Unauthorised duplication and/or use of computer software are serious offences under the Copyright, Designs and Patents Act 1988 which states that "The owner of the copyright has the exclusive right to copy the work ."

It is illegal to:

* copy or distribute software or its accompanying documentation, including programs, applications, data, codes and manuals, without the permission or licence from the copyright owner (i.e. generally the software developer);

* run purchased software covered by the copyright on two or more computers simultaneously, unless the licence agreement specifically allows it;

* consciously or unconsciously encourage, allow or pressure employees to make illegal software copies sourced from within the organisation or at any other location on the organisation's behalf;

* infringe laws against unauthorised software copying because a superior, colleague or friend compels or requests it;

* loan software in order that a copy be made of it or to copy software while it is on loan including an individual loan to a friend or colleague

Penalties

Both individuals and companies may be convicted of piracy offences. Officers of a company are also liable to conviction if the offences committed by their company were carried out with their consent or connivance.

Possible criminal charges:

A person who provides illegal software for use by others within or outside a company is liable to:

* Up to two years' imprisonment, or an unlimited fine, or both, upon conviction or indictment (i.e. trial or jury).

* On summary (i.e. non jury) conviction by magistrates, the possibilities are : up to six months imprisonment, or a fine of up to [[sterling]]2,000, or both.

As well as the above penalties, the owner of an infringed copyright may sue an offender for damages for infringement of copyright. Under UK law there is no limit to the amount which the complainant can recover in damages related to intellectual property.

It is important for software users to note that they can be guilty of copyright infringement even if they have not sought to copy or distribute software for the purpose of trade and/or direct commercial gain.

Management responsibilities

Officers of a company are responsible for ensuring that their organisation complies with the law. It is good practice for a company to ensure that it uses only properly licensed software. Even if a manager is totally unaware of software theft occurring within his/her organisation, it does not absolve a company from legal proceedings.

Conducting a software audit and establishing a policy to prevent theft are the first steps towards good practice in software use throughout your organisation. It is also essential to educate staff about the risks involved in software theft.

This article was extracted from a longer article written by Dr. Demetra Katsifli of Kingston University for their User Bulletin (July 92)

> Frank

Looks about right (except for the Nova card :). Under MagiC Mac,
running an 040 at 33mhz, Phoenix (Zenomorph) will render the
Klingon ship (with all the neat stuff turned on) about 3 times
faster than my Falcon (It benchmarks under your settings at
CPU 110%).

GEM Bench v4.01 * Ofir Gal - 14 Jan 95
==========
ST TOS 3.00
AES v3.99
GEMDOS v0.25
MiNT not present
Blitter not present
NVDI 3.31 present
Video Mode: 832*624*256
LineF FPU installed
Run and Malloc from FastRAM
Ref: TT + Fast RAM + FPU, ST High
MagiC Mac on a 33mhz Quadra
Graphics: 628%
CPU: 263%
Average: 530%

My 50mhz 040 does quite a bit better than this.

Soon I will have the Mighty running at 20mhz bus speed (now it is only 16mhz)
and 40mhz CPU clock. I will post those for those interested as soon as my soldering iron cools down.

Bye,

Mike

4859. Demo Crews

In regards to your statement about Gemulator not reading ST floppies, the problem , from what I understand, comes form a bug in early GEM versions. There are programs available that will convert a disk so that it will run on the Gemulator. I know, as I have used the one that came with my Gemulator. The program needs to be run on an ST or the DOS version of Gemulator. It makes a very minor change to the disk to make it DOS compatible. A disk formatted on a PC will work on the ST, provided that it is not to high of a density for the ST.

4861. Re^2: Cubase 2.0 (or higher) 'cracked' version needed

Newsgroup: comp.sys.atari.st
Date: 1996-09-18 00:00:00 UTC

John Perez wrote this to All about Cubase 2.0 (or higher) 'cracked' version needed: JP> I personally know of at least 10 Atari users that would
JP> purchase Cubase if it was $100. It is difficult for people to
JP> justify paying 2-3 times as much for a program than they paid
JP> for their computers. The Atari market may be small, and not
JP> all Atari users are musicians - I would agree with that; but
JP> what about the Atari users that are musicians but haven't been
JP> able to purchase a good sequencer because they are all priced
JP> for professionals? A market is what you make it, and pricing
JP> software in the $500 range certainly guarantees a small
JP> market.

Hi John,
In my opinion, it's not only the program as a product you buy -it's the function. This function is something that's essential to be able to control all the synths you buy and then the price of the computer is of no relevance. Would these users you know hesitate to buy a new fantastic synth for the $500 ? ;)
Maybe they would concider buying a stand-alone hardware sequencer for the same price instead - it has about the same functions, but isn't as easy to work with as the program. They would probably feel more like they've bought a product that's worth the money - they have a new 19" rack unit to look at - even though the computer program that costs the same would have done a better job...
Still, if you buy a Falcon with Cubase Audio and some extra equipment like 8 outputs, S/Pdif interface etc, the cost doesn't even come close to comparable systems that are PC or Mac-based, so I find the program well worth it's price - since it does the job I need it for.
JP> Music software is a peculiar thing, it is intended for
JP> professional use and priced accordingly, but this leaves out
JP> the aspiring musicians and composers, the hobbyists, and the
JP> students of music. Such individuls cannot afford the
JP> excessive prices that are asked for these programs.

Maybe not - but they still buy much more expensive synths or that hardware sequencer...
You don't buy a Ferrari when you don't need more than a Fiat, and if you feel that you need the Ferrari after all, you just have to pay for the extra power.

JP> I firmly
JP> believe that the market would change dramatically if one of
JP> the high-end sequencers suddenly became affordable to the
JP> masses.

There are cheap sequencers available - both commercial and as Shareware, so actually, there's no problem. However, if you want to have the best, it's gonna cost you and that's the same thing with all kinds of products - the best are

always among the most expensive since there is most development work put into these products.
By the way, does Cubase Audio cost only USD500 where you live? If so, it's extremely cheap... If bought here in Sweden, it costs about USD1300 and if bundled with a new C-lab Falcon, it costs about USD650, and still people that need the program buy it.

Best regards,

Claes

: No, my attitude's based on hearing them in bars talking as loud as
: they possibly can....

Slithering drunks in a bar?
Tis hardly fair to judge the people of a Nation as large as the United States by a few bars in a Few Cities my friend. The US is a very large country, with thousands of different types of communities, each with hundreds of places to hang out and be social, professional, or whatever. You can go to Indiana and hang out with Quakers, or go down to New Orleans and party with the Cajins...or you can pop over to Texas and taste the laid back western flavor...or drop in on Seattle and check out the Alternative scene...go to Atlanta and taste "Southern Hospatality". The list goes on and on. From State to State, City To City, you find that America is very diverse. Yes...there are a lot of jerks, wussies, and so on..but you'd best look a little deeper and travel a bit more before you decide that everyone in America is like the few bloaks sitting in a few particular bars in a few particular regions of the Country. I personaly do not frequent bars...as I find other social outlets. Does that make me a wussie? What if I were over in Ireland and just happened to pop into a bar that "JERKS" happen to frequent? Well, I certianly wouldn't come to the conclusion that everyone in Ireland was being represented by these few individuals!

: Of course you did, it has a culture

Everyplace I've ever been has culture...
Be it the oral traditions of the South (USA)...
The grat melting pot of New York...
The Acadian/Indian/Italian/French/Negro blends of New Orleans...

In the last 50 years...America has produced the most extensive, and widest variety of culture in the world. I dare not argue that it is the best... or the most complex...but it's there...a grand mixture of cultures from all over the world. My home town happens to have been built by Irish immigrants...many of their traditions, values, and beliefs still prevail here. About 10 miles away from that home town was a hot bed for Jazz and blues music. Country and Folk was rocked in the cradle of Nashville not far North from here. In additon to these "american" examples of

culture...many of us were brought up learning western traditions and arts as well. There is an Irish Bag Pipe band in my town. A Native American drumming group. John Phillips Sousa Style marching bands. Rag Time...Rock...BroadWay Theatre...ShakeSpear Fests...Renissance Fairs...Colonial Drum and Fife corps...Symphony Orchastras...and much more...

If you're looking in bars for culture...you will find it...but don't expect to find much more than smoke filled rooms and loud third rate bands (if you're lucky enough to find a bar that'll bother hireing a live band).

: into this category), the least you could do is make sure you have the
: technical knowledge to do so.

This makes for wonderful irony when read together with all the posts stating that installing MINT and MintNet is easy, and not just for techies.

Don't get me wrong, I am very grateful for any programmer expending effort on the Atari communities behalf. It is jsut that I have been having trouble with tar gnu-zipped archives for months, and have posted here about it, and have seen posts from others here about how they can't install this software (MintNet usually) because _they_ can't un-tar/gnuzip it. People have been pleading for a zipped or lzhed version of this stuff for months, over a year actually.

And, of course, because I can't get it to work, I can't help anyone else on this one. I'm just not a techie. I'm sorry. I use this p[latform vecause it has a GUI that is within my limited abilities. But certainly it seems like someone who _has_ got the files to work could upload them to cnam or somewhere as a zip or lzh archive instead of a tgz archive.

Just my two cents.

4868. Best Way To Run Windows On Falcon?

Newsgroup: comp.sys.atari.st
Date: 1996-09-18 00:00:00 UTC
From: bjr@edison.ebicom.net
Message-ID: <51obpi$vn5@einstein.ebicom.net>
Source record: 137618

What are the current options to run Windows (Pref Win 95) on a Falcon?
I keep reading rumors of a 386 processor card for the Falcon...but I've
only seen actual info for a 16mhz 286 board.

Really, the only thing I'm interested in running on windows/dos are
some of the CDROM packs out there, and maybe NetScape. I don't want
Windows bad enough to go out and buy a bare bones PC...but I'd love
to get a Card for my Falcon that'll allow me to use my existing
Hard Drives/CDROMS/Etc. and get a useable speed multimedia Windows set up.

Thanks,
Brian

4869. RIBEL C90 CARD HELP NEEDED !!!!!

Hi,

I need very very quick help for an Ethernet card called RIBEL C90.

There is on it Jumpers :

J1 to J6 next to the BNC connector
J11 alone
J8 to J10 next to the VME port
J17 to J23 next to the memory

I want to make it running on TT030 ...

For the moment I have the driver for Ribel + !?
It always said that it don't find the card ...

So have you got a driver for it ?
Could you give me more informations about the jumpers because I have
no documentation of it !!

Please reply by Email ... !!

Thanks per advance for your help !!

With Best regards,
Herve

That's a bit wrong. The version to look for is AES4.1, and it's more
recent than TOS4.92. It's a plain GEM.SYS file that directly replaces
the one that came with multiTOS.

>Well, now , why bother with TOS 4.92 (made by atari BTW).

It's actually a lot faster than MultiTOS (at least in it's AES4.1
incarnation). It also allows Speedo fonts to be used in dialogs.
Pretty much all of it's functionality (and then some) is included in
all of the AES replacement (including my own baby XaAES).

You haven't seen an SC1224 on a TT, period. The horizontal sync rates are not compatible (31 versus 15.75). (Oops, unless thay have a video card that does 15.75, that _might_ be possible.) The TT can't put out the variety of sync rates the Falcon can, just VGA and ECL. You may have seen an SM124, since it is a VGA monitor essentially, or the Atari PTC1426 (TT VGA monitor).

Well, apparently you didn't understand what the topic was.
We were talking about the TOS 4.92 singletasking, not the new AES for
Mint. This file is a TOS image and thus loadable in RAM at the
boot time, just like the way Winx does. Even if the desktops are the
same, they don't run the same way. PLease read the whole message and
do some research before saying anything.
Thanks bye.
P.S: I still maintain what I said in the previous message.

Click on "Show" - just to the left-of-centre about a fifth of the way down the screen. A small menu drops down from which you should enable "Volume". Below each waveform there will now be a blank area. You can draw volumes by selecting the pencil tool, holding down "Alt" and drawing. It will draw at the current quantize value.

Hope that saves you from having to consult the manual :)

Diamond Format is a good program to just set the boot sector to PC compatible
without damaging data. Might work.

Hi Phantomm.....
I hated using TRUE Paint for animation, because it was so buggy and crashed quite often. I believe the TP animation was proprietary, and I'm not certain if there are any direct converters, although if you could break down the TP anim to frames like targa, jpeg or GIF, you could then load them into Apex Media, which is a GREAT animation/art program for the Falcon. I hughly recommend Apex, if you don't already have it.
Apex also supports the Expose Video digitizer (which I don't have).
I have made many animations with Apex, and have converted many of my old Cyber SEQ. animations to FLC format with Apex.

>
>In regards to your statement about Gemulator not reading ST floppies, the
>problem , from what I understand, comes form a bug in early GEM versions.

That's technically not a bug in TOS (nothing to do with GEM at all); it's the brain-dead programming of MicroSlop, who decided that if 4 bytes in the boot sector aren't exactly so, then the disk must be unformatted. This is clearly demonstrated by the following:

>There are programs available that will convert a disk so that it will run
>on the Gemulator. I know, as I have used the one that came with my
>Gemulator. The program needs to be run on an ST or the DOS version of
>Gemulator. It makes a very minor change to the disk to make it DOS
>compatible.

And so you see that MS-DOS is incapable of checking the disk to see if it actually is formatted or not; it simply looks at the boot sector and, if those four bytes don't match the dimwits-in-Redmond's arrogantly preconceived idea of what MUST be there, Messy-DOS declares the floppy "unformatted." Q.E.D.

> A disk formatted on a PC will work on the ST, provided that
>it is not to high of a density for the ST.

This is correct. Of course, it is EASY To format a disk on the ST that will be too high a density for the PC in many cases (depending on the floppy controller in the PC). I can format up to 21 sectors per track and up to 84 tracks reliably on my Mega STe, but the wife's 486DX4/120 can't read more than 18 sectors or 80 tracks.

Wayne, I can post the "how-to" for converting an old Atari trakball (I forget the model number, it's the huge beast with a billiard ball for a control), or I can do the conversion (I have a couple of spares) and sell one to you. Your call!

> The best harddisk driver software is HDDriver and SCSI-tools.

Hello,

I use a 1.6 GB IDE Conner disk on my Falcon. The SCSI Tools cannot
handle it (only about 1.2 GB is available), but with the HDDriver
everything works fine.

So, avoid the SCSI Tool, too. ;)

Frankly, Brian, the only way I've found to get a "usable speed" Windows
setup is to run a 120 MHz (or faster) CPU, or a 100+ MHz P5. AFAIK there's
no such animal for the Falcon.

The Atari Users of North Texas are hosting another Atari computer show
this year! The event is on October 12th, running from 8:30am until
4:00pm, in the Infomart. We WILL be having a free raffle this year, so
make sure you head upstairs to the club meeting room for your entry
form. (Room 3021, the Carlson Room.) There will also be a 4 player
MIDI maze game set up, as well as my classic Atari video game
collection - play as much as you like, free!

For more info: http://www.fastlane.net/~lwebb/

Attend the Dallas Atari Show - Saturday, October 12th, 1996 at the Infomart!

4883. Best Way To Run Windows On Falcon?

Newsgroup: comp.sys.atari.st
Date: 1996-09-18 00:00:00 UTC
From: daymon@mammoth.psnw.com
Message-ID: <51pbs3$7od@alpine.psnw.com>
Source record: 137633

I have heard these rumors of a 386 card, too, but others have told me that it hasn't been developed yet, or that it never will be. Now here's my question: If they can make 286 and 386 cards, why not shoot for a higher CPU such as 486DX4, Pentium, or even P6? 486's and Pentiums are pretty inexpensive now, aren't they? Maybe there's something inherently more difficult to do in order to make it work, but it sure would open up a bunch of new possibilities for the Falcon! My dream system would be my Falcon MK-X with a 2 Gig HD, 8x CDROM, 68060 66 MHz CPU card (not made yet also), a Pentium driven PC emulator, and a Mac emulator (along the lines of the way MagiCMac works for them). This of course is all a dream, but someday? Soon? We can only wish, huh?

Source record: 137636

I have a limited quantity of cartridge holders for sale.

It is an HP original container used for holding one cartridge, either a black or tricolor cartridge. Excellent for storing any extra HP inkjet cartridges you may have (especially if customized for different colors).

If interested, forward $5.00 plus $1 s&h in certified check or money order to me at the address below:

D W McAndrew
PO Box 532
Forest Hill, MD 21050
USA

As there are limited quantities, when depleted any further orders will be returned/refunded immediately.

4887. Speech routine in GFA-basic - 2 bombs

4891. DBA Magazine to quit

Newsgroup: comp.sys.atari.st
Date: 1996-09-18 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.091896.205804.59@wxs1-15.worldaccess.nl>
Source record: 137641

I heard today that DBA Magazine will cease publication. Sietse "Slimer" Postma seems to have thrown the towel in the ring. Remaining DBA members, together with people from Synergy, will form a new group called FUN. They may do one more issue of the magazine with a variety of stuff that was already written for the new one, and they are also planning to do some Falcon-specific projects.

Thought you all might want to know. What with "ST NEWS" having folded a bit more than a month ago as well, it seems all we have is "Maggie" when it comes to high-quality oldies. Good luck to them!

>n> auto folder. No luck. Just goes to the regular desktop. All other
>n> accessories and auto folder programs run.
>
>n> I'm running TOS 1.4 on an ST with Warp 9. Help?

>You need a little program called Startgem in your auto folder, putting
>Teradesk in the auto folder won't do any good I'm afraid. I use
>Startgem, and it works every time.

I have been following this, since I was running TD on a 520ST with
TOS1.0. I had it rigged to install an autobooting RAMdisk with
TD in it (in DESKTOP folder) and used STARTGEM to autorun it.
Then I got a TOS1.4 machine, and STARTGEM wouldn't work anymore.
As a result of following this thread, I made a new boot diskette
with TD in DESKTOP folder and (essentially) nothing in AUTO. Once
I select DESKTOP.PRG, Install Application, Auto, and then save
the desktop (to drive A), it works. It apparently won't work from
the booting RAMdisk, possibly because the Auto application setting
is in the DESKTOP.INF file on drive A, and the system doesn't know
enough to look in the drive E booting RAMdisk for this file. Or
even to put it there when you save it.

Too bad, really; I liked having TD come up instantly after a warm
reset!

Heh...for any SLIP connection, then the only choice is the STiK package
with CAB browser. Bit of a pig to set up from what I hear, but good deal
it is. Of course if it's only a shell account then any terminal program
that supports VT-100 will do.

You should be able to format DOS disks on your Power Mac and use those.
The ST will read from DOS disks, but they MUST be double-sided. Make
sure you have Mac Finder 7.15 or higher or you'll need the Apple File
Transfer or something.

> Anyway, I'd really appreciate any help here. I always loved Bertha, my old

Only mouse driven GEM games would be able to run under MagicMac or any
form of Magic. Those I have I run under the Geneva demo for a real cool
look :)

HT>English as well.

The manual-archives for the KGMD are 2.5 megabytes (packed!) big...

OK, the install-guide has only 13.5kB, but what would it help, if someone translated /this/, and all the online-helpfiles (man-pages) are still in german?

Michael

4903. Email with Oasis 1.35E

>smtp batch off
>smtp beep on
>smtp delay 600
>smtp gateway 194.51.83.2
>smtp maxclients 10
>smtp mode route
>## smtp separator ??????????
>smtp timer 60000
>smtp trace 0
>smtp wait 60
>smtp verbose on

To avoid the 2 bombs, you only have to set a hostname... in your
STARTUP.NOS put "hostname falcon060.imaginet.fr" and that's all.

I had the same problem and tried nearly all with smtp subcommands, and
found the hostname trick only 2-3 months ago. I think NOS uses the
hostname only for the greeting message in the smtp and ftp *servers* but
perhaps also in the "helo" command of the smtp client.

If you want to manually kick smtp, you can set the auto-kick timer to
zero (smtp timer 0), it works. Unlike the nntp auto-kick timer declared
for each newsserver, where you must set a big number, the zero locking
totally the client...

bye! Bruno.

We got the Hewlett Packard C3725S external 2 gig SCSI-II from Frye's Electronics in San Jose, CA. After phoning around, we found these are a bit hard to locate unless you go to a large distributor. Frye's have many, so we had one saved and made the drive to San Jose to pick it up. Prices there are excellent. BTW, Frye's have quite a few stores in CA--not just in San Jose, though that is one of the two biggest I think.

This drive is PERFECT for Cubase. We are very happy.... <S>

Not true. I have a 240+ meg MiniX partition and I was running ICD when I
installed MiniXfs - and still am, for that matter. Still, I would
definitely recommend HDDriver for a new installation. Faster, a little
safer, certainly more current development.

DC Format is one of the few programs that can write a MS-DOS boot sector
on any ST floppy. And there was this one program, I forget the name,
that can read the boot file and make a file from it. It uses this file
to write to the boot sector. Soo....I copied the boot sector from a
pre-formated disk and that's that. I'll have to play around with DC
Format more as this is the only way I can have a one-in-all formatter (I
need one for DOS boot and twisted format). But 9 times out of 10, PC's
can read a disk formatted by M-Disk :)

The original poster didn't come right out and say it, but I think the
disks he is having trouble with are those like Dungeon Master that are
formatted over 80 tracks and copy protected boot disks! DCFormat 3.02
isn't going to help in that case! The IBM bootsector will mess up the disk
terminally! It will work fine in the case of non-protected disks, and in
the worst cases, they can transfer the files to more than one IBM
formatted disk.

One of the points that irritate some people is that it is a catch 22 sort
of situation! You need Mint to run gtz and Mint itself is GTZed? Unless it
comes with the type of setup that the TAF distribution did! That worked!
Even though I did find out that a 4Meg STe just doesn't have enough memory
to give a usefull Web package room to run properly!

Well, for a preliminary (I can't run at 40 MHz long enough to run the whole test, and can't get this Freekeys stable either, grr), I get 150% CPU and 350% display at 36 MHz with NVDI 3.01 in 640X480X16 colors.

KGMD is 99% English. The install program and some of the comments in some shell scripts are in German. All the man pages are English. I've been using this since it was released and it works great, especially for internet access. I can even download my news via nntp in the background while browsing the web.

I will try to find the notes I made when I installed it. They are just all the answers I used when prompted by the install program. If you run the install doc through ruftrade it gives a fairly readable translation. At least it was for me. If I find my notes I will try to post them somewhere.

Brad

P.S. If anyone tries to email me with questions about this and the mail bounces back, keep trying, my isp is doing a major upgrade and there are problems. The worst one is I haven't been able to get my mail for 5 days!!!!!

4919. Help! Freekeys users!

Newsgroup: comp.sys.atari.st
Date: 1996-09-18 00:00:00 UTC
From: Dan Phillips <xiting@worldnet.att.net>
Message-ID: <3240E7F5.759F@worldnet.att.net>
Source record: 137669
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

Help!

I just got a Freekeys and can't get it to work reliably. The last time I ran the system, I got it to work. Once I move the keyboard case, it tends to stop working. When the Falcon boots, it will either give short bursts of keyclicks separated by pauses or will make no noise and nothing will work (keys or mouse).

I've checked for continuity and it seems okay. I hooked the connector in the case to the connector which goes in the Falcon case to isolate the cable, so it's not a cable problem. It's very odd, sometimes it works, sometimes it doesn't. I thought I had it nailed down to the female connector at the Freekeys case, but now that doesn't seem to be it.

One odd thing about the cabling: there are 8 wires for the keyboard connector. Freekeys only runs 3 lines plus one ground. This ground I connected to the main ground plane of the motherboard at the Falcon end. So what happens to the other 3 wires? (One of the 4 that don't seem to go anywhere is a common ground with the ground line.)

Thanks for any help,

Dan

> techies.

I hear the same crap all the time myself. "Oh, setting up Binkley only
took me 20 minutes! Just read the manual, you'll see!" Yeah, right.
People said the same thing about each and every poorly documented program
I ran into. Even the ones with gads of docs are a piece of sh*t to
get running if the programmer hasn't documented an easy step by step
method to get it up and running.

> Don't get me wrong, I am very grateful for any programmer expending

Since whoever produces mint files must not read these pleas, or is terribly
sadistic, mayby you could talk someone who actually runs the program into
zipping up all the un-tar'd files you'd need to run, and
sending them to you or their favourite ftp site, or both. I feel for ya man.

> And, of course, because I can't get it to work, I can't help anyone
> else on this one. I'm just not a techie. I'm sorry. I use this
> p[latform vecause it has a GUI that is within my limited abilities.

Amen for that. I couldn't have typed it better myself. I think I'll
consider using the above paragraph for a sig file.

> But certainly it seems like someone who _has_ got the files to work
> could upload them to cnam or somewhere as a zip or lzh archive instead
> of a tgz archive.
> Just my two cents.

Amazing, isn't it? good luck.

Actually, I've heard rumors of mixed success installing one of the '486
accelerators made for '286 clones on a Falcon Speed. You could ask around...

4924. Re^2: Typical Atari users...

Newsgroup: comp.sys.atari.st
Date: 1996-09-18 00:00:00 UTC
From: claes.holmerup@p5.dada.ct.se
Message-ID: <ftn_2.200.136.5$fidonet.org_be87cc39_Claes.Holmerup@p5.dada.ct.se>
Source record: 137674

JEDI wrote this to Claes Holmerup about Typical Atari users...:
>> The honest ones start buying the software they use, but the
>> dishonest will never buy the software anyway. They just live
>> like parasites on the ones that do pay for things they use.
>>
>> >> Piracy is always theft and always will be.
>> J>
>> J> Fortunately your legal authority is absolute zero.
>>
>> I don't care what your opinion about piracy is, but according
>> to copyright laws, it IS illegal (sadly not in all countries,
>> though).
J>
J> It's not my opinion. It is fact.

Absolutely NOT a fact. In my country, software piracy can give you up to two years in prison, as well as practically unlimited damage costs to the copyright holder.

J> 10 year old parts are simply not needed. While the ST had a
J> certain advantage a decade ago, that is ancient history now.
J> Daydreaming about 'the glory days' really does not get one
J> anywhere. The availablity of new PC parts quite makes up for
J> the problems that would be associated with maintaining a 10
J> year old PC in it's original condition.

A 10 year old PC can't be used for any new program or game and that's why people throw them away and the parts aren't needed. When it comes to Atari computers, the programmers have always optimised the code - so their programs don't need 16 or 32MB of RAM and 10MB on the HD to be able to run. All games I know of run on 1MB machines. The best word processors and DTP programs run on 2MB and even though a hard disk is preferred, it's not impossible to run from disk... You can still run Cubase Audio on a 4MB Falcon, but Cubase Audio for PC has completely different demands...
Cubase on the ST can be used on a 1MB (!) machine, but if you need score editing, you'll need 2MB - still very impressive programming. It seems like PC programmers don't care about the users - instead of optimising the code they demand a faster machine with more memory and HD - do they have stocks in the hardware factories or are they simply lazy?

>> My point here is that if someone plays games that can be held
>> on one disk or if he uses the ST for writing letters or other
>> simple tasks, he simply doesn't need a harddisk.
>> I couldn't live without a harddisk, that's for sure - but there
>> are many that really wouldn't have any use for it.

J>
J> Then they creep along on their 10 year old machine until it
J> finally dies and they must move on.

That's ok, since the computer does what they want it to. They don't need anyone telling them what to do.

J> Or they move on when they realize that they can get an
J> entirely new system for less than it would cost to improve
J> their old one.

If they do, they can always stay with the Atari line of computers if they still like the way they work. Otherwise they'll move to another platform - but that'll be the day they decide for themselves.
You shouldn't critizise the computers that the readers in this group love to use - let them use whatever they want to. As I've told you before, it's no advocate group or computer war group. Besides, when compairing what you just said with facts about PC's, it's exactly the same way (actually worse!)- too often it's cheaper to buy a new machine than to repair a 3 year old one -especially when it comes to branded PC's :(

J> I've already admitted that the Falcon has a certain value in
J> certain, relatively small, niche markets. Beyond that, Atari's
J> loose ground day by day (and have been doing so for YEARS).

Well, there will always be very many musicians around the world and the old ST's and STe's are a great bargain if they buy a used one. If they buy Cubase, they can always upgrade or cross-grade if they move on to another computer, like Falcon, Mac or PC.

J> With the exception of a few notable exceptions,
J> software can be very much cheaper on a PC. There is a much
J> wider market with much better price competition, competition in
J> general as well as a rather nice secondary market.

For the PC, there is one dominating company (Micro$oft) that make the high-end software that most people use and they are very expensive. I wouldn't call this a healthy, competitive market -Micro$oft can do whatever they want and they know that people have to continue buying their products if they want to be compatible with other users and companies. They even force people to upgrade their operating system when they release new versions of a program, since it simply won't work with older OS's.
The high-end programs in the Atari world are much cheaper and still don't lack any essential functions. Well written Atari-programs can be run on any TOS. What's the need for 100 word processors when most people choose between two of them and never concider the others (even though they have many functions that the user will never use)?

>> J> Then, there is that daunting task of
>> J> finding a Falcon (mail order & overseas mail order don't
>> count) J> or any hardware or software for it.
>>
>> Why wouldn't mail order count?

J>
J> Why? Because this is no longer the 1890's.

No, it's the 1990's and the mailing is a LOT more efficient than it was back
then and mail-order is very common these days because of that...

>> If you want to use a certain product, you buy it wherever it's
>> available - you don't wait until a shop around the corner has
>> the product in the store, do you?
J>
J> You're just making excuses for the fact that you can't shop
J> for your computer around the corner.

Today, it's impossible to make a living by selling Atari machines. The PC
domination of the market has seen to that. At my work, our main thing is
building and selling PC's (several thousands every year), but we sell Atari and
Amiga as well, since we care for the customers and want to give them what they
want to have. If you wonder why we don't have Mac, it's simply because there's
almost no demand at all for them where I live and there are already too many
Mac specialists around for the meager market.
When we sell computers to musicians, we can also offer them musical
instruments, as well as studio equipment if they want to.
We've even sold Falcon/Cubase Audio systems to the main TV-company here in
Sweden, as well as to some radio stations and recording studios. We've also
sold Amiga systems to TV-companies.
The reason why many shops don't carry Atari is lack of knowledge or the greedy
bit - they make more money on selling PC's in great volumes (I know we do...).
We don't want to force people into buying products they don't want -we let them
choose for themselves - most buy PC's, but there are still many that buy
Falcons and some that buy Amigas...

>> Simply compairing with the competition at the time, since
>> that's what the jerk complained about. Actually he made the
>> mistake of compairing old ST's with modern PC's, which isn't
>> relevant.

J> Since the ST is the last Atari to be produced in significant
J> numbers, and the only one that is/was price competitive with
J> any other current platform, it is quite a relevant
J> comparison.

When you compare products, you can never compare two that are 10 years apart.
That can't be justified for any reason.
The ST hasn't been produced for many years now...

>> J> <VAPOR> ATARI </VAPOR>
>> J>
>>
>> What's vapor about the Falcon, Hades and Medusa?
J>
J> All but the C-Lab Falcon don't appear to be available in the
J> US unless one is willing to be one's own importer. This is a

J> very untenable position. Mail order out of state is enough of
J> a dubious proposition.

That's too bad - try to make the Atari dealers import these products too if
they don't have them yet - they're VERY fast TT-clones.

>> They are products that are available this instant.
>> Stop talking about things you are so obviously ignorant about
>> or you'll look as foolish as the fool who wrote the original
>> mail.
J>
J> I take my Cues from www.toad.net. If you've got some
J> better one's you're more than welcome to put up. Otherwise...

I have no idea what's being said there, since I don't have an internet account
(I wouldn't have time for it anyway), but I know quite a lot about the market
since I am an Atari dealer and am in frequent contact with several companies
that make things for Atari.

Claes Holmerup (claes.holmerup@p5.dada.ct.se) wrote:

: In my opinion, it's not only the program as a product you buy -it's the
: function. This function is something that's essential to be able to control
: all the synths you buy and then the price of the computer is of no
: relevance. Would these users you know hesitate to buy a new fantastic
: synth for the $500 ? ;)

Almost all of them... Most of the hobbyist and amatuer musicians that I
know have spent less than $500 on all of their instruments combined. I'm
talking about people that would like to compose and record their music,
but thanks to the musical equipment industry, are unable to do so. Synths
are overpriced, software is overpriced - remember, many of us bought
Atari's because they were affordable.

: Maybe they would concider buying a stand-alone hardware sequencer for the same
: price instead - it has about the same functions, but isn't as easy to work
: with as the program. They would probably feel more like they've bought a
: product that's worth the money - they have a new 19" rack unit to look
: at - even though the computer program that costs the same would have
: done a better job...

Several have resorted to this, or even merely buying a 4-track tape
recorder. Neither offer the kind of compositional flexibility of, say,
Notator.

: Still, if you buy a Falcon with Cubase Audio and some extra equipment like 8
: outputs, S/Pdif interface etc, the cost doesn't even come close to comparable
: systems that are PC or Mac-based, so I find the program well worth it's price -
: since it does the job I need it for.

This is true, but still there is little incentive for most people to
purchase a dedicated music system, which is what the Falcon would be to
most people. The percieved value of a Falcon is much less than a
comparable PC or MAC simply because of the software support. People feel
better if their computers can play Doom and surf the Internet, as well as
sequence.

I personally find it to be worthwhile, as I own one Falcon (with a second
on order) along with Logic/Audio, Notator, Cubase, and Cubase Audio, and
many other types of software as well.

: There are cheap sequencers available - both commercial and as Shareware, so
: actually, there's no problem.

And most of those sequencers were purchased by musicians (such as myself)
only to find out that they were not particularly usable for composing.

There are few programs in any category that are worthwhile, and the best need not be overpriced.

: However, if you want to have the best, it's
: gonna cost you and that's the same thing with all kinds of products -
: the best are always among the most expensive since there is most
: development work put into these products.

But that's just my point. Cubase and Logic for the Atari are not the best anymore - development has stopped, support is dwindling, and the features available in the Mac version of Logic Audio (for example) far surpass what Emagic bothered to put in the Atari version. How can these companies expect to vend abandoned products for $500 to an abandoned platform?

Look at it this way, the game Stonekeep cost about five million dollars and several years to develop - some might argue that this is one of the best games in it's class. Does this mean that the game sells for more than every other game? No.

If Cubase, Notator, or Logic (in their full versions) were available for $100, people would be able to spend $300 on a very usable MIDI sequencing system - I think many more than are dropping $500 for just a piece of software. People need some reason to purchase an Atari at this point.

I personally find it arrogant for software developers to charge that kind of money for their product. Many musicians put several years of work into a CD, with no idea whether anyone will buy it, but they don't attempt to compensate by jacking up the price of their CD to $500. If they did, they would guarantee the market would be small.

If all computer games were $20, and all applications were $100, I believe that piracy would decrease, and people would actually end up spending more money on software in the long run.

: By the way, does Cubase Audio cost only USD500 where you live? If so, it's
: extremely cheap... If bought here in Sweden, it costs about USD1300 and if
: bundled with a new C-lab Falcon, it costs about USD650, and still people that
: need the program buy it.

Most people don't ever need any program, but lots of people may want it. Is it sensible to price software such that only those that "need" it can afford to pay for it? My brother, for example, is a musician/composer who sings, plays guitar, keyboards, and drums, and has an Atari computer. He, like many others, would like to compose music with his computer, but cannot justify the kind of expense necessary to obtain a good sequencer.

Aloha,

John Perez

> dies and they must move on.

creep along?
is this some reference to processor speed? cos it is, it's a bit crazy..
8mhz processor. does the job.
200mhz processor. does the job but gets totally crippled by the OS..

I use my ST because I LIKE it and it does what I need from it.
seems like you've swallowed tooo much of the microsoft bible.
'thou shall blaspheme any system other than the one that god created,
and thou shall entertain the requests for more memory and harddrive
space every 2 months..'

>
> Or they move on when they realize that they can get an entirely
> new system for less than it would cost to improve their old one.

and what a wide range of upgrade options there are according to the
popular press and people like yourself..
ooh, I can get a PC or a Mac..
no thanks..

If, and when, I upgrade I'll probably be getting an Amiga.
hell, I've already got one 'dead' platform. Might as well get another..

>>If you want to use a certain product, you buy it wherever it's available - you
>>don't wait until a shop around the corner has the product in the store, do you?
>

> your computer around the corner.

big deal! to my knowledge (and I'm the first to admit I could be wrong)
you don't go into the local store, just round the corner, and buy SGI
software can you? but still SGI's get bought, so they must be getting
their software from somewhere? Neptune?

>>In 1988 noone asked about how many colors could be shown on the PC they bought
>>(only if it was Hercules, CGA or VGA), but graphics cards with more than 16
>>colors were available - but at a very high price level. Remember that the
>>standard VGA setting in Windows still is 16 colors...
>
> One of the few strong points of the PC was the relative
> ease in which one could expand this. The capacity was there
> and the upgrades were both numerous and available. Once one's
> needs expand beyond the _bargain basement_ stage, options
> were are very limited with the Atari's. _Power without the
> Price_ becomes a mirage real fast.

the possible downfall of the pc is the vast amount of plug in cards..
you write a simple bit of code that prints 'hello world' and you need to
include all the drivers for all the different cards..
that bloats up the final executable, which in turn requires more disk
and memory space. couple that with the PC's archiac memory structure and
you've got big problems..
ok, the PC has a chip that is pretty damned powerful, but most of its
power is spent chucking memory around so the hardware can use it...
between the ST and the PC, I know which one I'd rather code for!

jon..

4929. FOR SALE LOGIC AUDIO/NOTATOR 3.2/LOGIC MIDI **

Newsgroup: comp.sys.atari.st
Date: 1996-09-18 00:00:00 UTC
From: guitarra@afn.org
Message-ID: <51nqfl$4nd@huron.eel.ufl.edu>
Source record: 137751

I have foe sale two packages of NOTATOR 3.2/Logic Audio 2.0
and Logic MIDI last version. I have all the new original disks and
literature.

If you have Unitor2 or LOG 3 you can run these programs and the
great Logic Audio on your Falcon!!

Every thing is new and the programs run great. Also included new
support disks and demo songs.

I also have two DIGIDESIGN "SoftSynth" packages in the original
plastic box with registration card.

Softsynth runs on ST or Mega also Falcon. It uses 32 oscillators
additive and FM synthesis for noisless production of Sampls to be
transfered to your sampler!!

Supports E-mu Emax TM
Ensoniq TM
Korg RolandTM
Akai etc.

Please send e. mail if interested. Raymond

c>
c> I think it is about time these STUPID and OBSTINATE, PIG-HEADED people
c> who compile these archives start using some DECENT archive protocol
c> that we know works well on the Atari platform, instead of giving us
c> gzipped frigging tar files!! Something like STZip or LZH format would
c> be nice dont you think???

For what little it's worth (and I know it's not much) I wholeheartedly agree. Who on earth uploads in this format? Do the Sysadmins go around rearchiving stuff in order to save 3 bytes and alienate the only people interested in downloading it? Rather than 3 bytes they could save a helluva lot more by dumping the lot than giving us this inaccessible load of all tosh. And that's not to mention the old utilities that weren't any good in their own day, let alone now.

FFS, I can't even unarchive edith121.zoo without getting a correupted archive message... B^{<

c> Your help will be appreciated...

The only suggestions I can offer will be the obvious ones or the 'wise after the event' ones, so I'd better keep quiet...

g> Does anyone know how to make Magic4/MagxDesk recognise .GTP files as
g> executable programs?
Presuming that you get as far as a dialogue box asking for parameters then that's what it should do - Gem Takes Parameters.

g> Whenever you click on a .GTP program, MagxDesk doesn't think it's a
g> program. Hence I'm unable to run them :(
I ran the Ghostscript .GTP file by renaming it to .PRG.

Speak to 'ya later!

Hi Frank,
Does the NOVA card work fine with Cubase Audio too?
Do you have the 1MB or 2MB card?
Which resolutions do you run mostly?
Since I concider buying a NOVA, I'd like to know as much as possible.

Best regards,

Of course, you first have to rename the file to an extension ".APP" or
".PRG".
Also you forgot to define or defined a wrong standard editor.
Do you have a manual? Look there how to define the standard editor.

Hello! I am selling Word Perfect 4.1 for the Atari ST. This is the 1989 version so I believe the documents saved with this can NOT be read by the IBM version of the program. It works perfectly well on floppy disk format (I believe all the disks are 360K) but a hard drive is strongly recommended by me and the company. It has all the disks and the instructions. It doesn't have the warranty cards, function key cheat card, and the case for the instructions. I am asking only $20 + shipping for this, which is a good deal I believe. I am NOT going to waver much with the price because I have bills to pay (along with college). If interested please leave me e-mail at richardw@dma.org as soon as possible. This is in Ohio!

So what will work better, not having any boot sector at all? Most of the time a disk formatted 80-9 on a formatter will work on a PC. There were a couple of times when someone said that she couldn't read any of my floppies on her PC. I formatted then on M-Disk and they work great with all the PC's I used in school.

I hadn't found out on how the MS-DOS boot sector really 'works' until recently, so I do need some info. Thanx for catching me with my pants down, time to get a belt then. :)

The SLM 804 has no internal memory, so you need to dedicate an ST as a print server. I would suggest using an ST With a minimum of 2.5 megs of RAM. Connect the SLM to the ST using the supplied DMA interface; connect the ST to the PC using the serial port (maximum speed without a hardware modification will be 19200 bps). Then run a terminal program on the ST that will accept input from the serial port and dump it to the printer on the DMA bus.

Frankly, it's a lot of work, and will give you VERY slow results. You can get nearly the same quality, and a good deal more speed, by picking up an HP Deskjet printer for the PC. You should be able to get US$100 (possibly more) for your SLM 804; that will cover a Deskjet found at a yard sale and probably some extra ink cartridges as well.

It's a bit of both. There are scanners that connect via SCSI (Mustek makes
a rather nice one), and there are scanners that use a cartridge-port
interfce (Michtron made a couple, and the actual scanner head is an
industry-standarad hand scanner). I'd suggest you take a look at Nima
Montaser's web page (don't recall the URL offhand but it's listed under
"Vendors" on my bookmarks page) to find software for various flatbed
scanners. Since my wife has decided she needs one for her PC, I'm pushing
for the Mustek. <G>

Actually, it's not the drive itself, Tony, it's usually either the
controller or the MS-DOS software itself. Some (very few) PC flopyp
controllers will support "odd" values of sectors/track and more than 80
tracks, but most will not due to the BIOS chip on the system motherboard or
on the controller card. PC BISO developers often catch a disease from
close contact with MicroSoft products, and this disease causes them to
assume that they know what is good for you better than you do. ;^)

The drives are often limited to 80 or 81 tracks, but the number of
sectors/track is not often a problem. I use PC drives on my Mega STe and
on my 1040, and have no problems - even with Dungeon Master.

Off topic I know but you may not realise this but the SEQ format
invented by Jim Kent is an early version of the FLC format that he
invented for use in AutoDesk Animator.
Also 3D Studio on the PC is a much developed version of CAD3D2 and
CyberSculpt, all by Tom Hudson.

Rich.

AFAIK, the Atari laser printers are proprietary pieces of hardware for
Atari computers only.

>Is this true?
Yes to 040 boards, and I have heard that the 060 is in development, so it
may also be available now!
>Can I buy a new Atari computer today?
Yes, but there are very few "in stock" computers left! Best bet may be to
watch here for someone selling one!
>Do commercial software developers still support the platform?
Yes, some developers of high end software are still supporting the Atari
line, mainly the Falcon computer.

>Are Atari clones available?
Yes C-Lab offers the Falcon Mark II all setup for music applications and
just about everything else too! Then there are at least 3 other high end
clones on offer 2 from Europe and 1 from Canada, these are more along the
lines of the Atari TT machine with a much more open architecture, so
depending on the cards and processors installed these are pretty much top
of the line for a small graphics business and a heck of a lot more
besides!

> > Thought you all might want to know. What with "ST NEWS" having folded a
> > bit more than a month ago as well, it seems all we have is "Maggie"
> > when it comes to high-quality oldies. Good luck to them!

ATARIPHILE:
Now at issue 3, an excellent diskzine with writers of many years experience, including ex ATARI ST Format and ATARI World journalists,The content is all ATARI, in HTML format and a top class production, Appears on a "when its ready" basis as from Issue 4,

ST+ :
Now at issue 8, this disk magazine has a slight advantage over the rest as it is released monthly, therefore more up to date and knowing exactly where and when you can get a disk mag is a plus, heavy ATARI content, some other bits,

STOSSER:
Now at issue 27, another released on a "as and when" basis, originally for the STOS coding community but forced to spread its wings into the whole atari community,

MAGGIE:
One of the oldest and best written disk mags, took a while to shed the bad name it once had, but under the guidance of Chris (CiH) it is now considered one of the best, releases are sparse throughout the year, maybe every quarter if your lucky,

ST Highway:
ST Format just had time to review this disk mag, they did IMHO a sad hatchet job on it, most diskzines will struggle at issue one and need support, not slagging, now at issue 3 it is much improved and if staying on the same track will give the rest a run for there money,

There are quite a few more diskmagazines,I cannot remember all there names, but the above are alive and kicking, I would say another 4, maybe five live disk mags,

DBA will be missed, but certainly not by me or any other ST user as we did not have access to it, we used to?, I used to look forward to my copy, but then they went Falcon only and deserted the ST, so Falcon owners are the only sad ones about this, I was sad at the time it left the ST,

ST News, another long standing diskmagazine,From Richard karsmaker, this used to be the top disk mag, but when the majority of the content went away from atari and moved towards music and films and books, then it lost its appeal to the majority of ST users, sad to see it go

though,
Cheers.............!ynoT

Posted and mailed:

The existing MMU and GLUE should be fine. You'll need a utility to explicitly turn the blitter on, I believe, and I don't know where to look for one; that's included in TOS 2.05 and later, and I don't have a blitter in my TOS 1.04 ST (yet) so I have no direct experience there.

One of the unlucky few? There _are_ Atari related companies out there that
don't screw their customers? Even Migraph did the above to me. I got a
defective scanner from them. Fixed half of it myself, sent the broken part
back. I'm counting on 2+ years, and they never sent me nothing back. NOTHING.
And Migraph is a pretty good company, compared to some I've dealt with! :)

I am still an Atari fan, though. :) I'm just real careful of who I deal with,
and really have all the software I need. Other than a few shareware items.

Badly? Most ported software works exactly like the original unix version which is, in my opinion, a good thing. The good thing about mint is that unix stuff is relatively easy to port to it. If you are talking about making gui interfaces to unix stuff you should bear in mind that it would increase the porting time substantially, and a lot less would be ported.

>And I'd really like to know NOW*, I'm antsy to get a 'real'
>newsreader... :)

Hate to tell you this, but you need to grab the Network package also
to get your news reader going.

BACK UP YOUR HARD DRIVE! BACK UP YOUR HARD DRIVE! BACK UP YOUR HARD DRIVE!
(Have I made myself clear?)

Make sure you have a Multitos directory on your boot drive.

Once you get that, plop everything in one directory except the install
section. Uncompress the install section and place the contents on a
floppy disk. Remove all auto programs and accessories from your boot drive
except what is needed to start your system (e.g. boot selector, etc...).

Reboot clean (no ACCs, minimal auto programs).

Run the install program from the floppy.

Now, I -think- the first thing it asks for is your boot drive (usually
C:). After that, it should ask for the Minix partition drive (E: in
my case) and various parameters. It'll ask in English if you're sure
you want to do this because it'll trash whatever is on E:.

Once it's created the Minix partition, it'll ask for the location of
the sections you want to install (Basic, Network). Type the path and
take a break. It takes a while.

You'll end up with a shell. You need to copy over several files to get
MintNet up and running, and re-name a couple of files (which should
be fairly obvious from the install directions).

Anyway, all of this is from memory, which is failing me in my old age
(29 tomorrow). If you have specific questions, you can email me.
Try me at michael@why.net, too.

From: mdf16@zimmer.csufresno.edu
Message-ID: <51segn$evd@zimmer.CSUFresno.EDU>
Source record: 137589

Hi!

I downloaded TOS 4.92, and it does load off of a Hard Drive. Unfortunately, once it's in the computer, I haven't been able to access the hard drive. Is this what you mean by saying it doesn't boot off of the hard drive? It loads in fine, and I can use everything except the HD. Only floppy drives are displayed on the desktop, and Install Devices doesn't do anything. Could I possibly just be putting the programs in the wrong order with respect to my HD driver, or does it just not like the hard drive? If I can't use the hard drive, it's not of much use to me, because that's where all my heavily-used software is. Other than this it has some pretty nice features that I'd love to be able to use! Any suggestions? Am I just out of luck?

>XWindow, GCC ...

Argh! I just downloaded the complete TAF package a few days ago and managed to (with a little friendly help and a few problems) install it.
I'm now trying to figure out how to use the whole thing, how to interface it all with the GEM environment etc.

Can I add all those extra things later if I want to? How do I do that?
I'm already in the process of downloading "Lynx" (the text based web browser)- not so much to do online www with it as my provider has Lynx installed in UNIX- which is a much better/easier solution, but to check out my web pages before I upload them.

Anyway, I've heard that the "CAB" browser works with MiNT and a PPP connection (which I have access to), and I've downloaded the "cab.ovl" for PPP... but I have no idea where to start.
Also, I'd like a decent text editor, and the one I'm used to is Emacs- is it available for MiNT?

TAR, GZIP & COMPRESS are all widely used on Unix platform, and are the standard for Unix based archives, compression and programs/data distribution. So if you guys want to use a Unix-like OS, be ready to use more of Unix style programs. Of course there are ZIP/ZOO/LHARC on Unix platform.

Wait till you have to use VI to edit your configuration files, but of course you will not use VI but a GUI which will slow down MiNT. I tried using the GUI to UNTAR/GZIP several of the software distribution (PPP/MiNTNet/VI etc) when I was installing, but gave up as it was relatively slow (my HDD light was on a flicker and off for 3-4 seconds per cycle). I rebooted, switched to command line using tcsh and UNTAR/GZIP them in the background, I notice that my HDD light was flickering with activity, the off cycle was less than a second. All these in the background & I was reading a doc.

So don't give up on installing MiNT and all the components, it's really powerful once you configured it correctly (& if you have the time).

As for ZIP, it is widely used on MS DOG/Wintel platform...

: Can anyone outline the benefits of 4.92 versus 4.04?

My recommendation is that you download and try it. There are many features of TOS 4.92 that will make it worth the download and subsequent frequent usage of. I use it if I'm not using Linux or MagiC. It's faster, has more features, and fixes a lot of the bugs that 4.0x has. (IT also allows multiple drag and drop to a program (i.e. text to a wp or pics to a graphic program)

>IF THERE ARE ANYBODY HERE CAN KNOW AN EMULATOR CAN SUPPORT THIS FORMAT
>PLEASE HELP ME AND SEND ME A MAIL !!!

The problem is PC floppy drives. Most of them cannot read 10 SPT disks.
With STonX (another ST emulator that runs under Unix) I was able to read
Some 10 SPT disks, but not very well.

It might be possible to make an image of these disks on an ST and use
the disk image with an emulator that will support Disk Images.

Some other reasons for incompatibility are copy protection and programs that
rely on precise timing and need a 8mhz 68000. (Spectrum 512 and similar
programs, for example)

There is no real 256 color mode on ST's. Spectrum, Photochrome, SOL,
Quantum Paint, etc. Use special programming techniques to
achieve the extra colors, and converting GIFs to a format suitable for these
tricks is time consuming. I don't think you'll find a satisfying GIF
slide show w/ extra colors for the ST. My best advice would to be convert them
to photochrome and use the photochrome slide show.

TTs and Falcons should have slide show programs to display 256 color GIFs
more easily.

: Can anyone tell me of any way, either software or hardware, that an Atari
: SLM 804 Laser Printer can be used to print from a 386/486/pentium platform
: using either DOS or Windows. Any help would be appreciated. Thanks.
:

Well...about the easiest way I can think of...actually the only way
I can think of...would be to get your hands on a really cheap used ST
and shoot the data to the ST from the PC using a null modem cable.
You'd have to write some software that would take the info sent to the
ST and pass it on over to the Laser Printer.

The Atari Laser Printer uses Atari DMA...
This means you really need an ST, STe, TT, or compatible to
use the Atari Laser Printer. This is really fast...as it goes
straight from the computer's memory to the printer and doesn't require
a serial or parallel type transfer. In addition, this means the
printer itself has no internal memory...another reason why getting
a cheap ST somewhere is your best bet. For best results, find an
ST with 2 megs or more...but a minimum of 1 meg.

It'll be tricky to get this printer to work with your PC..and will
most likely require an ST computer somehow networked to the PC.

Good luck,
Brian

William Wong (wongck@ti.com) wrote:
:
: TAR, GZIP & COMPRESS are all used on Unix platform, and are the standard
: for Unix archives, compression and programs/data distribution. So if you
: want to use a Unix-like OS, be ready to use more of Unix style programs.
: Of course there are ZIP/ZOO/LHARC on Unix platform.

It is a unix like OS that is MUCH easier to use with GEM frontend...

: Wait till you have to use VI to edit configuration files, but of course
: you'll not use VI but a GUI which will slow down MiNT. I tried using the GUI
: to UNTAR/GZIP several of the software (PPP/MiNTNet/VI etc) when I
: was installing, but gave up as it was slow (my HDD light was on a
: flicker and off for 3-4 seconds per cycle). I switched to command
: line using tcsh and UNTAR/GZIP them in the background, I notice that my HDD
: light was flickering with activity, the off cycle was less than a second. All
: these in the background & I was reading a doc.

I'm aware of how GEM can slow MiNT, but I'm no unix guru. Command lines
are NOT my favourite thing. I believe that a lot of unix software ported
to Atari has been ported badly...

: So don't give up on installing MiNT and all the components, it's really
: powerful once you configured it correctly (& if you have the time).
:
: As for ZIP, it is widely used on MS DOG/Wintel platform...

I haven't given up. Its just that Tar.ttp has f...ed up my work drive! :(
I know what MiNT is capable of, but think that it is too unix for your
average Atari user who is used to GEM. A PPP based web browser would be
simple if MiNTnet was compiled to work under MagiC or single TOS, yet we
have to endure a complicated pig of a setup that chews RAM like there is
no tomorrow and slows our machines to a crawl. I've seen some pretty
clueless people install Netscrape on the PC, and when you consider how
complex a beast Netscrape is then it makes you wonder how most of these
people ever accomplished the task. The answer is in the fact that they
only need to know a little bit about internet protocols etc...because
MOST of the work is done in an environ they are familiar with
ie..Windoze. I HATE the PC, but don't you think we could learn from its
example? You have a similar dislike for M$-anything that I have, but you
seem to be dead-set against anything related to the PC. Instead the PC
gets more and more powerful software that (in most cases) gets easier and
easier to use. MiNT and MiNTnet are that powerful, but they are so
difficult to use that it scares many (me especially) people away because
it is so complex.

I think that guys like yourself are well meaning in your dislike of the PC, but are scaring others away from Atari because of your insistence on making things so different (and difficult I might add). Time for a reality trip I think...

Taking 5 minutes to read what follows can change your life :

I saw an article in an internet newsgroup telling me I could
make $50,000 within a month for an investment of only $5.

I thought it was a huge joke. But remember.....
For only $5 to invest, you have the chance to get
money, money, and more money... $,$,$$$$$$$.....

All you have to do is:
but a $1 note in an envelope and mail it to the adresses
(with the words: please add me to your mailing list)
listed below. After that, delete the frist address, let the
other addresses rise up, so #2 become #1, #3 become #2...
and put your address on place #5.

REMEMBER: for only $5 !!!! the chance to become $$$$$$$$$
and more $$$$$$, but this only works, if you really send
the money to the 5 people... !!!!!!

okay, after you have done this, begin posting your text in
200 newsgroups (there are about 17000, so there is chance !)
Two weeks later, it began receiving money in the mail!

5. Sebastian Draese
Hauptstrasse 31
D-79588 Efringen-Kirchen
GERMANY,Europe

Lets review why you should do this. THE ONLY COST IS $5, AND 5 STAMPS, AND 5 ENVELOPES. Anyone can afford $5 for such an effortless investment with such SPECTACULAR RETURNS.

Some people have said to me, "what happens if the scheme is played out and no one sends me any money? "Big Deal, so you lose $5-but what are the chances of that happening ?? Do you Realize that NOBODY cares for the LEGAL chance of winning such a BIG money as 50,000.00 $$$$???? and all for a microscopic investment of five separate dollars? just think of all of the new Internet users that join the net every day!!!

There are millions of internet users, and millions of new net surfers every month !!! This is the great plus of the Internet, people all over the world can hear you and listen carefully if you talk reasonably. Everyone will take that chance ! I agree, If it wasn't the Internet, and was a small circle of people, the chance wouldn't have been so small. the amount of money had to be 200 times bigger, and the chances were zero. It wouldn't succeed.

But here, on the Internet, it is a giant village, where new thousands of members join in every day ! you CAN'T lose !!!!

Remember- read the instructions carefully, and play fairly. That's the only way this will work. Get a printout so you can refer back to this article easily.

Try to keep a list of everyone that sends you money and always keep an eye on the postings to make sure everyone is playing fairly. You know where your name should be.

REMEMBER-HONESTY IS THE BEST POLICY. YOU DO NOT NEED TO CHEAT THIS IDEA TO MAKE MONEY!! BESIDES,NOT PLAYING THE GAME FAIRLY IS ILLEGAL.SO LET'S BE REASONABLE AND PLAY FAIRLY,SO WE CAN ALL ENJOY THE INTERNET GOLD MINE.

GOOD LUCK FOR YOU ALL, And remember, play fair and you'll win, I don't want to mention what might happen to those who won't. AND AGAIN,SEE YOU NEXT TIME WITH SOMETHING YOU WANTED FOR A LONG TIME !!!

I've been through a few harddrives over the past 3 years, using cubase
audio. " years ago, I bought a Micropolis 1.7 gig av drive, it works
perfectly, it's surprising how soon you can use up 1.7 gig of drive space,
for audio files. So a couple of months ago I bought an Iomega jaz 1 gig
removable, it's great and is the one i'd reccomend for hard drive
recording, it's as fast as the micropolis and if ya need another gig ya
just buy another platter for a bit over a hundred bucks.
If you do choose the Iomega, you need to use hd driver 4.63 or later, or
icd pro6.5.5 (which are fully ahdi compatible) and configurable. You
really need to run one of thes drivers anyway for large drives and hd
recording.
Another good idea if you use cubase audio,and own a dat recorder, is to
get a prg called data dat, by soundpool, the dat b/u prg that comes with
cubase only backs up aif files ,not your song files. Datadat backs up all
and any of your files, you can back up whole partitions.
Hope this helps. __

SUBJ: Magic4 and .GTP programs - problem!

g> Does anyone know how to make Magic4/MagxDesk recognise .GTP files as
g> executable programs?

As a workaround, rename it to an .APP, and press control as you double click
to run the file to get a command line.

Or alternativley, to get a command line each time, rename the .GTP to .APP,
highlight the relevant program, go to MENU - OPTIONS - INSTALL APPLICATION,
and click the TTP button.

g> Whenever you click on a .GTP program, MagxDesk doesn't think it's a

Newsgroups: comp.sys.atari.st

j > Does anybody have or know of a sysex editor/librarian, that
j > runs on a falcon, without having to use st res.

I'm using X-Or on my Falcon in 640x480 2-colour mode; it works well in that resolution. I believe Mark of the Unicorn still handles the Atari version of X-Or 2.

E-Magic's Sound Diver should work nicely on a Falcon, as it's designed to interface alongside Logic (and it can use the MIDI ports on the Log3 dongle).

Hi Daniel,

I own the Mark of the Unicorn version of X-OR. Every time I try to run it (in Geneva or from the desktop) in 640x480 2-color mode I get a "program does not run in med. res" response. It runs great in ST high mode. I would sure love to have in work in Falcon res because I could really use the extra monitor real estate.{G}. Do you have any extra software or hardware that's making this possible? I'm using a stock 4 meg 4.04 falcon with a sony multiscan monitor.

hiya,

at this point of the debate, Tom Lamparty <Lamparty@concentric.net>
raised the following issue:

>One of the points that irritate some people is that it is a catch 22 sort
>of situation! You need Mint to run gtz and Mint itself is GTZed

that's not quite true. you only need a good shell. for instance, i've been
using CRAFT (GPshell) for yrs. so i ftp'd gtar.zip and gzip from
cnam (/pub/Atari/Archive i think) put it in the bin directory, and
used it and used it etc...(sometimes it gives error messages pertaining
to the absence of unix-type rights on a TOS Fs, just ignore them !)

You can also use Gemini's mupfel. or any other command-line shell.

but then i've been working on unix platform for years so, maybe i'm biased
here.

[minimal how-to follows]
basically, for extracting a tgz (or tar.gz) all you need type
is gzip -d <filename.tgz> [or gunzip <filename.tgz>] which replaces
the filename.tgz by a filename.tar, whichthen can be untar-ed with a
tar -xf <filename.tar>

with gtar, "gtar -zxf <filename.tgz>" should be sufficient.

cu

fab.

If your friend is already dead, and being eaten by vultures, I think it's
okay to feed some bits of your friend to one of the vultures, to teach
him to do some tricks. But only if you're serious about adopting the
vulture. --Jack Handey

From: mcandrew.d.w@nort.bwi.wec.com
Message-ID: <DxzuA9.3nt@tron.bwi.wec.com>
Source record: 137709

Well, Uwe. I am slowly coming around full circle back to my hardware setup. So far, I can't find any other reason (s/w) why my version of HD Driver 5.12 shouldn't be seeing my Jaz at the same time it sees the rest of the drives (ide #0 boot-drive COnner, SCSI#0 - 270SQ Syquest, SCSI#1 - Jaz, SCSI#4 - Toshiba CDROM, SCSI#2 - Epson Scanner).

The thought occurs to me that I may have miscommunicated my correct device id's before. The above is the correct layout. In fact, due to other circumstances, the additional thought occurs to me that perhaps I need to change where the end-of-chain termination might be?? At the moment I am not positive just where I have that. I think I have the CDROM jumpered for termination, although physically the scanner is at emd-of-line.

No matter the outcome, I recently learned you have 5.6 as the latest version that is (about to) hitting the streets. Even if it's not THE answer to my specific situation, I'd be happy to forward my disk to our North American update/distributor to upgrade to this version.

Of course, I'm always open to more suggestions.

Danke sehr.

5002. FS/T: Atari ST software [09/20/96]

Newsgroup: comp.sys.atari.st
Date: 1996-09-20 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <51uvkb$n22@sjx-ixn6.ix.netcom.com>
Source record: 137460

If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it). Also, please be sure to read the entire message carefully before you ask me any questions. This will save us both some time. Thanks! -- MJN

*****

All VGA FS/T lists are updated weekly and are available on the WWW at http://www.io.com/~vga2000/

This list was last updated on 09/16/96

I have the following Atari ST software for sale or trade.

Unless specified, all items are *NEW* and are still shrinkwrapped.

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3 for the first item and $1.25 for each additional item, unless otherwise listed. If you order enough items I can weigh the order as a package, which might reduce the shipping costs.

Large orders will be weighed as a package, to reduce shipping costs.

SALE CONDITIONS:

1) Sales are first come, first served. Please include your full postal mailing address in your reply.

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be given priority (especially if the trade offer overwhelms me). I collect for over 40 different systems, so please feel free to send me a trade list. Ask for my want lists!

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money order, drawn from a U.S. bank branch. Orders from outside the U.S. are also accepted.

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

SOFTWARE:

ATARI ST COMPUTER:

New diskette(s) [still shrinkwrapped!]:
$ 9.00 Arkanoid (Taito)

I can see using Magic for the emulators. Why pay $60 for TOS(even to get
a image copy of), $60 for Geneva, and more money for a desktop when all
this stuff overwrites the $60 TOS anyways?

That said, using Geneva on a "real" ST computer is a good deal. Heck,
even the demo which I have is great. I only use it to play GEM games,
some accessories, and it looks so cool. It really makes TriYahoo shine
and even the old game Rogue looks awesome! :)

Without knowing the type of account it is difficult to be specific.
For this reason I recommend the POP version of Nos. It will do SMTP
email and POP email plus news, FTP and telnet. It does not allow web
browsing but provided she can get news and email all the required help
can be obtained here. This is based on the assumption the ST has at
least 1Mb ram and a hard disk. Without a hard disk a shell account
would be more viable as it would require a comms program only.

I would strongly suggest you pre-install it as much as possible for
her if at all possible, especially if she is new to the net because
the Nos docs are outdated and the outdated examples are worse than
none at all.

Oasis135 is a GUI offline reader which comes with Nos. This makes
things easier to setup. The Nos version is 0.42 which will *not* do
POP accounts. If this is required just overwrite nos.prg with the pop
nos version.

>Can anyone help? Obviously, I could get the software by email, but it
>would need to be in a format I can decompress/read on my mac. I can handle
>MIME attachements, binhex, .zip, and lots of others (Stuffit Deluxe does
>all the unix crap like .gz and .tar).

uu-encoding is the preferred (easiest) method of encoding employed on
the atari. ESSCODE will do other formats such as Mime but sometimes
you have to manually cut bits off the header which is not going to be
any help to a new user!

>And I know I've seen a utility somewhere for my mac that lets me mount
>and format ST disks. Anyone recall the name of it?

If you format to the old PC 720K standard, the ST will read them.

>
>Anyway, I'd really appreciate any help here. I always loved Bertha, my old
>trusty 1040ST. I should have kept some of the games and ran 'em under

>emulation on my Power PC.................

This may be a red herring but might be worth investigating. If there is a MagicMac demo you might be able to use that to gather the software and check it runs provided the demo is not too restricted. I dont have a Mac so I haven't a clue if this is viable - but if it is it would enable you to send her a "near as damn it" pre-installed setup. :-)

Before you critize someone for write a program that runs on the machine
that he has! Try writing one for a machine that you don't have! Part of
the debugging process is to run it and see what fails! You can't run it on
a Falcon if you don't happen to have one! If you have to depend on someone
else to try it for you this makes a process that would take a couple of
second and makes it last at the minimum several hours while yu pass e-mail
or phone calls back and forth and try to figure out what went wrong by
your friends description of it! It gets very frustrating! to say the
least! of course if anyone wants to give him a Falcon to test this stuff
on I'm sure he would be delighted!!!

Let me tell you something, Mr.Craig:
I've only had 2 problems with atari users, and you are the second one.
I will not say who was the first one because it's none of your
business, and I don't want to annoy this person.
I hate when people jump into a conversation and says no it is
wrong..
You took the first statement the wrong way, and you still don't want
to understand because you ARE A CODER, and a GOOD one apparently. SO
probably too proud to check the original archive. Who knows.??
Anyway, I am more than happy to be in your killfile, who cares, I
don't have a killfile and always open to talk. ;)

p.s. by the way, buy some modesty in your freetime.

Ok, once again, I'm sorry that you've had all these bad experiences. I
haven't had very many of them. Ok, maybe III am one of the LUCKY few. All
I know is that I haven't had such a hard time with companies as you have.
No hard feelings, ok?

>I am still an Atari fan, though. :) I'm just real careful of who I deal
>with,
>and really have all the software I need. Other than a few shareware items.

Cool! Glad to hear it! I tend to rely pretty heavily on shareware as
well. It's faster and cheaper than mail order or running down to the last
remaining store who reluctantly carries some OLD ST software. It's
usually some pretty good quality stuff, too! Hats off to all the awesome
shareware programmers out there! Well, once more, I honestly am sorry
```

that you've had these awful experiences, and I hope you don't let that get you too down! I hope you continue to enjoy your machine and/or other machines in the future!

Source record: 137474

I've heard that v3.0 of RATSoft BBS software is near release...I've also heard that it will allow multi-phone line support. Does anyone have some solid info on this? When? Where? How much? If it does support more than one phone line, how does it do it? (extra serial ports on TT/Mega STe or 2 or more networked machines?) Thanks in advance for any info...! :)

Having written a good deal of those posts, I stand by them. I toasted my
hard drive by trying to re-partition it, which was pure stupidity on my
part, and had absolutely nothing to do with Mint/MintNet/etc. There _is_
a minimum level of technical knowledge necessary for a successful
installation of Mint/MintNet/etc, but that minimum is not as high as many
seem to believe. As far as I can tell, all you have to be able to do is
ftp, run gunzip, run tar, copy files, edit text files, and follow written
instructions. Of course, being able to make good guesses as to what
you're supposed to do doesn't hurt at all :)

What version of the ICD drivers are you using? On my Tos 3.01 TT, the ICD Pro drivers v6.5.5 definitely _did_not_ like either minit or MinixFS. minit exited saying something about rwabs (don't remember; it was a looong time ago). When I switched to AHDI to run minit, formatted with minit, and switched back to ICD, I was unable to access my MiniFS partition...

: ZFC,. Anyone knows??

Well, I seem to remember Annius V. Groenink asking that the full version not be place on any other server, so that people would have to download it from him. I'm not sure why. Maybe he wants a count of how many people get it. But as things stand now it won't be an accurate count. I've already tried downloading it twice, for example, because I have had this difficulty extracting it.

ccrok@netway1.mdc.net wrote:
: Does anyone know of a program for the ST or IBM that converts GDOS/GEM
: to either TTF or postscript?

If you are talking about Speedo GDOS fonts, Bitstream owns the technology behind them and, as far as I know, no one has licensed that technology to do the conversions. Most of the Speedo fonts available came from Bitstream in the first place, and they themselves have release the same fonts as PostScript and TrueType at priceslow enough and quality high enough it would make no sense for anyone to try to compete.

If you are talking about the original raster GDOS, as these fonts are not outline fonts. The best thing to do would probably be to load the largest size you have of each font into a program that converts raster art to outline art. I don't know what is available on the PC platform, but some on the Atari platform, like Avant Vector, will even recognize that it is a font you are converting and can save out in various font formats.

I have for sale a 1040ST. It currently has a SS drive, but I can include
a PC-style DS drive if you want. (and maybe even install it for you...)
Also will include a mouse and/or power cable if you want. Make offers.

To properly use the Blitter, you must* have TOS 1.2 or newer. TOS1.0 does
not know about the Blitter. You do not need extra software to turn the
blitter on/off, TOS 1.4 (and probably 1.2) will add a "Blitter" option to
the end of the "Options" menu on the desktop if it sees a blitter chip is
installed. I think TOS 2.0 and newer just grey out the "Blitter" option.

> RT> desktop install application procedure.
>
>Hehe, whoops, I stand corrected.

I too, would recommend that you use the desktop install option in most cases (on TOS 1.04 and up) but there are exceptions...I run a BBS with BBS Express! ST with a Mega 4 ST/TOS 1.04/Adspeed/ etc,...and if I run Express from the desktop install option (autostart) then the CPX'x and ACC's don't have time to initialize properly so I use the companion to STARTGEM, STARTPRG...this I install from the desktop to auto run, then it autostarts Express after 10 seconds (you can configure the length of time) and bang! problem solved...Between STARTGEM and STARTPRG, you can autostart darn near any program even on pre TOS 1.04 Atari computers... Hope this helps a little! :)

PS My BBS is The DarkForce! BBS @ 1-606-886-9014...Call sometime! :)

>Quantum Paint, etc. Use special programming techniques to

yes yes i know <smile> I know all about the ATARI 16 colours, believe
me I know :),
But I also know it is possible to get around the problem, as some of
the programs you mention can do,

>achieve the extra colors, and converting GIFs to a format suitable for these
>tricks is time consuming. I don't think you'll find a satisfying GIF
>slide show w/ extra colors for the ST. My best advice would to be convert them
>to photochrome and use the photochrome slide show.

but photochrome is one of the programs that can show 256 colours
pictures, I already stated it doesent have to be gif, but photochrome
IS NOT A SLIDESHOW PROGRAM!!!
I am looking for a slideshow program, not something the user has to
figure out, or set up, or decide anything, just a slideshow!!!

>TTs and Falcons should have slide show programs to display 256 color GIFs
>more easily.

I also stated I wanted something for the ST, I know the falcon can do
it, I presume the amiga,pc and acorn can do it, but i am looking for
ST software <?>

The BIG BIG question is (STILL) if photochrome and others can get
around the 16 colour problem and show pictures with 256 or 24bit true
colour etc etc on a bog standard STFM, (which is possible) then why
not a simple slide show that does the same thing,

I am looking for a slideshow that shows pictures in at least 256
colours, for the STFM,
Not for the Falcon or any other machine, not a picture converter such

as photochrome or SOL, just a slide show ?

CAN ANYONE HELP PLEEEEASE , I will be amazed if there is no such
thing ???????????

<SMILE>

Cheers.............!ynoT

Message-ID: <32439C66.46E@owens.ridgecrest.ca.us>
Source record: 137487

It's probably been out a while, and I just pulled my
head out long enough to see it, but WOTANOID for the
Falcon is very cool.
I'm one of the idots that could play the old astroids
for hours at a time.
This is like candy for a 40 year old :)

Mike

Ran under my Falcon on a multisync (15.75 scan rate)
Had to boot using control key. I have about 2mb worth
of autofolders and acc's so I don't know which one
conflicted. File was from CNAM ftp site. Falc/games.

>>slideshow,
>
>There is no real 256 color mode on ST's. Spectrum, Photochrome, SOL,
>Quantum Paint, etc. Use special programming techniques to

yes yes i know <smile> I know all about the ATARI 16 colours, believe
me I know :),
But I also know it is possible to get around the problem, as some of
the programs you mention can do,

>achieve the extra colors, and converting GIFs to a format suitable for these
>tricks is time consuming. I don't think you'll find a satisfying GIF
>slide show w/ extra colors for the ST. My best advice would to be convert them
>to photochrome and use the photochrome slide show.

but photochrome is one of the programs that can show 256 colours
pictures, I already stated it doesent have to be gif, but photochrome
IS NOT A SLIDESHOW PROGRAM!!!
I am looking for a slideshow program, not something the user has to
figure out, or set up, or decide anything, just a slideshow!!!

>TTs and Falcons should have slide show programs to display 256 color GIFs
>more easily.

I also stated I wanted something for the ST, I know the falcon can do
it, I presume the amiga,pc and acorn can do it, but i am looking for
ST software <?>

The BIG BIG question is (STILL) if photochrome and others can get
around the 16 colour problem and show pictures with 256 or 24bit true
colour etc etc on a bog standard STFM, (which is possible) then why
not a simple slide show that does the same thing,

I am looking for a slideshow that shows pictures in at least 256
colours, for the STFM,
Not for the Falcon or any other machine, not a picture converter such
as photochrome or SOL, just a slide show ?

CAN ANYONE HELP PLEEEEASE , I will be amazed if there is no such
thing ???????????

<SMILE>

Cheers.............!ynoT

>Hehe, whoops, I stand corrected.

I too, would recommend that you use the desktop install option in most cases (on TOS 1.04 and up) but there are exceptions...I run a BBS with BBS Express! ST with a Mega 4 ST/TOS 1.04/Adspeed/ etc,...and if I run Express from the desktop install option (autostart) then the CPX'x and ACC's don't have time to initialize properly so I use the companion to STARTGEM, STARTPRG...this I install from the desktop to auto run, then it autostarts Express after 10 seconds (you can configure the length of time) and bang! problem solved...Between STARTGEM and STARTPRG, you can autostart darn near any program even on pre TOS 1.04 Atari computers... Hope this helps a little! :)

PS My BBS is The DarkForce! BBS @ 1-606-886-9014...Call sometime! :)

Wouldn't be the fastest way, but if you use photochrome to convert them to
pcs files then you can use the photochrome slide viewing program!

Before you critize someone for write a program that runs on the machine
that he has! Try writing one for a machine that you don't have! Part of
the debugging process is to run it and see what fails! You can't run it on
a Falcon if you don't happen to have one! If you have to depend on someone
else to try it for you this makes a process that would take a couple of
second and makes it last at the minimum several hours while yu pass e-mail
or phone calls back and forth and try to figure out what went wrong by
your friends description of it! It gets very frustrating! to say the
least! of course if anyone wants to give him a Falcon to test this stuff
on I'm sure he would be delighted!!!

Is there any way to convert a video signal (composite of S-Video) to
the flavor of RGB used by a ten year old color ATARI ST monitor? I'd
like to get some use out of this ancient thing sitting around :-).

F > it to CS04 and now I cannot delete it, rename, view, etc, the
F > Falcon (TOS 4.04) says: "this application cannot find the
F > file..." not even Diamond Edge is of help.

Ya, I've had trouble getting rid of women too...

Ahm. Anyhow. Just receintly I renamed a file with the [S]how info, and I had the same problem. Turned out I had renamed it to, for example, 'CS004. JPG' (notice the space, & 4 characters after the period). Anyhow, the file showed up as 'CS004.' but after looking into the directory with Edit Plus, I found the '. JP' extender. I got rid of that extender, and everything worked again.

Since I _don't_ know what I'm doing, I hate to recommend anything here. Diamond Edge found no problems for me, either. Edit Plus rescued me (once again!) but be real careful messing around with file directories - everything can go away for you! :)

Hang on, though. The software that get's .tar.gz'd isn't necessarily
'techie' software. I don't see why perfectly ordinary software should be
withheld from people who realise their limitations and won't attempt to give
themselves the problems that you describe.

g> Hmm. This doesn't work :(I get a dialogue saying C:QED.APP not found.

It's trying to load the selected file directly into the installed editor.
Examine the Utilities category in the Options/Preferences menu option of
MagxDesk - that might explain summat.

This editor can be invoked at any time with Ctrl-E or you can select several
files from different windows with shift-clicks and then double-clicking on
any one of them with the Ctrl key held down will load them all simultaneously
into the installed editor, if it supports multiple file-loading (eg Everest,
7-Up, QED...)

g>
g> Excellent! This works brilliantly! Cheers Harry :)

Call it a lucky guess <g>

Interestingly (or aggravatingly depending on your pov) if youhave Autosave Preferences selected in Options/Preferences, this command line will be saved into MAGX.INF and can be saved as a standard parameter line if there's a GTP that you use frequently (or even exclusively). Saves a lot of typing!

Now that I've got you, you can do me a favour too. See Email... <g>

My comments weren't so much directed at this Mint archive as the plethora of other standard utilities that are also forced into this format.

I still don't quite see how someone would start on the Mint trail if they've got to get past this format. It's all so unnecessary and without any real justification ISTM.

g>>> as executable programs?
SS>
DC>> Presuming that you get as far as a dialogue box asking for
DC>> parameters then that's what it should do - Gem Takes Parameters.
SS>
SS> You missed the point matey, Magic dont recognise it as an executable,
SS> and so send it to the viewer, you wouldnt ever get a dialouge.
Ah, right, that makes sense (of a kind!) (g)

DC>> I ran the Ghostscript .GTP file by renaming it to .PRG.
SS> But you couldnt pass a parameter then could you?
No need to IMHO, you get a GEM prog if you do this with a nice file menu to
click on.

Speak to 'ya later!

You're right. I seem to remember that the SLM 804 used the internal RAM
of the ST to build up an image (hence you needed a 2meg+ machine). (This
weirdness was done so the printer would be cheap, I think - RAM prices
were very high at the time).
Most 'generic' laser printers in contrast have on-board RAM for this
purpose. I suspect it'd be nect to impossible to find/create a PC driver
for the Atari laser.

>Speed of Light is not freeware.
>
> * LED v1.45 * 69, 714, 2112: Sex, Drugs, and Rock and Roll!

I seem to be getting nowhere fast, I originally asked for a slide
show that wiLl show pictureS in 256 colours on a bog standard ST, or
if push came to shove then maybe STe only,
Prefrably freeware as I want to fully use it and pass it around,
although a fully usable sharware package would suffice,

BUT BUT BUT SOL is not a slide show, and the unregistered version
would not work as a 256 colour slide show,

I want a program that will go maybe in an auto folder and simply show
the pictures on disk one after the other on a ST, in 256 colours,
these can be shown as Photochrome proves, but what about as a slide
show,

Is this really all that difficult on the ATARI ?

Cheers.............!ynoT

Hi Mike

m> I need help in adding a Blitter to my 1040 STf.
m>
m> There is room for the socket on the motherboard, but I am
m> wondering if I will need a new MMU or GLUE chip in order for the
m> 68000 to address the Blitter.
m>
m> Any ideas, info, or comments? E-mail replies would be helpful.

All you should need to do is fit the Blitter then change over a couple of soldered links.

They are marked as W3 and W4, with the Blitter installed they should both be open. I'm not sure exactly were they are on the board, but I'd expect them to be near the blitter.

You might also need to add a couple of capacitors, C126 and C127, both 0.1uF ceramic.

Hope this helps

Mark

> printer on the DMA bus.

We wrote a program (accessory MagiSLM) for the ST that reads HP-Printer
commands (Laser/Deskjet)
from the serial port, converts it into a bitmap and prints it to the
SLM. It works very fine for
me in these two applications:

- My Falcon prints to the ST using a HP-Driver, and my ST then prints
onto my
ATARI Laser. (This is neccessary, because you can't connect the Falcon
to a SLM).

- My Mac prints to its serial printer port using a HP-Driver and the ST
prints that
out.

Basically that should work with a PC, too (But only if it uses kind of
bitmap printing
for the whole page, not if it uses the inbuild or softfonts of the HP
printers.)

> Frankly, it's a lot of work, and will give you VERY slow results. You can

It was quite some work, yes.

It is slow on an ST. But if you use a Falcon, STE or TT with high speed
ports (using the
program HSMODEM for correct port control) it is quite fast. At least
faster, than a
Deskjet could print a page.

Harald

Thanks for the advice. I found Zero-X (V1.55) and tried it, and it looks like
what I need, but it's too much money at $199....most of the facilities it has
can be achieved I think on my Ensoniq anyway. The demo I got doesn't allow any
saves so I can't even use it to try it out properly.

Are there any other programs that you know of that (cheaper, preferably!) that
allow just a basic dump to the Atari?

Thanks again!

Simon

Yes, but if have a Falcon with 4 MB ST-RAM and a FX-CARD you can have up
to 6 MB FX-RAM, that's 10 MB RAM all-in-all togthether with the NOVA Card.

If you have an AfterBurner040 card you can have 4 MB ST-RAM and all the
FastRAM the AfterBurner allows, which is 64 MB, together with the NOVA
Card.

s > helps.

there are now special commercial drivers for use with the Epson
and Hewlett-Packard line of colour desktop scanners - all it
requires is the software and a special cable to attach the ST to the
scanner (TTs and Falcons use the SCSI port to interface). HOMA
Systems House has the HP drivers; System Solutions has the Epson
drivers. There's also software for the Mustek line of desktop
scanners.

Well there is a 040 board for the Atari Falcon030, but no 060 boards what
I know of.

You can't buy a new Atari machine, as there is no Atari anymore. You should
be able to buy a "new" if you can find one though.

But there are atleast 3 differnet 040 and 060 Atari clones.

1) Hades 040/060
2) Medusa 040/060
3) DirectTT 040/060

And ofcourse the C-Lab Falcon030 which is produced on license from "Atari".

BTW. What happens to the C-Lab falcon now when Atari is gone?

And there is talk about a new Falcon clone from france that will
also have an 040 or 060 together with a DSP, called Cent040/060.
More info about this should be available soon.

There are several software companies supporting the Atari platform.

Which model is this? The Protar host adapters which I am aware of do not
support parity, but maybe there are more current models which I don't
know.

I have written a program called SampleC, which will perform MIDI sample dumps, sample conversion, and has simple librarian facilities built in. Supported sample formats include WAV, AVR and AIFF (including Cubase Audio). The program is non-modal and works under normal TOS and MagiC (probably other replacement TOS's as well).

SampleC is in very late beta-testing ATM and a demo should be available within the next month. The program will be released as shareware with a minimum UK registration fee of 7 UKP (overseas registration should also be available).

If anyone is interested in SampleC, could they contact me via email. I can then inform you when the demo is ready.

Where can we get this utility and how long ago was it written? I would have thought that next to the vaporware hardware controller for the SLM, this would have been a hot item. _I_ definitely would have tried it before I sold my SLM605 for the LJet 4P.

Let me illuminate for Mike (since he's in my user group). He'd like to upgrade the ST Ram without spending $200 for the 2 meg daughterboard or $650 for the 8 meg daugther board (Toad's
prices). I heard about the possibly of removing the 2 megs of chips on the motherboard and installing the next size (for 8 megs ST Ram). Even with the tech work, this would be less than
$50/meg.

> To upgrade the TT ram, the board installed in my TT I believe uses standard 30 pin simms
> currently holding (4) 1x9's I believe.. Can I simply replace them with (4) 4x9's with party
> and then have 16 megs of TT ram.. (Bet pagestream would really fly then!!)..

Look at the board, Mike! I told you that was the criteria for the TT Ram. Count the jumpers and let everyone know how many. I have heard that there were two versions (at least) of the daughterboard with (I believe) different support chips. Someone out there will know which one
you have by the number of jumpers. Also, if anyone can confirm: I thought the TT could take 1X8/4X8 (non-parity) SIMMs. Why would Atari put 1X9 SIMMs in? Actually, now that I think of it, maybe Mike should contact the source of the purchase (at Atari) and see if they know about
the machine. Maybe they had 16 megs in it and just threw 4 megs in to sell it cheap.

Source record: 137545

Hi,

I'm looking for more info about portables Atari ST computers, because I have given up informing me on Atari
computers since 2 years...

The STacy seems to be shown for the first time on 01/90, the STBook and the STPad at the CEBIT of Hanover in
May 91. The STacy and the STBook are portable computers but the STPad is a ...Pad :) without keyboard.

I would like to know:

-When they came out?
-The price?
-Are they always produced?
-Can I found one in second-hand, for which price?
-If there are here some people who have one of theese computers, are you satisfied?
-Info about hardware, software, extensions...
-Are they Web sites about theese?
-All that you judge useful to know.

Thanks.

"K. Ellis" <kellis@primenet.com> mumbled indistinctly:

>Well, apparently you didn't understand what the topic was.
>We were talking about the TOS 4.92 singletasking, not the new AES for
>Mint. This file is a TOS image and thus loadable in RAM at the

Mr Ellis has been rather unpleasent about this (in email to me),
so I made a point of glancing at the whole thread - and nowhere does
it state that the thread is or isn't about MultiTasking. For
refferance, TOS4.92 and AES4.1 are pretty much the same thing.

TOS4.92 is basically a wrapper for an older beta of AES4.1.

Both of them provide the same look and feel. Both of them provide
MultiTOS style multitasking if MiNT is loaded, and simply replace the
existing AES if it isn't. There is little to be gained from running
either of them in single tasked mode as the extended AES functionality

is not used in any program that I am aware of.

>boot time, just like the way Winx does. Even if the desktops are the
>same, they don't run the same way. PLease read the whole message and

They don't load the same way, but they are pretty much the same thing.
AES4.1 is just more practical use as you don't need the boot floppy.
You gain nothing from using TOS4.92.

>do some research before saying anything.

I don't need to research this sort of thing, to be quite honest with
you. I don't like to sound arrogant or anything, but there aren't that
many people around who are more familiar with the subject than me
anyway (Eric Smith, Christer Gustavsson, a couple of others who've
worked on N.AES, oAESis, MTOS, or XaAES). I know exactly how the AES
works, both internally and externally. I am rather amused that anyone
would tell me to go research this subject....

>interfaces to unix stuff you should bear in mind that it would increase the
>porting time substantially, and a lot less would be ported.

Also, the majority of Unix software on the atari was ported because
the person wanted to use that software. I know that the reason I
did the xvt port to MiNT-X11R5 was that I needed a low-resource
Xterm, I released it because I was asked to. The same goes for a
lot of other unix ports. Folks port them 'as-is' because that is what
they wanted. Doing GEM interfaces for a lot of MiNT stuff is harder
and more time consuming than doing the initial port. A good example
is DUftp (GEM based FTP client for MiNTnet). The actual file transfer
and code is taken from the unix BSD ftp client, and took about 2 days
to get working. Doing the GEM interface and making it tie up to the
unix code (which is console based, so it takes a very different
approach to GEM) took another 2 weeks before the first version was
ready, and I NEVER got round to finishing it so I was really happy
with it (I decided it was the wrong way to approach the interface and
abandoned it).

Absolutely correct. I run WWW on both my Mega STe (which is also the
Internet gateway server for Network ST) and my 1040 ST.

> And I have a question that I would like to ask here. I read in a web
> page that 040/060 boards are now available for Atari computers. Is this

The answer to most of those questions is "yes." 040/060 boards are as far as
I know available for the Meusa and Hades Atari clones; there are 040 boards
for the Falcon also, I think. And there are at least 3 clones in production.
More info available through http://www.3rdplanet.com/~starship/atari.htm

Very brief, normally. A single note from each instrument is normal; it is shifted up or down in pitch each time it is played, depending on how it is needed. Sometimes a short vocal (a few words) is also included.

>The guy ask for a mod file of a Bon Jovi song. I assumed it would be more
>than 2 seconds long...

The MOD file will be longer than 2 seconds, of course, but each sample is quite short, and there are normally 16 or fewer samples.

>Obviously, I don't know beans about music & music software. Maybe I better
>understand that, before asking my questions... :)

Find AGtracker or one of he other MOD editors, and you can see for yourself. I have little or no talent for music, but it can be quite amusing to substitute a diesel locomotive's air horn for the guitar in a MOD and play it back. <G> Gives a whole new meaning to "air" guitar...

If it's a hand scanner, and the broken part was the scan head, you can use
most any of the PC hand scanners - I even have a spare one I could ship you
(but it might be cheaper to buy one locally than to pay for shipping).

Any version prior to 1.04; it's a direct (and better) replacement for
StartGEM, from (who else?) CodeHead Software (RIP).

5091. Can I use old ST Monitor for video?

Newsgroup: comp.sys.atari.st
Date: 1996-09-20 00:00:00 UTC
From: jgj@ssd.csd.harris.com
Message-ID: <JGJ.96Sep20153345@jade.ssd.csd.harris.com>
Source record: 137556
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Is there any way to convert a video signal (composite of S-Video) to
the flavor of RGB used by a ten year old color ATARI ST monitor? I'd
like to get some use out of this ancient thing sitting around :-).

5095. Systems For Tomorrow Summer Mailing

Newsgroup: comp.sys.atari.st
Date: 1996-09-20 00:00:00 UTC
From: sft@sound.net
Message-ID: <51rntm$gp5@guitar.sound.net>
Source record: 137592

Hello.

We have just finished our summer Atari catalog mailing. If you didn't
receive one, and would like one. Please send your Name, Address, and
System owned (ST/TT/Falcon/Jaguar/Lynx) to sft@sound.net.

Our catalog features hundreds of programs for TOS based computers.
It also includes Jaguar, Lynx, and even some 2600 and 7800 games.

Catalogs are FREE to anyone in North America. Sorry, we can't send to
the rest of the world at this time :(

Thanks,
Kent @ Systems For Tomorrow

I have not seen this particular error, but have been able to correct
these sort of errors by using a disk editor.

You didn't mention if this has on a HD or floppy.

Do you expect there to be anything in this directory that you want to
keep?

>techies.

Personally, I found installing MiNT, Minix & MiNTNET was relatively easy. I mean it's more difficult than some MS Windows package like Netscape. I got all my archives from CNAM. There was one important doc about a page long & was describing how to make use of MINIX setup program. I have succesfully installed it twice on my f030. Once on my internal HDD but decided to switch it to my external HDD, I had to reinstall as with any Unix OS, you cannot just move the files. As for PPP, I have not tried since I use my PC for Internet access, I need the time for surfing.

>vecause it has a GUI that is within my limited abilities. But certainly
>it seems like someone who _has_ got the files to work could upload them to
>cnam or somewhere as a zip or lzh archive instead of a tgz archive.

One thing to note is that MiNTNet have some files with long filenames. I am not sure how will STZIP or LHARC react to this fact. They may break, well chop off the filename and so your MiNTNET may not work. I guess there may be some other reasons for using a Unix base archiver. I used command line TCSH for installation.

Source record: 137596

I have a Atari TT which was one of the Atari warehouse clearnance items that I'm interested in upgrading if it doesnt get to expensive.

How can I

Upgrade the ST ram from (2) megs to more for better use of the used SLM-605 I'm purchasing.

To upgrade the TT ram, the board installed in my TT I believe uses standard 30 pin simms currently holding (4) 1x9's I believe.. Can I simply replace them with (4) 4x9's with party and then have 16 megs of TT ram.. (Bet pagestream would really fly then!!)..

Any help or ideas, either post here or e-mail me at
mike.harvey@worldnet.att.net

William Goehring <bgoehrin@capecod.net> writes:

>Help, just bought a mint Atari 1040st. I got some programs, but no
>boot? disk. Anyone able to help?

Bill,

There is no such thing as a "boot disk" per se for the 1040ST, since it has ROMs that contain the operating system. You sometimes need a boot disk to load hard drive drivers, etc if your hard drive craps out, but just to get to the desktop, you should be able to boot 1) without ANY disk or 2) with ANY disk.; It does not have to be an Atari disk, an IBM 720K disk would work fine too.

When you turn on the 1040ST it should boot up to the desktop (which probably shows just two floppy drive icons and a trash can). Put a disk in drive A: and click on the drive A: icon (actually double click on the icon) and the drive will read the disk.

If you are asking to get some software, well that's easily resolved since you are on the internet. Just download (FTP) some software you want onto a double sided disk (720K IBM format) and stick that into the 1040, and then when you have opened the drive (a window will open and show the files you have on the disk) then just double click on the program to run it (programs that execute have the extension .PRG or .TOS or .TTP).

>What about rez sizes it is capable of.. and also color pallettes?

John,

The TT will play most serious software (in the resolutions they were written
for anyway), but very few games written for the ST. Most utilities, music
software, spreadsheets, word processors, etc work just fine. There's always
the exception, but they are rare. It's pretty compatible with the ST.

The output of the TT is to a SVGA monitor though. You cannot output to an
SC1224 or SM124. SVGA monitors are pretty inexpensive nowadays though ..
and it gives you access to all three ST resolutions, plus low and medium
TT resolutions. The only TT resolution you can
NOT use with an SVGA monitor is TT High, which needs a special monitor.

I beleive it is possible to connect a EPSON GT-5000 Scanner to an Atari.
First Computer Centre, in Leeds, England used to advertise one in ST Format for
just under 400 pounds.

Oh that's dumb to say, mainly all 286 programs will work on Pentiums with
no problem. The thing is that the Falcon has different "hardware" that's
missing from the ST. So while a 286 game will not bother even to look
for stuff like SB and all that, the ST game without any modification will
look for something on the Falcon that simply isn't there at all. So it
crashes...

That assumes that Tony's game is a by-the-guidelines GEM/TOS program, but
it's STOS which has it's own rules to go by.

First of all, anyone who has a Falcon should know that to run a STOS game
you have to set your processor speed to 8Hz and use STOSfix 3 on it. Do
you not have to use Backwards to play commercial games? :)

Does a programmer have to buy every single model of a computer platform?
Here's how I see it...TOS and GEM programs have 'guidelines' to follow to
work on every single model as well as Geneva, Magic, and all the
emulators. The Atari Compendium can do this. And as for STOS games, a
different breed, here's what I would do if I were writting one.

First I would use STOSfix 1.0 which makes it run from TOS 1.0 to 2.06
There, that's the majority of the ranges. As for the Falcon, I would
tell the user to ue STOSfix 3.0 since it fixes the program for the
person's one machine. On the TT, I think you 'also' have to run a
special program to play ST games on the TT. And as far as Magic and
emulators go, forget it! They were only made to run clea GEM programs
anyways.

> Falcon,TT or whatever, some software yes, there are quite a few ATARI
> Diskzines out there with shells coded by me, that work on all os
> version, But not this game,

Only on the Atari platform do the users 'insist' that it works for ALL models, in fact people are still using 520 ST's with TOS 1.0 for crying out loud! We take this for granted while on the PC platform, nobody even writes for the 486 anymore.

Because of this, ST programmers have to 'try' to write to all platforms with the 520 ST as the lowest common denominator. AND you have to try to make it run on the higher-end machines like the Falcon, plus if it's GEM then it must work with a multitasking system.

If that's not enough, then you try to fit in "stuff" that makes use of the extra hardware in the STe so those users don't get shorted out. In fact, it was the fact that all 'commerical' games work on the STFM that they didn't even bother to do the STe stuff at first and that's why the STe failed to knock down the Amiga a few short years ago.

In short, if I write a program I'll try to make it run on all models as possible as well as make use of the enhancements of the STe. Because YOU asked for it.... :)

BTW, Tony...what FTP sites is your game on? I still have a freaking hard time using Lynx to get it no thanx to my ISP :(

Well that's dumb! Why did they named it a .zoo file when it's really a .tgz?
We have extensions to help tell us what type of files that they are.

And second as far as the only un-gzip/z/tar or whatever program is that
it only works under Mint and not everybody has even a hard drive to use Mint.

Any wonder who got people yelling, "I am angry!" :)

Mike,

You will need to get a daughterboard to upgrade the ST ram. Not sure, but
possibly Best Electronics would have them.

Yes, the TT ram (on the Warehouse TT's .. assuming it is like the one I got) is
upgradeable by simply replacing the 1 meg SIMMS with 4 meg SIMMS .. and
switching a disp switch on the existing TT ram board. I have that information
if you need it (you can reach me at HACE@DELPHI.COM)

You can download Logic Audio from mcc.ac.uk, this works if you have
LOG3 dongle supply with Logic on Ataris. Try this it's discontinued anyway.

BTW, Claes, Time machine on LOGIC AUDIO is one of the best time compression/
pitch changing software. It's lot faster than any other softwares I've ever
seen and sounds very nice too.

TAR may have choked on the file names to a non-Minix partition (I can't remember if you said you did or didn't have a Minix part. I'm assuming from the above you don't.)

Here's something interesting to note. I set up a partition for Minix and run MiNT with only the minix.xfs file and I can't see the long file names under MiNT. The long name is there when I access the partition under Linux, but you can't see it from the MiNT desktop. I'm sure it's just support files that are missing, but I don't know which (not that it matters, I'm going straight for Linux).

I'm using the Link version with an AdSCSI+ (the original Atari MSTe HA is still hooked up, although there are no devices attached, and an Adaptec 5500 hangs off the SCSI bus to interface my tape drive). I do recall getting that rwabs messages, but it was caused by an error in the command line for minit as I recall.

I could be mistaken, but it seems obvious to me that, if you load a different OS after booting, you'll need to reload your HD drivers. After all, you can't bind your drivers to an OS that isn't loaded yet, and after loading, the only drivers it should be bound to are internal. Thus, you need to either boot the OS from floppy, or reload the HD driver after loading the OS. You shouldn't be able to reload it from the HD, because as far as the OS knows, you don't have one yet.

Once they are saved a Pchrome files, you can use one of the proggies PCSVIEW I believe to display 'em

s> Is this really all that difficult on the ATARI ?

Write the software, Convert whatever into SPU format and then display with SPECPLUS or whatever it is to show SPUs in STOS. The rest is easy :)

See you earlier,

Steven

Try ESS-Code by Michel Forget. You should be able to pick it up from one of the Atari ST archives. Can anybody recommend a good one to get it from?

HLW>> does not work together with 14MB ST-RAM (Alternate RAM as much as
HLW>> you want).

HLW>If you have an AfterBurner040 card you can have 4 MB ST-RAM and all
HLW>the FastRAM the AfterBurner allows, which is 64 MB, together with the
HLW>NOVA Card.

Thats correct but you need an updated version of the ab40_ram.prg because
version 1.0 only allows you to use 16 megs of fastram. The new version
works perfectly with my 32 meg SIMM :-)

Tschuess
Frank

P.S.: If someone is interested I will post this little programm here,
because its only about 3k small.

There is a prog called pcsview2.prg which is part if the PhotoChrome
package. It can be autobooted and will load Degas PC1 and Tiny TNY
pics as well as PhotoChrome's PCS files. All can be ICE packed
(v2.40 only).
I recently saw the PhotoChrome archive on cnam, called something like
pchrome4.zip, but I have it if you can't find it.

Rich.

>to get the job done. Don't whine that no one made a 256 color GIF viewer for the ST,

I strongly suggest that you read the WHOLE thread before you accuse
me of "whining",
I already stated in an earlier or original post that other formats
would be ok,

I dont recall having a whine, or a complaint or even a moan, just a
simple request an expresions of suprise that such a progream had not
already been made,

I would prefer it if you took the time to read the thread you decide
to jump into, I have not been whining as you put it,

You have just insulted me, and that was uncalled for :(

I did not insult you?, so I think an apology is due ?, posting to a
public newsgroup telling me not to whine, when you got it wrong, is an
insult,

Cheers.............!ynoT

Hey the reason people are having trouble with that edith download is
because it is not a .zoo file! It is really a .tgz (tar compressed g-zip).
First un-tar it then un-gzip it. You're all set.

Ciao

I thought you gunzipped, then untarred... gz _is_ at the end. Though I
understand TAR 1112 may do both, if you know the magic switches.

This is exactly the problem. It needs to search in the floppy to get
the hard disk driver. The proble is that the author doesn't know how
and why the TOS4.92 doesn't want to read the c boot sector when
tos4.04 does it. So it is not loadable from the hard drive completely
because you still need to have a floppy that contains the hard disk
driver. Apparently Craig knows how to do it, and says that everyone
knows, actually not me, the author and you don't know howto do it
fully loadable from the harddrive without having to insert a disk
with the driver. So just ask to craig I am sure he'll help you out.
hehehehh I love it. :)

Because of all the "Mac" mentions at the beginning and the Base-64 reference, I'm guessing it was compressed under Mac Netscape, which should also be able to decompress.

Dan

>it will not decode on anything, I've even tryed it on TurnPike.

If you have trouble decoding Mime with Esscode this will do the trick:

First Mime encode a short file. BITFTP.FLT in the original Esscode
distribution is perfect for this! Open the by you encoded file with a
texteditor and delete the line that starts with: "Content-MD5: "

Then exchange the small encoded part (W0VTUy1Db2RlIE etc. in two
lines) with the corresponding, usually much longer, part from the mail
you could not decode and then save.

Run Esscode and select "Mime decode". In the first fileselector
select your new file and in the second the destination _and_ full name
of the encoded file.

If the original mail contained several encoded parts this has to be
repeated for each.

Only in case you don't know: With some hard disk drivers (e. g. HuSHI, HDDRIVER) you don't need this program because you can set the number of additional folders when configuring the driver.

Okay, _finally_ figured it out. Either the 3 wire connector at the Falcon motherboard doesn't make a reliable contact or there is some kind of capacitance or other bizarre electrical issue going on. If the keyboard doesn't work, I have to shut off the Falcon, remove the Freekeys connector with the machine off and then put it back on, then the keyboard will work. I can't do that with the machine on and make it work. Unfortunately, I can't seem to re-arch the connectors (they are rather well contained), so I guess I'll just re-plug every time I start the machine or get a whole new connector.

Dan

I could be mistaken, but it seems obvious to me that, if you load a different OS after booting, you'll need to reload your HD drivers. After all, you can't bind your drivers to an OS that isn't loaded yet, and after loading, the only drivers it should be bound to are internal. Thus, you need to either boot the OS from floppy, or reload the HD driver after loading the OS. You shouldn't be able to reload it from the HD, because as far as the OS knows, you don't have one yet.

I'm using the Link version with an AdSCSI+ (the original Atari MSTe HA is
still hooked up, although there are no devices attached, and an Adaptec 5500
hangs off the SCSI bus to interface my tape drive). I do recall getting that
rwabs messages, but it was caused by an error in the command line for minit
as I recall.

I'm not Craig, but I better still answer. You can use the new AES for
MiNT (AES 4.1, GEM.SYS) without MiNT so that it only singletasks.
Just load it to memory with sometyhing like ramboot (was it that)
and vola you have the singletasking TOS.

TAR may have choked on the file names to a non-Minix partition (I can't remember if you said you did or didn't have a Minix part. I'm assuming from the above you don't.)

Here's something interesting to note. I set up a partition for Minix and run MiNT with only the minix.xfs file and I can't see the long file names under MiNT. The long name is there when I access the partition under Linux, but you can't see it from the MiNT desktop. I'm sure it's just support files that are missing, but I don't know which (not that it matters, I'm going straight for Linux).

Have to disagree here, the TT uses VGA, _not_ SVGA. However, most SVGA monitors support the VGA sync rate.

Hi,

I'm looking for an efficient way to exchange files between my ST (TOS) and a UNIX workstation running AIX. Both sides are running 14.400 bps modems supporting MNP-5 and V.42bis.

Currently I'm using kermit on both sides, but there seem to be a lot of overhead so the data transfer rate is low. Is there a newer, faster solution? (The programs should be accessable via ftp)

Thanks in advance,

Lasse

I would not recommend this. Consider the cluster size which is saved in
a 16 bit field. With 2 sectors per cluster (this is the standard value)
and 32768 bytes per sector you'd get a 16 bit overflow for the cluster
size. This seems to work with Falcon TOS but I wouldn't bet on your data
being secure when using partitions that are outside the GEMDOS limits.

Yes, its possible to use the ST with a VGA monitor if it supports the
correct refresh rate. There was a document on how to connect the ST to a
NEC multisync a few years back, but I do not know where to find it.

John,

Are you switching between a VGA (15 pin connector) and a SC1224 or
equivalent (round connector), using the Atari monitor adapter blocks?
If so, I don't know of a switchbox but it should be possible to build one.

If you have a VGA monitor with a 15.75 KHz horizontal scan rate, such as
the C1440 (Electrohome) that I am using, you can get the Multisync Gizmo
from Wizztronics, which will give you both VGA and RGB resolutions on
a single monitor. Other monitors that will work this way are NEC 3d,
Acer 7015.

You can download Logic Audio from mcc.ac.uk, this works if you have
LOG3 dongle supply with Logic on Ataris. Try this it's discontinued anyway.

BTW, Claes, Time machine on LOGIC AUDIO is one of the best time compression/
pitch changing software. It's lot faster than any other softwares I've ever
seen and sounds very nice too.

Mike,

You will need to get a daughterboard to upgrade the ST ram. Not sure, but
possibly Best Electronics would have them.

Yes, the TT ram (on the Warehouse TT's .. assuming it is like the one I got) is
upgradeable by simply replacing the 1 meg SIMMS with 4 meg SIMMS .. and
switching a disp switch on the existing TT ram board. I have that information
if you need it (you can reach me at HACE@DELPHI.COM)

Kent,

I understand you have rounded up a bunch of new TT high resolution monitors
and are taking advance orders to deliver at the Dallas Show (Oct 12th). Sounds
great. I don't need one (I still have a Viking), but your $299 price is
terriffic.

5177. FS:Complete 1040STe 4meg (Stock Config)

Newsgroup: comp.sys.atari.st
Date: 1996-09-21 00:00:00 UTC
From: bjr@edison.ebicom.net
Message-ID: <51vvft$abg@einstein.ebicom.net>
Source record: 137411

Aloha,
I recently got myself a Falcon...I'm trying to get up enough
funds for a SVGA monitor and a JAZ drive for use with CuBase.

If you're looking for an STe system, email me with an offer...
I'd like to move all of this stuff in exchange for a SVGA monitor and
a LARGE/FAST SCSI drive. I'll consider any reasonable offers for
the whole system or single pieces.

Here's what I've got...

1040STe with 4meg of RAM. Unit is about 3 years old.

SC1224 Color Monitor

14" Inch Monochrome Monitor (Approx 1 year old)

SM124 Monochrome Monitor (Doesn't work...keeps blowing fuses)

ICD AHDI+ SCSI hard drive controller and Software
80meg Segate Hard Drive (5.25" model, yes it's old, but works well)
2X SCSI Chinon CD-ROM (Works with AHDI+, LINK, Falcon, TT)
2 bay SCSI case (Pretty hacked up in the rear, but it still looks good)
Note...the Case for these SCSI Items is a bit hacked up in that
I had to remove the rear panel to put in a new power supply
Rather than pay $100 bucks for a like replacement, I made
a 300W PC power supply fit into the case (Actually a better PS)

2 DMA Cables

Super Charger MS DOS Emulator (1meg installed) with MSDOS 4.XX

Epson LQ500 Printer with Cable, Tractor Feeder, and Single Sheet Feeder

Replay 4 Sampleing Cartridge and Software

Unitor II (I might not sell this but I'll consider offers)

In Terms of Software...
If you're looking to set up an ST system from scratch and need
software just let me know. I have most anything you would ever
need. I'm trying to keep most of it since I'm using a Falcon now
and the bulk of it works well on the Falcon. I will however let a lot
of it go in order to get you set up and running should you need it. Keep
in mind, I'll only let you have "complete legal packages" that include all
documentation and origonal floppies.

If you buy or trade for everything...you automaticly get a full copy
of Atari Works, Warp 9, InterLink ST, a

hand full of games, NeoDesk 3, Universal File Selector, and anything
else I happen to own more than one liscense for. Full docs and origonal
disks will be included. Let me know what else you need and I'll
see if I can include it in the deal.

Thanks,
Brian

5178. Floppy disk help

Newsgroup: comp.sys.atari.st
Date: 1996-09-21 00:00:00 UTC
From: tcano@Silicon.NET
Message-ID: <51vvdr$n4s@emerald.silicon.net>

I need a big favor from Atari folks out there. I have a floppy
with valuable tax information on it that has went bad somehow.
It was formatted double sided.....MAXIFILE shows it formatted
single sided but also shows 80 sectors..... I get a Disk error message
from the desk top but if I keep cliking cancel it will eventually
work....however.....lots of files are missing...mainly my LDW files.
There seems to be a problem in FAT? Itried UNDELETE profram that didn't
work either.....

Any suggestions??????

From: fxites@aol.com
Message-ID: <5203o0$b8h@newsbf02.news.aol.com>
Source record: 137413

Hello, I wish to buy a standard, Atari issue ST joystick... the one that looks just like a 2600 joystick, but uses grey plastic rather than black. If you have a 2600 joystick up for sale, let me know, but keep in mind that I'll be pretty chintzy with the price I'll pay. Of course, I'm an all around chintzy kind of guy, so be warned! :)

Thanks for the time,
Jon

P.S. Anyone have Llamatron for sale? Duh... was it PD or what?

BOINK! Now if only I could find that rotten light switch!

5180. Parameter to boot Atari partition under LInux?

] program? Thanks! :)

Hi there,

I don't know if this is a help or not, but AFAIK, the only formats not supported by the excellent movie player are iv3x and iv4x. I am not an expert but I think that iv4x is a proprietary Windows codec and there is a lot of grief about it from Mac users, so I don't know if it will survive (it's a part of uncle Bill's bid for world domination!).

<phew> Anyway, I don't know where to get AVI's which will specigfically *will* work with movie player, so I thought I would tell you which ones *won't* work at the moment.

Hope it's a help...

I have an Atari Stacey I'm selling for Salvage. It is one of the first ones that came off the Assembly Line, without batteries. It's Switching Power Supply has been tested and works fine. The Stacey Switching Power Supply can Run in the U.S. or Europe on 110 or 220 Volt. These Power Supplies Regularly sell for $100 U.S. The Stacey without the Power Supply goes for $175 U.S. Dollars. Stacey with Power Supply goes for $250 U.S. The Power Supply won't be available for sale until after the Stacey is sold, with or without it. It's a 4 MB Stacey with Hard Drive. Please direct all Replies Through E-Mail to: bensmith@teleport.com or call Ben at (503)256-9974.

Possible, but I have been told that it is not necessary to set up a Minix
partition to use MintNet. Without Minix you can not have anything but 8.3
filenames, whether you archive them as gnutar or zip or lzh.

>>
>>Why do you wish to exclude all the '030 users from your software? How would it
>>look if someone reviewed IBM software, saying it was just great, but only
>>worked on '286 machines these days? :)

Good grief I do not want to exclude them, to be honest nothing would
give me greater pleasure than to have my software work on ALL
machines, the thread is HOW ?????? ,I imagine that if I owned a top
end machine then it would be easier, but I own a lower end machine, I
already stated that some of my software does work on all machines,
including emulators <smile>, but a fast moving platform game that
depends on exact proc time? well that's a little more difficult, we
already covered that...

>>I'm no programmer, but aren't there software libraries, tips & tricks,
>>programming libraries, & compendiums that allow software to work on _all_ TOS

NO there are not......there are for certain packages, a GEM program
can have the above, but I think you would agree that you do not see
many dedicated platformers in GEM :)

>>machines? Can't you find software testers with a variaty of machines? (Software
>>should be tested by a number of people, I would think, before it's released for
>>sale.) Other programmers do.

BTW all my titles are FREEWARE, this should NOT be associated with a
lesser quality products as HEARTLAND has already been reviewed as
BETTER than recent commercial platformer offerings on the ST, plus
other FREEWARE titles have won awards and in many magazine top ten
type listings have stuffed Licenceware/commercial titles,sorry if that
sounds a little show offish, but people read "freeware" and think
lower quality....

Now now! don't get cheeky,<grin> I have many people testing my
software on many machines, quite a few of them in this newsgroup,
testing a program finds the faults, it does not fix them?, and again
the thread is HOW ???

>>If you write software for a subset of the platform, your software will have
>>less appeal to 'everyone.' How about folks who have an ST, but are thinking

Wooooo you are straying here, again you miss the point, I am not
purposely trying to write software just for the ST, I do want and
would like software to be fully compatible, you make it sound like I
have a choice and have decided to make it ST only, again the original
question was
1.. How do I make it compatible for machines I do not own,
2.. Why should the program get a lesser review because it does not
work on a machine I cant program for because of point 1?,

>>about getting a used TT or Falcon? Surely they will want to know your software
>>will not be ported to the new macine. Surely it is unfortunate to them that the
>>software only works on an ST. I doubt they would make the investment in your
>>software, even if they currently own an ST. Quote number one makes perfect
>>sense to me. :) It is natural for older, slower machines to give way to newer,
>>faster models. Software that does not keep up with this progression is at a
>>disadvantage in the marketplace, and will be reviewed as such.

That's Ludicrous!!, you are saying that the Falcon etc replaces the
ST, you imply that such machines are a natural progression,
I would argue the point, some people would support the notion that
the ST is better than the Falcon, there are things a ST owner can do
that a Falcon owner cannot (hehehe unfortunatly playing HEARTLAND is
one of them hehehe)
Not in power maybe, but if you bring everything down to power then
there are a lot better machines than the Falcon <duck>...

>>I also mean this in a friendly manner. :) I appreciate your difficulty. :) And
>>I'm glad your are writting software for the TOS platform, whatever versions you
>>support! :) But, I encourage software reviewers to continue to mention
>>compatibility problems that software has with TOS versions, and I would

There you go....again you refer the software as a problem....not to
ST owners it is not?, and I repeat, it was made on a ST ?, the vast
majority of ATARI users are ST owners, you take all the Falcons and TT

etc, put them all together, and you will still have nowhere near as
many users as ST owners,

>>encourage software developers to ensure compatibility with as many TOS' as
>>possible. :)

Yes yes yes, I agree, I would also, I do feel you missed the point,
I am trying to make my software compatible, I just don't see how I
can get my ST to make software that will run faultlessly on a
Falcon,TT or whatever, some software yes, there are quite a few ATARI
Diskzines out there with shells coded by me, that work on all os
version, But not this game,

May I ask.....I recall you do also have access to a ST or STe, have
you perhaps had chance to view HEARTLAND, It is not important to the
debate, but I would feel better knowing you had tried the actual
program I am struggling to make compatible and would appreciate your
response (in c.s.a.st) to the game :)

<smile>

Sorry I missed your original post, a worrying problem I will have to
take up with my provider, hmmm

Cheers.............!ynoT

Because of all the "Mac" mentions at the beginning and the Base-64 reference, I'm guessing it was compressed under Mac Netscape, which should also be able to decompress.

With TOS 1.04 the upper limit is 256 MByte regardless of the hard disk
driver you use. Not the drivers set the limits, the operating system
does.

In order to avoid confusion I'd like to mention that there never was a
version 5.6 of HDDRIVER. The current version is 6.0. The demo version
can be found at the usual place, including information about the most
recent changes:
http://acp5.chemie.uni-kl.de/seimet/hddriver_english.html.

At the end of the first paragraph, there is a mention of a Photochrome slide show, which you blooped right over (or it isn't what you're looking for). Where can the Photochrome slide show be found, or is it a feature in Photochrome? Maybe Tony could contact the Photochrome developers and see what they have to say if it's not exactly what he wants.

Basically, Tony, you have _maybe_ 3 choices to get 256 color on an ST, Spectrum 512, Photochrome, and SOL. Concentrate on finding a slide show for one of these programs (I'm 99% sure there's one for Spectrum), and convert the images over to that format to get the job done. Don't whine that no one made a 256 color GIF viewer for the ST, because it requires delicate timing to make it happen, and it's quite probable that the GIF format doesn't lend itself well to showing a large number of pics in succession with any kind of speed. Many people spent the time to get the existing Atari standards going, use them! Conversion programs abound.

Good luck,

Dan

I thought you gunzipped, then untarred... gz _is_ at the end. Though I
understand TAR 1112 may do both, if you know the magic switches.

Okay, _finally_ figured it out. Either the 3 wire connector at the Falcon motherboard doesn't make a reliable contact or there is some kind of capacitance or other bizarre electrical issue going on. If the keyboard doesn't work, I have to shut off the Falcon, remove the Freekeys connector with the machine off and then put it back on, then the keyboard will work. I can't do that with the machine on and make it work. Unfortunately, I can't seem to re-arch the connectors (they are rather well contained), so I guess I'll just re-plug every time I start the machine or get a whole new connector.

If you have trouble decoding Mime with Esscode this will do the trick:

First Mime encode a short file. BITFTP.FLT in the original Esscode
distribution is perfect for this! Open the by you encoded file with a
texteditor and delete the line that starts with: "Content-MD5: "

Then exchange the small encoded part (W0VTUy1Db2RlIE etc. in two
lines) with the corresponding, usually much longer, part from the mail
you could not decode and then save.

Run Esscode and select "Mime decode". In the first fileselector
select your new file and in the second the destination _and_ full name
of the encoded file.

If the original mail contained several encoded parts this has to be
repeated for each.

> partition of at least 2 gigs.

I would not recommend this. Consider the cluster size which is saved in
a 16 bit field. With 2 sectors per cluster (this is the standard value)
and 32768 bytes per sector you'd get a 16 bit overflow for the cluster
size. This seems to work with Falcon TOS but I wouldn't bet on your data
being secure when using partitions that are outside the GEMDOS limits.

Only in case you don't know: With some hard disk drivers (e. g. HuSHI, HDDRIVER) you don't need this program because you can set the number of additional folders when configuring the driver.

5200. file transfer Atari <-> Unix

Newsgroup: comp.sys.atari.st
Date: 1996-09-21 00:00:00 UTC
From: fl4a004@rzaixsrv2.uni-hamburg.de
Message-ID: <521b79$4jl@rzsun02.rrz.uni-hamburg.de>
Source record: 137434

Hi,

I'm looking for an efficient way to exchange files between my ST (TOS) and a UNIX workstation running AIX. Both sides are running 14.400 bps modems supporting MNP-5 and V.42bis.

Currently I'm using kermit on both sides, but there seem to be a lot of overhead so the data transfer rate is low. Is there a newer, faster solution? (The programs should be accessable via ftp)

Thanks in advance,

Lasse

Yes, its possible to use the ST with a VGA monitor if it supports the
correct refresh rate. There was a document on how to connect the ST to a
NEC multisync a few years back, but I do not know where to find it.

There is a prog called pcsview2.prg which is part if the PhotoChrome
package. It can be autobooted and will load Degas PC1 and Tiny TNY
pics as well as PhotoChrome's PCS files. All can be ICE packed
(v2.40 only).
I recently saw the PhotoChrome archive on cnam, called something like
pchrome4.zip, but I have it if you can't find it.

Rich.

Hi there...

William Wong (wongck@ti.com) wrote:
:
: One thing to note is that MiNTNet have some files with long filenames.

Does it? Why is this so? It seems so unnecessary!! Surely to goodness it isn't necessary to have long filenames in the archive!! The point is that how many of us are prepared to format a minix partition, and install a fs driver that does long.file.names? This is not an option for some (me included). The guys who get miNTnet etc...working properly are full of praise for it, and quite right it is bullet proof when installed properly. However, when these guys start saying that it should be on everyones shopping list (and yes they do say this!), they seem to forget that a majority of Atari users cannot use minix etc...hence confusion reigns supreme when non-guru type Atarians attempt to install configure this stuff. I say that if it is hard to use then people should say so and not try to get others into something that they may not be able to safely comprehend...

Just for the record, I used TAR.TTP as according to the docs that came with it (used -xvf switch). TAR.TTP still corrupted my drive...do I hear a bug scuttling????

Dark aged indeed :-)

DBA Magazine was an excellent disk magazine that started about three or four years ago, made in the Netherlands. About a year ago (or two?) it switched primarily to Falcon.
ST NEWS was the first and longest-living disk magazine on the Atari platform, having started July 1986 and done 42 issues up to the final one of July this year.

```
TOAD COMPUTERS ANNOUNCES ATARIFEST '96!
---------------------------------------
Come celebrate TEN WONDERFUL YEARS of AtariFests,
Toad Computers, and TOS at AtariFest '96.

Toad Computers is pleased to announce AtariFest '96,
to be held October 26th, 1996 at Toad Computers, in
Severna Park, Maryland, USA.

- Door Prizes
- Atari BARGAINS
- PC Systems
- Browse the Internet
- Atari Show & Tell
- FREE REFRESHMENTS!
- FREE ADMISSION!

We will be featuring a wide range of SPECTACULAR deals
on new and used Atari products including Jaguar, Lynx,
ST, TT, Falcon, Portfolio, and the 8-Bit series. We are
really excited about the show!

CELEBRATE THE WORLD OF ATARI!
Atari products are drying up fast; this may be your
last chance to pick up Atari hardware, software, and
accessories, all at incredibly low prices!

Plus, see what's new from Europe for the ST and Falcon,
including:

- MagiC 5 (with Windows 95 Long Filename Support)
- MagiC PC (MagiC for the PC with Ease 5)
- MagiC Mac (running MagiC 5 and Ease 5)
- Ease 5 for Atari
- Texel -- NEW Atari Spreadsheet!

Don't miss this opportunity!

AtariFest '96 is being held in place of our Holiday
Festivals we have hosted for the past three years.
Now, it's a little earlier, and it's a different format.
We really hope you'll join us for what we're sure will be
a once-in-a-lifetime event!

SPECIALS you can take advantage of at ATARIFEST '96:
```

Toad Chameleon 166MHz: JUST $1299.00!
- Pentium 166 - 16MB RAM
- 1.3GB Hard Disk - Gemulator 96
- 1MB PCI Video - Windows 95 & Plus!
- 3.5" Floppy - Mini Tower Case
- 8X CD ROM - Keyboard, Mouse
- Speakers - 16-Bit Sound Card
Comes with Gemulator '96 -- RUN YOUR FAVORITE
ST PROGRAMS! Includes MagiC, so no hardware
is necessary to run Gemulator!

ATARI JAGUAR: Just $59.00!
- Includes Complete Atari Jaguar Console
- Includes WOLFENSTEIN 3D Game!

Hundreds of fantastic deals on CLEARANCE ITEMS,
OVERSTOCKS & DEMO MODELS in ALL PRODUCT CATEGORIES!
Must be present to take advantage of these prices!

Don't miss this event! Door prizes! Free stuff!
Great prices! Bring your most unique Atari memorabilia
for show & tell! Select developers will be in attendance
to answer your questions about products! Stay tuned to
STNEWS/JAGNEWS and www.ataricentral.com
for more details!

From: "K. Ellis" <kellis@primenet.com>
Message-ID: <Pine.BSI.3.95.960921093658.11268A-100000@usr08.primenet.com>
Source record: 137443

This is exactly the problem. It needs to search in the floppy to get
the hard disk driver. The proble is that the author doesn't know how
and why the TOS4.92 doesn't want to read the c boot sector when
tos4.04 does it. So it is not loadable from the hard drive completely
because you still need to have a floppy that contains the hard disk
driver. Apparently Craig knows how to do it, and says that everyone
knows, actually not me, the author and you don't know howto do it
fully loadable from the harddrive without having to insert a disk
with the driver. So just ask to craig I am sure he'll help you out.
hehehehh I love it. :)

Hey the reason people are having trouble with that edith download is
because it is not a .zoo file! It is really a .tgz (tar compressed g-zip).
First un-tar it then un-gzip it. You're all set.

Ciao

John,

Are you switching between a VGA (15 pin connector) and a SC1224 or
equivalent (round connector), using the Atari monitor adapter blocks?
If so, I don't know of a switchbox but it should be possible to build one.

If you have a VGA monitor with a 15.75 KHz horizontal scan rate, such as
the C1440 (Electrohome) that I am using, you can get the Multisync Gizmo
from Wizztronics, which will give you both VGA and RGB resolutions on
a single monitor. Other monitors that will work this way are NEC 3d,
Acer 7015.

Well that's dumb! Why did they named it a .zoo file when it's really a .tgz?
We have extensions to help tell us what type of files that they are.

And second as far as the only un-gzip/z/tar or whatever program is that
it only works under Mint and not everybody has even a hard drive to use Mint.

Any wonder who got people yelling, "I am angry!" :)

Oh that's dumb to say, mainly all 286 programs will work on Pentiums with
no problem. The thing is that the Falcon has different "hardware" that's
missing from the ST. So while a 286 game will not bother even to look
for stuff like SB and all that, the ST game without any modification will
look for something on the Falcon that simply isn't there at all. So it
crashes...

That assumes that Tony's game is a by-the-guidelines GEM/TOS program, but
it's STOS which has it's own rules to go by.

First of all, anyone who has a Falcon should know that to run a STOS game
you have to set your processor speed to 8Hz and use STOSfix 3 on it. Do
you not have to use Backwards to play commercial games? :)

Does a programmer have to buy every single model of a computer platform?
Here's how I see it...TOS and GEM programs have 'guidelines' to follow to
work on every single model as well as Geneva, Magic, and all the
emulators. The Atari Compendium can do this. And as for STOS games, a
different breed, here's what I would do if I were writting one.

First I would use STOSfix 1.0 which makes it run from TOS 1.0 to 2.06
There, that's the majority of the ranges. As for the Falcon, I would
tell the user to ue STOSfix 3.0 since it fixes the program for the
person's one machine. On the TT, I think you 'also' have to run a
special program to play ST games on the TT. And as far as Magic and
emulators go, forget it! They were only made to run clea GEM programs
anyways.

> Falcon,TT or whatever, some software yes, there are quite a few ATARI
> Diskzines out there with shells coded by me, that work on all os
> version, But not this game,

Only on the Atari platform do the users 'insist' that it works for ALL models, in fact people are still using 520 ST's with TOS 1.0 for crying out loud! We take this for granted while on the PC platform, nobody even writes for the 486 anymore.

Because of this, ST programmers have to 'try' to write to all platforms with the 520 ST as the lowest common denominator. AND you have to try to make it run on the higher-end machines like the Falcon, plus if it's GEM then it must work with a multitasking system.

If that's not enough, then you try to fit in "stuff" that makes use of the extra hardware in the STe so those users don't get shorted out. In fact, it was the fact that all 'commerical' games work on the STFM that they didn't even bother to do the STe stuff at first and that's why the STe failed to knock down the Amiga a few short years ago.

In short, if I write a program I'll try to make it run on all models as possible as well as make use of the enhancements of the STe. Because YOU asked for it.... :)

BTW, Tony...what FTP sites is your game on? I still have a freaking hard time using Lynx to get it no thanx to my ISP :(

>be able to take full advantage of the TT with these monitors?
>What about rez sizes it is capable of.. and also color pallettes?

John,

The TT will play most serious software (in the resolutions they were written
for anyway), but very few games written for the ST. Most utilities, music
software, spreadsheets, word processors, etc work just fine. There's always
the exception, but they are rare. It's pretty compatible with the ST.

The output of the TT is to a SVGA monitor though. You cannot output to an
SC1224 or SM124. SVGA monitors are pretty inexpensive nowadays though ..
and it gives you access to all three ST resolutions, plus low and medium
TT resolutions. The only TT resolution you can
NOT use with an SVGA monitor is TT High, which needs a special monitor.

William Goehring <bgoehrin@capecod.net> writes:

>Help, just bought a mint Atari 1040st. I got some programs, but no
>boot? disk. Anyone able to help?

Bill,

There is no such thing as a "boot disk" per se for the 1040ST, since it has ROMs that contain the operating system. You sometimes need a boot disk to load hard drive drivers, etc if your hard drive craps out, but just to get to the desktop, you should be able to boot 1) without ANY disk or 2) with ANY disk.; It does not have to be an Atari disk, an IBM 720K disk would work fine too.

When you turn on the 1040ST it should boot up to the desktop (which probably shows just two floppy drive icons and a trash can). Put a disk in drive A: and click on the drive A: icon (actually double click on the icon) and the drive will read the disk.

If you are asking to get some software, well that's easily resolved since you are on the internet. Just download (FTP) some software you want onto a double sided disk (720K IBM format) and stick that into the 1040, and then when you have opened the drive (a window will open and show the files you have on the disk) then just double click on the program to run it (programs that execute have the extension .PRG or .TOS or .TTP).

Hi there...

A quite disturbing problem has hit the audio system in my Falcon. It has the following symptoms...

1. System beeps/clicks/bells only sound in the right channel
2. Samples play back in both channels but the left channel sounds distorted, almost like it is going through a ring-modulator

Has anyone reading this encountered the same?, and if yes, what is the remedy. I have not checked for dry joints yet, but suspect the problem is bigger than that... :(

TIA for any help...

At 23:00:26 on 18 Sep 06, starship@3rdplanet.com wrote this about I am angry!!

>> But certainly it seems like someone who _has_ got the files to work
>> could upload them to cnam or somewhere as a zip or lzh archive
>> instead of a tgz archive.
>> Just my two cents.

Could it not just be that .ZIP and .LZH _don't_ support anything other than
8.3 filenames whereas most MiNT/MiNTNet stuff uses long filenames??

BTW - I _did_ have a working MiNTNet setup but pppd has mysteriously stopped
working with a strange error <sigh>.

ATB,
Karl.

I'm not Craig, but I better still answer. You can use the new AES for
MiNT (AES 4.1, GEM.SYS) without MiNT so that it only singletasks.
Just load it to memory with sometyhing like ramboot (was it that)
and vola you have the singletasking TOS.

Sorry,
I can't agree. I downloaded Edith from Aennius' pages (had to do it
three times!), but have quite successfully depacked it with zoo on standard tos
on a MegaSTe. Someone's doing something wrong. I did have to disable most
accessories and tsr's to have zoo work properly.

I use SoundDiver on my STE and I couldn't live without it anymore...
Easily the best sysex system for the Atari, and it's still in constant
development too (I've had about 4 or 5 majorish updates free so far, the
online support from the author is fanastic). Recommended.

********** NOW RELEASED **********

The More Than Games Flyer UPDATE 1996-A
Many more items for Atari 8 and ST. With things for Apple II & Commodore.

300 items not in the last flyer. Almost 1100 pieces.
Now with a Portfolio Public Domain/Shareware library.
We've added almost 500 more magazines.

You can request any of the following:

*) MTG Flyer(94)- 40K each, 637 lines.
*) Games(2600, 5200, etc.) List- 5K, 67 lines.
*) Magazines List- 18K(due end of Sep 96), about 200 lines.
*) 1996 Update(all systems)- 40K, 538 lines.

Specify list(s) and whether you want ASCII or A8 Atari format,
and your email address, or postal address if you want a printed
version.
Also, let me know if you are no longer interested in Atari stuff.
Email to:74766.1561@compuserve.com.

Hi Krystian,
Sounds great!!! Which version of HDDriver do you use?
I tested a lot of HD's some time ago and couldn't get higher than my 1280-disk with HDDriver then, but maybe it's time to borrow some HD's again and start testing once more... (as well as updating HDDriver to the latest, 6.0)

Best regards,

Claes

I'm using the Link version with an AdSCSI+ (the original Atari MSTe HA is still hooked up, although there are no devices attached, and an Adaptec 5500 hangs off the SCSI bus to interface my tape drive). I do recall getting that rwabs messages, but it was caused by an error in the command line for minit as I recall.

I could be mistaken, but it seems obvious to me that, if you load a different OS after booting, you'll need to reload your HD drivers. After all, you can't bind your drivers to an OS that isn't loaded yet, and after loading, the only drivers it should be bound to are internal. Thus, you need to either boot the OS from floppy, or reload the HD driver after loading the OS. You shouldn't be able to reload it from the HD, because as far as the OS knows, you don't have one yet.

I need the following items; I can't make a large offer (or I'd buy them from Best Eelctronics and hang the expense!) but I can pay a small amount plus shipping:

Docs for the JRI RAM+ SIMM board. This is already installed, but it was a sloppy job and I want to verify that everything is correct before applying power.

An MMU, a GLUE, and 2 shifters for the 1040ST. A power supply would probably be useful, also. "Dead" machines are welcome for salvage.

Please email offers to atari@teleport.com

You are the expert - I bow to your superior knowledge. Besides, the largest
tape I can get for my Archive Viper drive is 1.6 gigs, so I'd have to split
the backup across tapes. <G>

Octopus already does this. Until my MIDI ports died on the 100ST, I had
node 2 running on the 1040 and all the BBS messages and downloadable files on
the Mega STe. When the DMA Ethernet card (due out in late November/early
December) is available, it will be as fast as any PC network.

FWIW, Michael has responded to my email; he tells me that, as the market is so small, and he gets so few registrations, there will not be another update to ESScode. I intend to register anyhow, and I would recommend anyone else who uses the program regularly to do the same.

5257. UK, How much ??

Newsgroup: comp.sys.atari.st
Date: 1996-09-22 00:00:00 UTC
From: stosser@airtime.co.uk
Message-ID: <3245237f.4214231@news.airtime.co.uk>
Source record: 137284

The following is a posting I just found, it is now 12.40 pm on a
sunday, I just tried it and I got my account info there and then,
exactly how much i had spent on phone calls up to 10pm last night,
And its a free call :))

This as far as I know is not an official service BUT DOES WORK, if
you get into trouble for using it <?> dont complain to me:),

Thank me later :))))

****
This works!

From: Keith Pritchard <keith@theinter.net>
Newsgroups: u-net.support; u-net.talk
Subject: How to monitor your BT usage!
Date: 19 September 1996 10:19

Hi there,

I've just read found this info in a newsgroup somewhere and shock,
it ctually seems to *work*!

Its an automated service which will tell you the current amount on
your BT bill so you can track how much you have used it and wont get
a hock when the Bill arrives!

The number to call is 0800 854608

When you are connected, you will have to press ** and then your
full telephone number including STD code.

After this, you have to press the first eight digits of your BT
Customer number (to be found on the top of your last bill)

You'll then hear how much your bill was at the 10pm the previous day
(before discounts etc).

It works for normal lines and ISDN it seems!

I have no idea whether BT *want* it used yet, so all disclaimers
apply
;-) but it sounds like a public service when you call it...

Keith

There do exist versions of gzip and tar which will work without Mint. I know because I've used them. I think I've since replaced them with Mint-happy ones, but they definitely do exist. Check atari.archive.umich.edu, in the ./Archivers directory, not the ./Mint directory.

True...However, it seems that tgz'ed files are regarded as some
monstrosity, which no ordinary person can possibly decompress. That's
simply not the case. I will agree that tar is _not_ the world's most user
friendly program, and I don't claim to be able to use it well at all. I
do, however know how to view and extract from tar files, which is all I
need to know. Very simple guide:

gzip -d filename.tgz (to decompress tgz or .tar.gz file)
tar -tvf filename.tar (to view contents)
tar -xvf filename.tar (to extract contents)

That's all I've ever needed to know, and that information is readily
available.

I've just been given 2 sc1435 monitors! I was told they were used on a TT. I have one presently hooked up to my STe and it works as a normal ST color monitor only larger. Does anyone know any more about these monitors and where does the small audio type jack plug into? I think it should go into one or the other of the adio style plugs on the backof the monitor, but hate to take a chance that I might be wrong! The person I got them from had never used that part of the cable and didn't know either! Any info would be appreciated!

Shouldn't your driver software handle this? ICD has a utility I know,
can't recall if HDDriver does or not, but I had no problems with
removable media under Geneva using either ICD or HDDriver and simply
pressing the eject button on the Syquest 270 I had at work.

Annius does know of the problem, but can't work out what's causing it.
Could it be different versions of zoo? Or even different download methods
(I got it using Netscape on my Mac).

I didn't have any trouble unarchiving it, so it can't be the program
itself. It works fine for me, though under MagicMac it tends to crash
rather often (mainly after making a selection).

Well if they ever ask! Then I would tell them that ScanLite from Dr. Bob
and Coalesce from \/\/izworks Both work with the Golden Image hand scanner
and the scanning tray! Scanlite also has hooks that let other programmers

utilize it's feature in there programs, like MVG (Multi Viewer Graphica)
and Straight Fax!

Hi anonymous,

>the ratio of compatibility is under at 10%
This isn't a test.

Name the programs and what they do.

programs which bypass the operating system and hit the hardware almost must
fail. Some programs ignore programming guideline and therefore fail.
Now you see the reasons for the existens of such guidlines.

A lot of games depend on undocumented hardware properties. Programs
mustn't depend on hardware properties.

Regards,
Gerd

5276. For Sale: Atari Mega ST4

Cross-posted to: comp.sys.atari.st,alt.music.midi,misc.forsale.computers.other.systems,misc.forsale.computers.other.misc

For Sale: Atari Mega ST4 Computer

Includes: 4.0 Mb RAM, TOS 1.2 in ROM, Blitter
Keyboard with cable (a couple of keycaps are missing).

You'll Need: monitor, mouse, standard power cord.

I'll throw in: Atari Megafile 30 hard drive without disk
mechanism (uses regular PC RLL drive) + cable.

Asking CDN$175 or US$150 including shipping.

(Note: I can't do COD to the USA, so American bidders must be
willing to use other payment methods, eg. 50% up front.)

Send e-mail to rjg@nfld.com, or call (709) 745-3277.

5279. mounting and unmounting devices in MiNT

Newsgroup: comp.sys.atari.st
Date: 1996-09-22 00:00:00 UTC
From: comezana@math.psu.edu
Message-ID: <522g89$1n3@dodgson.math.psu.edu>
Source record: 137325

What is the correct, safe way of changing cartridges of removable disk HD's under MiNT (short of rebooting)? Is there anything analogous to Unix mount and umount? Any tips will be appreciated.

Gustavo

5280. SC1435 monitor

Newsgroup: comp.sys.atari.st
Date: 1996-09-22 00:00:00 UTC

I've just been given 2 sc1435 monitors! I was told they were used on a TT. I have one presently hooked up to my STe and it works as a normal ST color monitor only larger. Does anyone know any more about these monitors and where does the small audio type jack plug into? I think it should go into one or the other of the adio style plugs on the backof the monitor, but hate to take a chance that I might be wrong! The person I got them from had never used that part of the cable and didn't know either! Any info would be appreciated!

Well if they ever ask! Then I would tell them that ScanLite from Dr. Bob
and Coalesce from \/\/izworks Both work with the Golden Image hand scanner
and the scanning tray! Scanlite also has hooks that let other programmers
utilize it's feature in there programs, like MVG (Multi Viewer Graphica)

and Straight Fax!

Annius does know of the problem, but can't work out what's causing it.
Could it be different versions of zoo? Or even different download methods
(I got it using Netscape on my Mac).

I didn't have any trouble unarchiving it, so it can't be the program
itself. It works fine for me, though under MagicMac it tends to crash
rather often (mainly after making a selection).

They were probably used on a Mega STe, since the TT can't use them (wrong sync rate). The 1/8" stereo plug goes into the Falcon's headphone jack. You can use a stereo RCA cable to hook the monitor speakers to a TT or (Mega) STe. There are two speakers in that monitor for stereo sound. There are 2 RCA jacks on the back of the monitor, they should be marked L and R.

Shouldn't your driver software handle this? ICD has a utility I know,
can't recall if HDDriver does or not, but I had no problems with
removable media under Geneva using either ICD or HDDriver and simply
pressing the eject button on the Syquest 270 I had at work.

Mr. Maddog (mrmaddog@prolog.net) wrote:

As fot the low compatibility ratio (10%) one has to sy that the emulators never quite aimed to fully recreate an Atari ST, but rather are a means of running the opearting system and the priograms that run under the operating system of the Atari ST, under DOS/windows/Mac/Unix. As most of the games circumvent the usage of TOS and adress hardware directly, they will not work on the emulators. This is also th case with Atzari itsself; Try to find out how many ST games run on the TT.

I got it right as well. I remember I downloaded it from ZFC's WWW-page, but
I don't remember what kind of format it was compressed in. But version 1.22
is on my harddisk, in full working order.

As for downloading it, and putting it up elsewhere- no can do.
This is what Annius Groenink of ZFC has to say
(in the "readme" file that came with version 1.22):

Welcome to this free version of the last commercial release of Edith
Professional. This is the full version.

COPYING

Copying is only allowed for personal use. Distribution of this version
is strictly prohibited. You are allowed to use this version for
personal use, provided that you obtained it either through mail or
electronic mail directly from ZFC, or immediately from the ZFC web
pages.

Use Zmodem instead- much faster and probably more reliable as well.
Get a proper terminal program such as "Connect" for your ST. I use it every
day and connect up to my Internet provider's UNIX machine.
You'll certainly find that "Connect" is worth the money asked for
registering it- you also get a printed user manual when you do.

If you want to check it out you can download it from just about any Atari
FTP site around. Version 2.46 is the current one- there's also an
additional file for a bug-update or something. Be sure to download that as
well.
You'll be able to use the downloaded copy for 30 hours. After that you have
to register it to make it continue working (and get additional features).

Correct except the MultiSync Gizmo is manufactured by chro_MAGIC Software.
And it is available from your local Atari dealer or direct from
chro_MAGIC. Unfortunately, the monitors that will work with both VGA and
RGB resolutions are getting harder to find.

Are you talking about the Gem desktop? Can you see the long names from within
a shell? The Gem desktop doesn't support long file names, so you will have
to use a replacement desktop, like Thing or Gemini, in order to see long file
names on the desktop.

>Any wonder who got people yelling, "I am angry!" :)

You don't need MiNT to use gzip and tar. These things works perfectly
under normal TOS.
First un-gzip the file with -d {name of the file} e.g -d edith.tgz
then un-tar with -x {name of the file} e.g -x edith.tar

Hope this help

That came out a bit work.

I mean. On GFA i seem to do it like this:

```
If a$="asdl"
print "Hello"
ENDIF
```

But on STOS and Hisoft I have to do it like this:

```
If a$="asdl" then print "Hello"
```

>>
>>>I've never put down Hisoft Basic, as I've never tried it. However as
>>>STF put GFA 2, and then GFA 3 on their coverdisks... GFA Basic very

>
>As to contacting ICTARI.... oneday :)

I'll test things for people.

Also, does anyone know how to get a Flash on HiSoft and GFA?

There is a Photochrome Slideshow program available that works on teh
St in 4096 colours and 32,000 odd on the STe. The weird thing is that
IIRC correctly it was written in some obscure (probably defunct)
language called STOS and it was by Darran Tapplin and I also have a
another program which shows packed photochrome pictures which was
given to me by Martin Cubik or someone, I'll stick them both in an
email to you in a sec. TTFN.

I've used tar and gzip no problem under plain TOS. You just need a shell
for best results...

A 720kb disk formatted on the PC will be readable on the Atari.
A 720kb disk formatted on TOS 1.4 and upwards will be readable by the
PC.

Another solution would be to hook up the computers via a nullmodem
cable, and transfer the works with two terminal programs.
Be sure to set them at the same BPS speed, usually 19200 is the
highest available on the ST.

I hope you'll be able to import those files to the PC application,
check the export formats available in the ST app and see if they match
any of the import formats in the PC app.

From: p-abel@imaginet.fr
Message-ID: <843515916_OASIS_@imaginet.fr>
Source record: 137357

I don't have a CD ROM reader on my Falcon, and I want to read a CD PHOTO. So I made a copy of a little representation (160*100) of a picture with a MacIntosh. But anyway I can't read it on my Falcon. In the file, there is the indication : "Quicktime and a PHOTO CD viewer are needed". I have tried to read this file with GemView, and with the PARX's RIM PHOTOCD.RIM but they don't recognize the file format. On the Mac, it seems that it is a PICT file.
Do somebody know what do I much do ?

It's crazy isn't it. MS-DOS seems to look at the boot sector and
dismisses disks it doesn't like or just makes assumptions and gets
upset if those assumptions turn out to be wrong.
On an MS-DOS note. Can anyone explain why when formatting a disk
MS-DOS 'checks existing format' and 'saves unformat information'.

Rich.

The first example works perfectly on HiSoft BASIC version 2 - and there are
Falcon extensions in HiSoft2 as well.

Beyond that, I don't quite see what the problem is with using IF-THEN when
multiple THENs aren't needed - I mean, why do an IF-ENDIF if there's only one
line of THEN stuff to process anyhow?

Source record: 137168

Some time ago I purchased a used copy of WordUp with the hope of someday learning to use its graphic capability. For a long time, though, I was happy with WordWriter and WordPerfect. Now that I'm finally getting to WordUp, I seem to have run up against a wall and am entirely unable to get it to print at all. What I have is an Atari Mega4STe, with an HP DeskJet 500, all pretty standard stuff.

When I installed WordUp, I tried to install the DeskJet driver, but was told that it only comes with TurboJet (anyone know where to get that?), so I went with the Epson FX-80 driver (I have the emulator cartridge in my DeskJet). Nothing. It works neither in graphics mode nor in text mode. Until I moved a .TPD file into the same directory as WordUp, attempting to print in text mode bombed the computer, now it appears to print, but nothing comes out. Graphics mode also bombed the computer until I exchanged the GDOS.PRG in my auto folder for another one I had lying about, and now IT just looks like it's working and nothing comes out.

Any suggestions? WordWriter still prints just fine.

ADVthanksANCE,

Years ago i used to play a risk-style game called 'Colonial Conquest' which, as far as I know, was only available for the ST. Can anyone recommend an emulator (for a PC) which I can use to run the game and where I might get a copy.

I know its a long shot but if anyone can help with any info (such as the publishers name) I would be very grateful.

Cheers,

>
>1) When did Atari Corp. officially cease to exist?

Officially? It hasn't. However, there is _one_ employee left working
on Atari matters - John Skruch. Jack Tramiel has little-to-nothing to do
with everyday operations. John's primary focus is handling licensing.

>2) Did a Tramiel have the guts to announce it publically or did they do
> it quietly.

See above. It's all been done quietly.

>3) What is the name of the Tramiel's next victim?

Atari merged with JTS Corporation, makers of 3" hard drives. The new
company remains JTS, including the stock symbol. ATC dies with the merger.

>4) Has any of the old Atari employees with net presence (Bob Brodie,
> Alan Pratt, Ken Badertscher (sp?), or Eric Smith) ever enlighten
> this newsgroup about the Tramiel's shennanigans?

The newsgroup? No.

>5) Last I heard, Commodore went bankrupt. Did anyone buy all or part of
> it and produce Amigas again?

Yes, I don't recall the company offhand. Escom seems to ring a bell, and
I think they recently sold it off.

>6) Did Atari computers outlive (in terms of being produced, sold, and
> supported by a company) Amiga computers?

I don't believe so.

>7) How many of you have been in this group since the late 80's?

Have no idea, but not me. Early 90's.

Here's the article on how to make your own connection from the ST to a multisyn
c monitor:

MULTISYNCH MONITORS
COLOR AND HIGH RESOLUTION MONOCHROME
DISPLAY FOR THE ATARI STs

COLOR BETTERS THE ST'S SC1224

Most multisynch monitors, but not all, will work with the ST's RGB output and vertical refresh rate. Advantages are operation in high resolution monochrome and both low and medium color using a single monitor. An additional advantage is the better color rendition with more differentiation in tonalities. Subtle shades are better represented than on the ST. With Sony color monitors, the colors are Kodachrome in quality -- rich and saturated. On the negative side, none of these color monitors will match the sharpness of the Atari SM124 monochrome monitor. This monitor, as with other monochromes, uses single pells or pixels to represent screen images. Color monitors must use three (Red, Green, and Blue) to form the same point on a screen. As a consequence, they cannot give the crispness and detail.

THE CRITICAL TEST -- MONOCHROME SHARPNESS

If you use monochrome most of the time, as many do with Spectre Macintosh emulation, the major question is whether or not a softer and coarser monochrome display on a color monitor is acceptable for continuous use. It doesn't make sense or cents to buy one of the lower priced multisynch monitors as an economy measure just to obviate the need for two monitors where high resolution monochrome is important. And the purchase of a higher quality and higher priced monitor in the $600 to $650 range -- such as the Sony 1304 HG or NEC 3D may not make much economical sense either. However there are those who continue to have the desire for these types of monitors -- unfortunately, I am one.

MONITOR SWITCH BOX -- ROLL YOUR OWN

The following pages give pinouts and wiring diagrams for construction of a Monitor Switch Box so that a multisynch can

be used in both color and monochrome with the ST's monitor output. The box is needed to ground the Monochrome Detect line from the ST and force it to boot in high resolution monochrome. It also switches from the ST's RGB color output to Monochrome Intensity output to drive the monitor. The pinouts for all three Sony monitors (1302, 1303, and 1304) are the same. NEC monitors such as the Multisynch and Multisynch II use the same pinouts. Where Sony and earlier NECs use DB-9 inputs, the new NEC 3D uses a DB-15 connector. The NEC pinouts shown are still valid for the 3D. A converter cable -- DB-9 to DB-15 supplied by NEC -- will give the proper interface. This converter is also availabe commercially as a one piece plug unit. Other

monitors, such as the Mitsubishi Diamondscan, use different plugs. The Mitsubishi uses a DB-25 which is the same in pins and shell as an RS-232. The ST's output can be routed to these monitors with the proper pinouts and plug.

The Monitor Switch Box can be wired for any monitor output configuration. If another monitor is used, a simple conversion plug is comercially available to reconfigure outputs if both monitors use DB-9 plugs. If plugs are different for two monitors, then wire a cable with the two different terminations. The least effort and highest cost approach is to buy a cable with one of the plugs already made up. If you are good with a soldering iron, then buy the connectors and makeup your own cables. The ST 13-pin DIN plug is not that easy to work with. The solder or rear side has pins just like the front, and soldering wires to these contacts is not a snap. ST monitor cables, with a DIN 13 male on one end and unterminated on the other, are available from two or three sources. Try Best Electronics or Practical Solutions. A 4-pole, double throw switch (On-On) will be required for the Box. Also fit the Box with an RCA jack if you want sound routed to a stereo or self amplified speaker like those available from Radio Shack. If you have Tweety Board, this will not be needed.

MARKET FAILURE OF SWITCH BOXES

There have been several attempts to market these monitor switch boxes, and all but the most recent have not met with success. The first reason is high price. The first box produced was overpriced in the $200 range. The second reason is differences in pinouts and plug configurations for the variety of monitor inputs. There is no standard. The third reason for lack of success is the small ST market for alternative multisynch monitors.

Making your own box for $35 or less in parts will give you an opportunity to try out several monitors at a dealer and select the one that is most acceptable for high resolution monochrome display. But a problem is that most dealers don't

have the more expensive monitors broken out for display, and you may not be able to give one a try. Be persistant. Ask the dealer if he can recommend a customer that has a monitor you are interested in. But by all means, try before you buy to insure that the display meets with your satisfaction. Don't take the word of others because each has different levels of acceptability.

MULTISYNCH MONITOR PERFORMANCE

I have tried the homebrew Monitor Switch Box with the Sony 1303 and the NEC Multisync and Multisync II. The 1303 is not the quality of the 1302 which has a finer dot pitch. However, the color was excellent but the monochrome display was soft. The Sony 1302 has a .26mm dot pitch. This is a measure of the

center-to-center distance between dots and is also an indicator of dot or pixel size. Until recently, the 1302 had the finest dot pitch of any color monitor on the market. And dot pitch is a better indicator of sharpeness than horizontal and vertical lines of resolution. The lines are also a function of screen display size; so don't be mislead by more lines resolution. It simply might correspond to a larger monitor display size. And as the monitor size
increases, the dots are made larger and render a less sharp display.

But Sony is less than forthcoming in its specifications for the 1302. While touting the .26mm dot pitch, they don't publish the fact that this applies to horizontal spacing only. The vertical spacing is different, perhaps .32mm which is nothing to shout about. As a consequence, you may see black horizontal lines that separate the color display lines. They are not dramatically obtrusive, but they are there. On the plus side, the Sony's have that superb Kodachrome color that is richly saturated. The blacks are black, and the background in monochrome is absolutely paper white. The 1302 is satisfactory for ST monochrome use.

This model is being superseded by the new 1304 HG that has a .25mm dot pitch. The specifications on this new monitor closely match those of the Apple Color Monitor for the Mac II. This monitor is made by Sony to Apple's specifications, but it is not multisynch. I use one on a Mac II and it is excellent in both monochrome and color. Because of the closeness in specifications -- the only two monitors available with a .25mm dot pitch -- I strongly suspicion that they are the same. Sony has simply adapted the Apple version for multisynch use. And if I were to place my money on a monitor that would be highly acceptable for monochrome display with the ST (sight unseen in an actual test), it would be the Sony 1304 HG. When viewed in color on an IBM PC, the dots appeared extremely fine and it

appears that the .25 pitch holds true for both vertical and horizontal.

The 1303 is not as good as the 1302 or 1304. However it did give a good monochrome display that was similar in size to the ST's color display in medium resolution. Although good, it does not come close to matching quality of the SM124. Since I spend at least 60 percent or more of my time in Spectre/Macintosh operation, I felt that this was not acceptable for my requirements. When switching from color to monochrome, the screen picture sizes must be readjusted. When the color picture fills out the screen, the monochrome picture will be half screen size until it is adjusted. The Sony controls are in the rear, making them very inconvenient for this operation. The NEC and NEC II have their controls on the front. When making adjustments, insure that horizontal positioning is correct. When first tested, the NEC seemed to have ghosting with the character display. However this was because the screen had wrapped around and required proper positioning. The NEC display was also good. But it was not

the equal of Sony in color -- more pastel and less saturated.

Both the Sony 1304 and NEC 3D now have automatic screen sizing when displays are changed; so this should eliminate annoying adjustments. Additionally, both are improved over earlier models. Both would perhaps make acceptable choices for monochrome use on the ST. But I would still think that the Sony 1304 would win by more than a hair if it is anything like the Apple Macintosh monitor. Perhaps a dealer will break one out for testing when they become more plentiful and prices drop.

Sony 1304s are discounted for around $645, and 1302s for $575. NEC 3Ds are lower priced at $585. The Mitsubishi Diamond scan can be found at $499 and sometimes lower. If the 16" Nano FlexScan is a true multisynch, those who want everything can get it for just under $900.

The following should get you started on a switch box so that you can perform your own acceptance testing. I have not tried a Princeton Graphics or Mitsubishi Diamondscan since I felt that their displays with the IBM PC were not the match of the Sony or NEC. It wasn't worth the money or effort for such a change, and a promise was made a long time ago not to compromise and throw money at something you wouldn't be satisfied with. Climbing out of that hole is too costly, and I have paid this price in both camera and stereo equipment -- but never again.

This plug is available in most electronic supply stores. One end is DB-9 Female for connecting to the box's output cable, and the other end is DB-9 Male that plugs into the Monitor or the DB-9 to DB-15 cable for the NEC 3D. The converter has a small printed circuit board with jumper wires to make the proper input/output configuration. The pinouts shown above are for a switch box wired for Sony output and their conversion to output configuration for a NEC monitor.

MULTISYNCH SWITCH WIRING ST DIN 13 OUT TO SONY DB-9
4-POLE DOUBLE THROW ON-ON

:.....: :.....:

Center poles of switch (labeled as RED, GREEN, and BLUE OUT)
are common output to the Sony monitor through the DB-9
connector. When switch is thrown to COLOR side (lower contacts),
the ST's RGB output is fed to the common output center poles.
Monochrome Detect has no output in COLOR. With the switch thrown
to MONOCHROME (upper contacts), Monochrome Detect is grounded and
Monochrome Intensity is fed to the three RGB outputs. Horizontal
and Vertical Synchs are fed straight through from the ST to DB-9
connector. Thanks to Mike Odegard for the original circuit in
file #5617 uploaded in January 1988. It works much better than
my circuit that didn't use resistance.

5334. STfm memory upgrade question

Newsgroup: comp.sys.atari.st
Date: 1996-09-23 00:00:00 UTC
From: Bill Phillips <billp@emrtc.nmt.edu>
Message-ID: <3246CDD0.3694@emrtc.nmt.edu>
Source record: 137180
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

OK, I found several versions of the ST memory upgrade using SIPPs, SIMMs, etc. All were quite straightforward and without too much peril. However, one article mentioned that I might have to upgrade my MMU...is there a part number that I can reference to tell if I need to do the MMU upgrade? I already have all the parts for the memory changeout to SIMMs, but don't want to start until I'm sure it will be successful on the MMU side.

Again, thanks in advance for any and all info!

Nope. The 286 on Falcon Speed is a SMD. You can
run Windows 3.1 quite nicely and DOS as well.
Windows 95 is said to have problems however.
While booting Win 95 it is said that when you
fall asleep waiting for it to boot, Freddy
Kruger comes from behind, shoves your head into
your monitor, and screams "Welcome to prime time
bitch".

Sorry, I couldn't resist:)

Can anyone provide a clue to what is happening here?

All of a sudden my wife's Falcon throws up launching Calamus.
It says:

```
-------
|Calamus cannot be started.
|
|Error.
|Not Enough Memory!
|
|To continue, press any key.
-------
```

But her Falcon has 16MB in it and it passes the boot time
memory test.

HS> Sysadmins go around rearchiving stuff in order to save 3 bytes and
HS> alienate the only people interested in downloading it? Rather than 3
HS> bytes they could save a helluva lot more by dumping the lot than
HS> giving us this inaccessible load of all tosh. And that's not to
One point to make Harry. The problem with these "less popular" formats being
corrupted is down to the fact that they aren't listed in any standard
mime.types files and therefore get misinterpreted as text.

All that is required by the relevant system admins is to append the relevant
mime types onto this file and then issue a
kill -HUP 'pid' where pid is the process id of the root httpd process so that
it is aware of the new types and how to handle them.

Not much effort, its just a case of making it as easy for those admins to do
so that they can't have any excuses! :-)

I've recently been doing such at work and it is so easy.

From: bjr@edison.ebicom.net
Message-ID: <525dak$p1r@einstein.ebicom.net>
Source record: 137217

I recently moved up to a Falcon and have decided to sell my old
ST hardware. Please email bjr@ebicom.net if you're interested in
any of the items below. I am located in Columbus, Mississippi (USA).
The prices listed are not necissarly "FIRM", but please keep any
bids "reasonable". I've been watching the usual asking prices on
these items pretty closely, so they should be fairly well in line.

For an offer of $450 + shipping I'll ship you everything below. Also,
on a package deal, I will set everything up so that it is plug and play
ready. Atari Works, Warp 9, NeoDesk 3, InterLink ST, and a lot of other
basic utilites will be installed on the hard drive and ready to run. All
software included in the deal includes origonal floppy disks and
documentation. I will also toss in a number of games.

Items I'll take for trade...SVGA Monitor...LARGE FAST SCSI drive (1gig&up)

Atari 1040STe, TOS 1.62, 4meg RAM, Atari Mouse - $150 (3 years old)

Atari SC1224 Color Monitor - $75 (Excellent Shape)

Atari 14" Monochrome Monitor - $75 (1 year old...like New)

Atari SM124 Monochrome Monitor - $15 (Keeps blowing fuses???)

Super Charger MSDOS Emulator, 1meg installed, DOS 4, DMA Cable

ICD AHDI+ SCSI card & Software - $30

Segate 5.25" 80meg Hard Disk - $30
Drive is an older model, but works well...NO BAD SECTORS

Chinon 525 2X SCSI CD-Rom Drive - $75 (1 year old...like new)

Hacked up 2 bay SCSI case, 300W PC power supply - $25
(I took the back off to fit in a bigger/better power supply)

DMA Cable $10

C-Lab Unitor II - $75

Epson LQ-500 printer, 180 dpi, tractor feed, single sheet feed - $50
printer has only had one ribbon run through it, a little age stained.
Parallel cable included.

From: bjr@edison.ebicom.net
Message-ID: <525fbd$p1r@einstein.ebicom.net>
Source record: 137219

I finally purchaced Diamond Edge after years of putting it off...
Great piece of software!

One partition, out of my whole system had tons of lost clusters on it!
The partition in question was converted into a minix partition, and later
taken back to a GEM partition when I learned it wasn't nearly big enough
to fit my "MINT" needs. It became the holding tank for Oasis, and for
the WWW package once taking it back to a GEM partition.

When I ran Diamond Edge on said partition, it came up with over 50
"lost cluster" files...and I'm just wondering...out of couriosity
what most likely caused this. I rarely use Oasis/NOS anymore...
but I suspect the culprit is either Oasis/NOS, or the transition from
GEM to Minix to GEM. Any ideas?

Thanks,
Brian

Message-ID: <525i5c$ptv@einstein.ebicom.net>
Source record: 137221

Aloha,
I'm looking to buy some software that I can use with my
Falcon to create, edit, and transfer samples to various formats
and various instruments. I've seen some of the general flyers
for Clarity, but still have quite a few questions about it.

1. Exactly what sample formats does Clarity support? What all
can it read and write?

2. What instruments does it support besides MMA Sample Dump Standard?

3. Can Clarity do SMIDI transfer?

4. What are the maximum sample rates?

5. Will it work okay with DSP speed ups...mods...(i.e. FX, or
AfterBurner)?

6. Precisely what editing functions, FX, etc. does it have?
How good are they?

7. Is it Multi TOS / Magic / Geneva / M_ROS friendly?

Thanks,
Brian

I am using a normal terminal programm on my atari (like connect,
rufus,...). It's important, that it supports somethinh like Z-Modem
Filetransfer.
Then on the unix I have the programms SZ and RZ, (SZ = Send Z-Modem, RZ
= Receive Z-Modem). The filetransfer is fast and without problems.
Of course you could also use STIK and FTP if you UNIX-System supports
SLIP (mine doesn't).
As you are probably working on a college UNIX system, SZ and RZ might be
already installed. Try it!

good luck,

harald

I have got a program called "sync". I am not sure what it does. I think
it came with some MiNT package of some sort.

Running it has no visible effect, but it sounds like it might be the right
thing. Let me know if you want it uuencoded by email (~16K).

Otherwise, I have found that waiting about five seconds after any write
operation at least makes sure that everything is written to a Minix FS.

Chris, I had major dry-joint trouble with my Falcon (C-Lab MkII) before I had the 3.5mm jacks replaced (the one that they used in the shop for the demo had exactly the same problem). Your problem sounds slightly different, but if you're using the Falcon's built-in A/Ds, it could be down to this.

5355. Trading ATARI ST(e) games - Please READ!

Newsgroup: comp.sys.atari.st
Date: 1996-09-23 00:00:00 UTC
From: thehidden@ludens.elte.hu
Message-ID: <1996Sep23.113631.31573@ludens>
Source record: 137227

Hello Atarilovers,

Perhaps you haven't read any letters like this for years, and Atari ST is now out of fashion. So, I'm speaking to that few people who are mad of this kickass computer. I would like to trade with ATARI ST games (I have about 200 of them...) via internet, e-mail, snail-mail or what. I'm also interested in STe and Falcon 030 games. Please let me know if you're interested. My e-mail address is thehidden@ludens.elte.hu (Yeah, you're right, I'm hungarian!!!), but if you reply to the actual atari newsgroup, that's all right too.

So, here is my list of Atari games: (sorry, some of them run only on STe...)

3D CONSTRUCTION KIT, 3D POOL, A.G.E., A320 AIRBUS, ADDAMS FAMILY,
ADVANTAGE TENNIS, ALCATRAZ, ANOTHER WORLD, ARCHER MACLEAN'S POOL, ARKANOID,
ARKANOID II., ASTRO PANI, ATOMINO, ATOMIX, BACK TO THE FUTURE II., BALLER,
BATTLE COMMAND, BATTLESHIPS, BATTLETRIS, BEVERLY HILLS COP, BLACK CAULDRON,
BLOCK OUT, BOLO, BOOLY, BOUNCING BOUBLES, BRAT, CAESAR, CANNON FODDER,
CARRIER COMMAND, CENTIPEDE, CHESSMASTER 2000, CHIP'S CHALLENGE, CHUCK ROCK,
COMBAT, CONQUEROR, CORPORATION, CROWN-O-MANIA, DAMOCLES, DARKSIDE,
DEFENDER OF THE CROWN, DEUTEROS, DRAGONS BREATH, ELITE, ELVIRA, ELVIRA II.,
EMLYN HUGHES INTERNATIONAL SOCCER, ENCHANTED LANDS, EPIC, F-16 FALCON,
F-29 RETALIATOR, FASCINATION, FEUDAL LORDS, FORMULA ONE GRAND PRIX,
FREAKED OUT, FROGGER, FRONTIER - ELITE II., GAUNTLET II., GET DEXTER II.,
GOAL!, GOBLINS, GOBLINS II., GODS, GOLDEN AXE, HISCON RESCUE,
HOLLYWOOD HUSTLER - (DEMO), HOOK, HUDSON HAWK, HUNTER, INDY HEAT,
INTERNATIONAL KARATE+, ISHAR, ITALY '90 - WINNERS EDITION,
JIMMY WHITE'S SNOOKER, JOAN OF ARC, KICK OFF, KINGS QUEST III., KNIGHTMARE,
KNIGHTS OF THE SKY, KWIK SNAX (DIZZY!), LANDMINE, LEMMINGS,
LEMMINGS II. - THE TRIBES, LETHAL X-CESS, LIFE AND DEATH,
LITTLE PUFF IN DRAGONLAND, LODE RUNNER, LOGICAL, LOOPZ,
LOTUS ESPRIT TURBO CHALLENGE, LOTUS III. - ULTIMATE CHALLENGE,
LOTUS TURBO CHALLENGE II., LURE OF THE TEMPTRESS, MAGIC POCKETS,
MANIC MINEFIELD, MATCH-IT!, MAUPITI ISLAND, METAL MASTERS,
MICROPROSE FORMULA ONE GRAND PRIX, MICROPROSE SOCCER, MIDI BATTLE,
MONTY PYTHON'S FLYING CIRCUS, MR DO! RUN RUN, MURDER, NACRO POLICE, NAVY SEALS,
NIBE, NITRO BOOST CHALLANGE, NO EXIT, NO SECOND PRIZE, NORTH AND SOUTH, NOVA,
OH,NO! MORE LEMMINGS, OIL IMPERIUM, ONE STEP BEYOND - PUSH OVER II.,
OPERATION HARRIER, OXYD MAGNUM, PACMANIA, PANZA KICK BOXING, PIPEMANIA,
PIPETRIS, PIRATES!, POCKET BIKE, POLICE QUEST, POPULOUS, POPULOUS II.,
POWERMONGER, PREHISTORIK, PREMIER MANAGER, PREMIER MANAGER II.,
PRINCE OF PERSIA, PRINCE OF THE YOLKFOLK (DIZZY!), PUSH OVER, QBERT, QUIK,
RAILROAD TYCOON, REALMS, REFLEX, RICK DANGEROUS, ROBERT IN THE FIRE FACTORY,
ROBOCOP II., ROBOCOP III., ROBOTZ, ROCKSTAR, RODLAND, RVF HONDA, SAVAGE,
SAVAGE II., SAVAGE III., SENSIBLE SOCCER, SHADOW DANCER, SHADOW OF THE BEAST,
SHADOW OF THE BEAST II., SHANGHAI, SHANGHAI II., SHUFFLEPUCK CAFE, SIM CITY,

SIM CITY TERRAIN EDITOR, SKULL DIGGERY, SNACMAN, SNOOPY, SNOWBALL, SOKOBAN,
SPACE CRUSADE, SPECIAL FORCES, SPELLBOUND DIZZY, SPHERICAL, SPOT, SPY VS SPY,
STARBALL, STARBLADE, STARIO BROTHERS, STONE AGE, STORM MASTER, STRATEGO,
STREETFIGHTER II., STRIKER, STUNT CAR RACER, SUPERCARS, SUPERCARS II.,
SUPREMACY, TERMINATOR II., TERRAMEX, THE FINAL BATTLE, THE GREAT GIANA SISTERS,
THE KILLING CLOUD, THE LIGHT CORRIDOR, THE LOST PATROL,
THE SECRET OF THE MONKEY ISLAND, TITUS THE FOX, TRADERS, TRITON III., TURRICAN,
TURRICAN II., UNSENSIBLE SOCCER v1.1, UTOPIA, VAXINE, VIRUS, VROOM,
WAYNE GRETZKY HOCKEY, WELLTRIS, WINGS OF DEATH, WINZER,
WWF EUROPEAN RAMPAGE TOUR, XENON II. (DEMO), YOGI'S GREAT ESCAPE, Z-OUT, ZOOL

And one important thing: I'd like to do this without sending money or asking
for some bucks...

Cheers,

The Hidden (aka Sebi)

(P.s.> Mark Love, if you read this message, please contact meeeeeeeee!!!)

Nonsense, of course .zip files can handle long filenames. You may have
a duff port of GNU zip that was built without long name support, but
it's nothing to do with the zip format.

```
Final list of exhibitors
For ATARI SHOWS 96

Saturday 28th September
Premier Suite
Motor Cycle Museum
Birmingham

Sunday 29th September
Osterley Four Pillars Hotel
764 Great West Road
Isleworth
Middlesex

Both shows 10am to 5pm

Admission price
3UKP for adults - 1UKP for children under 12yrs

Exhibitors (as of 23rd September)

Goodman's
System Solutions
HiSoft - (London Only)
FaST Club - (Birmingham Only)
Merlin
Calamus User
Upgrade Shop
Titan Designs
Black Scorpion
16/32
Best Electronics
Console Centre
Portfolio Club
Sunrise Audio Systems
Floppyshop
Atari Computing Magazine
Atariphile Disk Magazine - (London Only)
The Wrinklies User Group - (London Only)
The Maggie Team
UK Assoc of Atari User Groups

If you have access check out:
http://www.netkonect.net/tachyon/shows96

To give myself and the other exhibitors some idea of the likely
attendance, could you please Email me before Thursday 26th September, if
```

you are definitely coming to either show:

Please state which venue:

Email fd18@dial.pipex.com

(To date it seems like a 50/50 spit between London and Birmingham)

:-))) Sounds cool.

I don't know what this has to do with that MagiC can't understand what
to do with a GTP (or is it MagiXDesk's fault?), but it sounds nice. ;-)

Do you have something against Ease, Andreas? :-)

Of course! Silly me. I wasn't aware that GEM/AHDI partitions were ms-dos
compatible. I knew some of the floppies were.

I am currently borrowing a friends HP5L printer and I need to know two
things:

#1 where is that utility that I remember reading about that emulates the
control panel via the atari Control Panel or as an accessory?

#2 Has anyone had any problems using the 5L with Calamus to print out
pretty complex pages at 600 DPI? (I think I need more memory, but I don't
really want to buy it for a printer that is not my own...)

Thanks,

Steve Miller

Another possibility, though potentially more involved, is to run Ghostlink. Use an ms-dos emulator on the Unix box to run its executable. I don't know if it would work or not, and I am assuming the two computers are local to each other. Of course using the serial port on an ST for large file transfer is a pain because it's so slow, anyhow. You might try getting the modems out of the loop as well. Just use a null modem cable between the machines and a Z modem package.

>
>What can I do to ground the MegaSTE to eliminate the noise.

It's a bummer isn't it? The audio circuitry in all STE machines (MEGA or 520/1040) isn't properly isolated from the rest of the system (cost-cutting?) and so interference creeps in. You can try a filter, but that's not the ideal solution. If you're an electronics bod maybe you'll know how to rip out the sound subsystem and isolate it?? My MSTE is connected to an amplifier and the line noise really pisses me off!

> back of the monitor, they should be marked L and R.

You can use these audio inputs for any line level audio source. ie, you
could hook up your cassette or CD player, and have background music while
you compoot away. Of course, then you don't get the keyclick, etc., from
your compooter. I recently did a MIDI demo at the Atari club, and used a
520fm for sequence playing, and hooked an MT32 synth module directly into
the SC1435 stereo inputs. Three units to make a show!

Yes, I want a count of people, and I want people to look at my web
pages. That's why I said Edith is free, but you are _not_ allowed
to distribute it to others. You can get your personal copy directly
from ZFC.

I put the ZIP file people from c.s.a.s. compiled, on the ZFC web pages.

Lost clusters are usually caused when a program has written a file to the disk, but the system crashes before TOS has had a chance to completely update the directory tree. Either that, or TOS was in the process of deleting a file when a crash occurred. This effect can be worsened if you use a hard disk driver with delayed write.

A lost cluster is essentially an area in the File Allocation Table that has been marked as being in use when, in fact, there is no file using that cluster. A recovery program will usually create a file with a dummy name that contains these clusters. Deleting the dummy file (after checking to make sure it's not anything worthwhile) will free up the previously lost clusters.

Having switched to/from a Minix partition would probably not be a contributing factor, since that requires zeroing-out the partition.

You'd need a splitter if you don't have RGB outputs on the VCR. The cheapest I
have been able to find is still more expensive than a decent 19-inch video
monitor. Sell the SC1224 if you don't need it and buy a small TV set.

Quietly. As usual.

>3) What is the name of the Tramiel's next victim?

JTS Technologies, I believe - but in this case, the victim may turn out to be
the predator.

>4) Has any of the old Atari employees with net presence (Bob Brodie,
> Alan Pratt, Ken Badertscher (sp?), or Eric Smith) ever enlighten
> this newsgroup about the Tramiel's shennanigans?

The reason these guys were so visible is that they have the self-restraint to
NOT speak ill of the devil. I don't think Bob Brodie, in particular, would say
a bad word about a guy who mugged him on the street.

>5) Last I heard, Commodore went bankrupt. Did anyone buy all or part of
> it and produce Amigas again?

I think they're still in production, and while I don't recall who bought Amiga,
I suspect the NewTek guys probably did.

>6) Did Atari computers outlive (in terms of being produced, sold, and
> supported by a company) Amiga computers?

If you use the term "supported" loosely, then yes. Atari Falcons are still in
production - under license to C-Lab, and they actually fixed all of the known
problems with the design, too.

There are also a couple of high-end workstation TOS clones - the Hades and
Medusa (in several configurations).

>There seems to be a problem in FAT? Itried UNDELETE profram that didn't
>work either.....

If you have been working on the original and not on a backup, you are probably
out of luck.

However...

First, try using an image-type backup program to make a copy of the disk
(FastCopy is a good example). Then put the original in a safe place - you
can't do anything with it now, but if you screw up the copy, at least your
original will not be any further damaged.

Next, use one of the various "boot fixers" to write an MS-DOS boot sector on the
disk.

Lastly, try Diamond Edge and/or CleanupST to recover the FAT info so that you
can access whatever is on the disk.

If all that fails, the next and final attempt will involve manually copying each
sector to a new file on another disk. Plan on spending a couple of days at that
IF you know what you're doing. If you haven't done it before, you may want to
consider hiring a professional data recovery specialist, if the tax data is
worth a whole lot of money.

And now you know why the expression "backup early and often" is repeated so
much. Sorry.

Actually, a company by the name of Escom (German, I believe) bought the rights to Commodore, and last I heard (from my dad the Toaster freak), they recently stopped trading, or Amiga production, or both.

> >6) Did Atari computers outlive (in terms of being produced, sold, and

I guess I'd have to agree here, since there are still Atari clones in production and I know of no Amiga clones.

>GEM to Minix to GEM. Any ideas?

Typically this is down to a crash or a reset but can be caused by
other circumstances such as the user killing a multitasking process in
mid-flow.

It is best to think of a file as only existing once it is closed.
Before that, clusters on the disk may get written to and these are
marked off in the FAT as "used". This is made more complex by
information being held in memory buffers until it _has_ to be written,
speeding up file operations considerably. If the file never gets
closed, for whatever reason, those clusters physically marked as used
on the disk remain "used" by a file which does not exist because it
was never closed. Thus they are "lost" to the filing system forever. A
disk editor like Diamond edge goes in under the filing system linking
them together in such a way that the filing system can see them as a
normal file, which you typically drag to the trashcan, whereupon they
become available again. i.e file not closed = lost clusters.

50 lost clusters is nothing to worry about. I can get 100's 'cos I'm
forever killing applications off from MagiC's program manager. :-)

I suggest that Annius compresses into one of the more common formats which
won't clash with Netscape or whatever. I use .ZIP and only that all the
time for files that I upload to my FTP area. That way I know that anyone on
any platform can de-compress them.
I've never understood the need for these strange formats like .ZOO.

Perhaps I should mail Annius and suggest this to him...

>
>It is a unix like OS that is MUCH easier to use with GEM frontend...

True, any GUI for Unix, like X, is far easier to use than command line. I certainly prefer using Solaris's admintools for users administration rather then using the unix shell. GEM can certainly do the same for MiNt what X does for Unix.

>
>I'm aware of how GEM can slow MiNT, but I'm no unix guru. Command lines
>are NOT my favourite thing. I believe that a lot of unix software ported
>to Atari has been ported badly...

IMHO, if they are just a port, they did a good one. If you're thinking of GUI versions of utils, then lots of work still need to be done. I am just presenting a better option for you. If you prefer using GEM interface then by all means use it.

>I haven't given up. Its just that Tar.ttp has f...ed up my work drive! :(

I have been using tar for all the MinT software I get from the net. It have not fried up my HDD yet. FYI, the one which I used was from GNU port, in fact I replaced most of the normal unix command with GNU version as IMHO they are more stable. The reason why I think so is because the GNU programs are created by ppl not only on Atari but also on other platform. You may want to do that as well, just some advice, I don't advocate GNU or anything. If anything, I think that GNU stuff are too bulky, eats by RAM like there's no tomorrow, etc.

>average Atari user who is used to GEM. A PPP based web browser would be
>simple if MiNTnet was compiled to work under MagiC or single TOS, yet we

I agree with you. If only those guys from ASH or someone would work on a PPP for MagiC. The STIK group is doing alot of good work, but most ISP is providing PPP only. I for one, don't use STIK for one simple reason, no ISP support.

>easier to use. MiNT and MiNTnet are that powerful, but they are so
>difficult to use that it scares many (me especially) people away because
>it is so complex.

I think most of MiNT developer are doing it as a hobby & curiosity rather than for earning a fast buck. As such, I think they didn't think of making it user friendly but get it working as a main objective.

>I think that guys like yourself are well meaning in your dislike of the
>PC, but are scaring others away from Atari because of your insistence on
>making things so different (and difficult I might add). Time for a

>reality trip I think...

I do create user friendly programs... just look at them at my home page, all GEM no command line proggy.

It's those MiNT distributors who may be scaring ppl away. I cannot think of any reason why they use tar rather than STZIP but it may be because STZIP does not support long filenames and the MiNTNET programs does have some long filenames. Why long file names you ask, it because they are preserving as much Unix like as possible (I am guessing this) and it does not life a bit easier for people like me who works with Unix (as well as MSDog/windows/NT) as the setup then becomes something that I am familiar with (as in which file to look at etc).

I understand that you may not be at the same level as me in Unix but it will help if you can get someone who knows Unix for help. Personally, I found that installing MiNT/Minix/MiNTNet a breeze once I applied my Unix knowledge on it. No I have not installed PPP.

Regards
William

In article <557153565.6557.505.starship@3rdplanet.com>, starship@3rdplanet.com says...

I have succesfully installed this TOS 4.92 on my HDD, but it does need a boot floppy disk. The instructions on the readme may not be too specific but it's like any other developer's TOS (the other one I had was TOS 1.4beta for my old ST).

You need to install a boot floppy disk which have a AUTO folder in it. Inside that AUTO folder, copy your HDD driver and the CAUTO_M.PRG which will redirect booting up sequence to your drive C. The HDD driver should execute before the CAUTO_M.PRG, as after the CAUTO_M.PRG, all subsequent readings will be from the HDD drive C. Rich Tietjens attchment below explains why this is so.

Once you load the new TOS, it will begin to read from the floppy. It will load your HDD driver (you see the signon of the HDD driver) then the CAUTO_M will kick in. It then continues from your HDD for your normal C drive AUTO programs.

HTH.

>
>I could be mistaken, but it seems obvious to me that, if you load a different
>OS after booting, you'll need to reload your HD drivers. After all, you
>can't bind your drivers to an OS that isn't loaded yet, and after loading,

>either boot the OS from floppy, or reload the HD driver after loading the OS.
>You shouldn't be able to reload it from the HD, because as far as the OS
>knows, you don't have one yet.
>

What you say is true. It's just that TOS 4.92 should be made to search for the BOOT RECORD of the HDD rather than just go to floppy drive. It may be because it is a pre-release version, so this function is not in yet.

The trick is to format your floppy on the IBM in double density format. As the
IBM is real picky on the format, it is best to let it do the job of formating.
The Atari can read floppies formated by the IBM PC, even WinNT format as long
as it is in FAT format.

Get the MSdog docs on formatting a double density (720K) floppy disk.

Regards
William

I don't know if it is your case, but I would like to add a little thing ...

For users of MintNet, I recommand to kill syslogd before to turn off their computer. Like that, syslogd close his message files and you can turn off properly. In the other way, I found a lot of lost cluster on my partition (it is a TOS partition but I think the problem is same on minix partition).

For this reason, I have a little SH script 'exit.scr' on my partition which I launch before to shut down my Falcon. It contains this line :

: any solutions out there? No i don't want to buy an IBM!

You shouldn't have to. There's absolutely no reason your provider should
have to know what sort of system you're running, unless you need tech
support. If you can do your own tech support, you should be OK. Of
course, PEI _is_ rather small, and I suppose it is possible that there
are no providers that allow a simple dial-in shell. In that case, you'll
have to go with either STiK or Mint/MintNet.

There were VME cards produced in Germany a few years back, but are unfortunately not made anymore, and are therefore rarer than hen's teeth, and much more valuable. A few months back, there were rumblings in comp.sys.atari.st.tech about a home-brew card which hooked up to the cartridge port, but I don't think anything's ever come out of that :P

We have a real bad problem with a PowerMac running MagicMac and Calamus SL. Printing times on an Epson color inkjet can exceed 25 minutes per page (360dpi) even when the page contains just a few frames. I would like to know if anyone uses Calamus SL on a Mac and has a solution to long printing times.
We have tried tech support, but they can't help us.

Do you mean that standard Atari desktop wouldn't show the long filenames? or
am I reading this wrong? If so, then I'm afraid that it is not possible to
display long filenames with Newdesk/desktop as it is not designed to support
them!

You will need a replacement desktop (such as Thing) to display long filenames...
Shells, such as SH, BASH should all display it properly though (as would Freedom,
the only file-selector [AFAIK] which shows long filenames).

(an unsolicited testimonial--DK)
Don't sell yourself short, Richard. I have WP4.1 for the ST, purchased in January 1989. I wrote my doctoral dissertation on it (on a 512K 520ST w/no hard drives) and had no problem bringing the disks over to print it off at the computer lab using WordPerfect 5.1 for DOS and HP Laserjets. Yes, there will be a few formatting differences to clean up, but you can certainly read these documents with WordPerfect 5.1 for DOS and WordPerfect 5.2 for Windows. Going from the PC to the Atari version is less successful, although there is a utility called WPSwitch (at Toad Computers and (?) elsewhere) that takes care of that.

Richard Wegner wrote:

What kind of account do they offer? If they do offer a shell account,
then they don't need to know what kind of computer you own, because ANY
computer with a modem and terminal software can access a shell account.
If they have a real SLIP account, then you could get the CAB/STiK
package. And once again, no need for them to know what kind of system you
own. If they only have a PPP account, you may be stuck with your system.
I may be wrong, because I haven't used it, but software like NOS and
MintNet need a lot more than 1 meg to run in. Don't let any ISP tell you
that Atari's aren't capable of accessing them! Any ISP that offeres SLIP
or a shell account will do for small Atari systems such as a 1040ST, and
for systems with more memory, CSLIP and PPP access is also available!
Someone at the ISP I am on once gasped in amazement because I could
actually get my Atari to connect and use their account! So if they tell
you this, chances are, they have no idea what they're talking about. Of
course, I could be wrong. ;)

Could be the DMA chip (28?pin chip at the back end under the disk drive on
an fm). I've also had some success in similar cases by pushing the TOS
chips further in. BTW, which are the MMU and Glue chips?

Likely causes: Bad shifter, bad RAM. The shifter is easier to check/replace...

You may be able to copy all the files onto 2 1.44 disks, but you will still need to boot from the original Disk 1 - that's the problem with copy protection. And one of the reasons I don't play games much.

> What is the difference between a 520 and a 1040 cause i want to buy one but
> don't want to end up with a machine that can't do all i want!

520=1/2 Meg of RAM. 1040=1Meg. Get a 1040. There are many programs which won't run fully, if at all, on a 520. Also, most 520's came with single-sided drives, which is another serious bottleneck.

> if i buy a 520 can i upgrade it to a 1040??
Both RAM and drive mechs can be upgraded, but it's probably not worth the cost and trouble, if you can find a 1040.

> and is there anyone that has good games and other software??

Several people list software for sale here regularly, esp. games. I have some myself, such as Timeworks Word Writer, Data Manager and Swiftcalc (spreadsheet). CeeJay software sells used hard- and software, as does Ben Smith, who posts here frequently.

>On an MS-DOS note. Can anyone explain why when formatting a disk
>MS-DOS 'checks existing format' and 'saves unformat information'.

Well, it's not strictly on-topic, but...

This is one of the good ideas that actually made it into M$ products. I forget what the other one was.];^)

When MS-DOS version 6.+ formats a disk, it first checks to see if the disk has already been formatted, and if it has, and there's enough free space, it saves the old FAT and folder info in an "invisible" file (not just hidden, but completely non-accessible in normal ways). Then, if you later decide you've made a horrible mistake and you simply can't LIVE without that JPEG of Princess Di in her bikini, you can "unformat" the disk and restore the old contents - IF you haven't written anything else to the disk yet.

I have no idea where M$ stole, er, first encountered this idea.

any solutions out there? No i don't want to buy an IBM!

<END>

Dave, I would suggest you look in alt.internet.services and try to find someone
who offers shell accounts. In theory, you ought to be able to do it with SLIP
running STiK and Antmail, but a shell should be less expensive and if all you
want is email and news, that's probably suitable.

Where is PEI, anyhow? What does it stand for?

```

Sort of. There should only be one ===== (or -----) line before the start of the encoded text, and it doesn't matter if there's anything after the last one. ESScode will choke if there's more than one ===== line at the beginning (or anything else at the beginning), but it doesn't seem to care if there's anything extra at the end.

:
: I just dl'd Edith yesterday, and though it has a .gz extension, I can
: confirm that it : is a .tgz file. Maybe they changed from .ZOO to
: conform to the format they use for all : the Unix versions they have.

They have apparently always had a zoo version and a tar gnu-zipped
version of the file available. The zoo version was only compatable with
some zoo archivers and not others. They have very helpfully added a zip
version of the file, which did the trick for me.

It is a little confusing because the gnu-zipped archive is in the first
directory, and the other two are in the second directory, labeled "other."
Then, you have to contend with the fact that the filenames are chopped off
on the web display of that page, so you can't easily tell which is the
zoo version and which is the zip version. The first is the zip, the
second (it has a different icon) is the zoo.

Greetings,

I am wondering whether there are utilities to deal with Iomega ZIP drive/disks with Atari computers. I seem to remember that ICD may have released some programs to facilitate ZIP usage. Also, which hard disk utilities are best suited to ZIP drives (HDDriver, ICD Pro SCSI)? Are there any limitations or concerns that one should be aware of?

>and is there anyone that has good games and other software??

If they are "stock" machines, the major difference between the two is
available RAM. The 520 has half a meg and the 1040 has a meg. Some
1040s have an internal floppy drive while the 520 uses an external one.
There may also be differences in the ROM-based OS versions. Most likely,
both machines will have the stock TOS 1.0 unless they've been upgraded
to TOS 1.4 (Rainbow TOS). All-told, the machines are essentially
identical other than the differences mentioned above.

If you buy a stock 520, it can be upgraded to 1, 2.5, or 4 megs of RAM.
The 1040 can be upgraded to either 2 or 4 megs.

Is there a university on the island? That would be a good place to
start. Not many providers want to expose themselves to a shell account,
but you can do PPP and POP with NOS. I'm using OASIS 1.35 and NOS_POP.

You might try checking with local information departments in places
like Charlottetown and Summerside or trying to get information from the
provincial government.

If someone still offers uncompressed SLIP (not likely as most providers
are probably too new) you can use CAB for WEB Browsing.

Yah, there were at least two versions of the TTRAM daughterboard. The TT only
needs non-parity SIMMs, but parity SIMMs will work just as well. Due to the
vagaries of memory supply, and the fact that PCs use parity RAM, and more
people buy PC RAM in general, parity SIMMs can often be found for cheaper
than non-parity SIMMs, even though they technically have more memory on the
board. If the cost to you is about the same, I'd suggest buying the parity
SIMMs, because you never know when you're going to want to pull 'em out of
the TT and stick 'em in another machine.

One last point - regular SIMMs are "fast-page" mode. The TT really needs
"nybble" mode SIMMs to allow the 68030 to use burst mode accesses. But,
almost nobody today even knows what nybble-mode SIMMs are, let alone sells
them. This may be one reason why Toad's TT expansion is so expensive. (I
don't really know, I haven't checked to see if they are selling nybble mode
SIMMs or regular SIMMs...)

Thats debatable. There still is a reason to buy an Amiga if its going to be
used as power supply for the video toaster.

Heh. Well I got it to install using a Minix floppy instead of the RAM
disk, but once the thing boots, there is only about 370k of free RAM.
Can't even read a man page... Anyway, I'm gonna have to talk to the guy
who was supposed to have mailed me an extra 2mb RAM by now... ;P

Try ftp.fu.berlin /pub/atari/mint/contrib-package/kgmd-1.0/ .

There is also a pop3 client that showed up there a month or so ago. I believe
it was in the /mint/mail/ directory.

NOS (possibly Oasis) does this ALL the time, I don't really know what
causes it but when NOS crashes I get loads as when ending a session
with news still running so I guess it's just data that hasn't be
recorded in the FAT/Directory properly and is just a bit of data stuck
on the drive.

There are some DOS programs that can read 10 sector disks and the 82
tracks that a lot of ST games use as well..I don't know the programs off
the top of my head but will endevour to find out...Using these it should
be possible to copy the games across to either the HD or another
floppy..formatted in the more limited way of the pc..

Yes, at least STZip does. I've ZIP'ed several files in UNIX (my net provider uses UNIX, so I work within that environment when I'm online), and un-ZIP'ed them on my STe. The filenames have come out right when unzipping, but if they've had the same names as other files (well, at least when truncated to 8+3) I've been asked if they should be renamed or overwritten.

Otherwise the filenames will just be truncated to 8+3.
(I use STZip 2.6)

Go to my web page (Atari section):

http://home.sn.no/~hallvart/pages/atari.html

If you scroll down that page you'll find a whole little section
devoted to Mint/Linux and STonX with several links to various
KGMD directories.
Good luck!

Permets moi de te r�pondre dans notre belle langue, que j'aime pouvoir
utiliser sur ce r�seau si anglo-saxon.
S'il faut quicktime, c'est qu'il s'agit probablement d'un show quicktime
de fichiers PICT, fichiers aux r�solutions du Mac. Deux raisons peuvent
gener la lecture sur Atari : les noms longs s'ils sont utilis�s sur ce
photo CD, d'une part, d'autre part la r�solution ventuellement ne
correspondant pas aux crans ATARi et qui perturbe Gemview.
Tache, grace un driver de CD performant comme extendos pro ou scsi tools
de r�cuperer le repertoire de ton photo CD. et Tente ensuite de les
convertir en format plus atarien. Si tu peux, sinon, tu pourras toujours
le faire sur Mac, r�cup�rer les fichiers produits, par exemple en TIFF, et
les relire sur ATARI...

Yes !

an old but good program may do this very well, it is "WERKS", which was
produced by HISOFT. It is copyrighted and can be found also in the Lattice
C package.
Good Luck.

>> I need help in adding a Blitter to my 1040 STf.
>
> The existing MMU and GLUE should be fine. You'll need a utility to
Further, there are some solder jumpers to be removed near to the solder pads where the PLCC socket for the blitter is to be installed. I don't know how good Mike's soldering skills are, but this is not a trivial task, and the socket is a non-standard one AFAIK.

> explicitly turn the blitter on, I believe, and I don't know where to
> look for one; that's included in TOS 2.05 and later, and I don't have a
> blitter in my TOS 1.04 ST (yet) so I have no direct experience there.
The blitter will be on unless switched off in software, the control is found in one of the drop-downs on the standard Atari desktop, saving a desktop.inf file with the blitter off will make this the default setting (although I don't know why you'd want to do this!)

I did have a lot of trouble with the AdSpeed (and Hypercache) accelerator cards getting them to work with the blitter, I eventually removed the blitter and remade the solder links.

Speak to 'ya later!

I just dl'd Edith yesterday, and though it has a .gz extension, I can confirm that it is a .tgz file. Maybe they changed from .ZOO to conform to the format they use for all the Unix versions they have.

Well, a 060 would be nice indeed. :-)
I have heard rumors about someone who has replaced the 040 on his Afterburner
040 (the only 040 board for the Falocn030 so far) with a 060, but if it's
true or not... I guess not. :-)

The question is if you want to run Falcon030 progrmas as well, or if you
only want to run regular Atari programs. The Falcon030 is different from the
others as it has got a DSP.

I would go for the Hades if I were going to get one.

> > But there are atleast 3 differnet 040 and 060 Atari clones.

Well, I don't have the adress with me. :-(
BTW. I was told that the DirectTT is actually the same machine as the
Hades. :-)

> What OS do they run? I mean do they come with the basic TOS??? licensed from
> Atari?

They run TT TOS, 3.06 and I you can also run MiNT + N.AES on them to get a
true multitasking and more. I'm not sure if MagiC works or not.

>
> To this newgroup I hope. This newsgroup is my major channel to find more
> about the platform at the moment.

If I hear anything I will tell post it. BTW. I do have some info. It's
called "Cent40".

CPU : 040-66 (replacable with a 060)
DSP : 56302-66 (single cycle instruction set -> 66 MIPS, code comp. with 56001)
Bus : PCI, 32 bits, 32 Mhz (128 Mb/sec)
Peripheral controller : 68300. 32 bits controller, using its DMA channels to
transfer data from RAM to peripherals, from peripherals to RAM, and also from
RAM to RAM, which makes it a 32 bits DMA blitter...
Graphics : PCI 24 bits board (Miro)
HD controller : SCSI
HD : 800 Mb SCSI
RAM : 8 Mb (ext. to very much)
Voice synthetizer.

The Operating System will be VDI compatable, so every properly coded
application will run ok on the Cent40 (temporary name). The VDI is already
finished, and it's faster than NVDI, when ran on a Falcon 030-16, with a tight
and slow bus, and a CPU charged with the display. Just imagine what it'll be,
once ran on a 040-66, with a PCI bus, and a graphic board... :O

The predicted price is ~ 800 UKP, which is really cool, I think...

Centek will make a mailing at the end of September. If you wanna be
mailed the definitive specs, just ask them. If you have an e-mail account, tell
them, it'll be easier for them... Here is their adress :

Centek
28, rue des Sorbiers

s > even know if it is 100% ATARI content or what...

CURRENT NOTES has been around for over ten years, and was one of the first Atari-oriented magazines that appeared in North America. Last year, Joe Waters, the original founder and editor, sold the magazine to Howard Carson and Robert Boardman, two regular contributors, who then moved the operations to their native Toronto.

As a contributor to the mag, I can definitely point out that articles on all aspects of TOS/GEM computing predominate - from new software releases, news of interest to the Atari community, tutorials on using software, and hands-on testing of new hardware and software (we tend to test things to death here - recent reviews included the Keyboard Gizmo, The Atari Compendium CD-ROM, and head to head tests of major text editors and formatters - we're going to be doing a review of the new Computer Direct DirecT60 TT clone within the next couple of issues). We also look at new aspects of what's going on out there regarding new technology and what it means to Atari users. Currently we don't have articles on programming, but we always welcome contributions from authors - I personally think that articles on this subject would be an excellent contribution and might kick-start some interest in programming among our readership. A STOS tutorial would be nice :)

Oh, yeah, we also produce CURRENT NOTES on two Ataris using Calamus SL - a BlowUp FX-modified 14mB Falcon, and an 8 mB, accelerated Mega4 with a 19" monitor. We tend to practise what we preach :)

Better hurry, Tony, and get one of those trial issues - I think you'll be quite pleasantly surprised by the content.

It's 3M, and I'd have to ask Martin Crommie the model number - I have ten 60 meg tapes and haven't seen the need to get anything larger while I am using unregistered shareware (priorities, y'know).

>I would like to attempt #3, but am wondering if anyone has any advice.

Aha! Here's the original!

The 1040 and the megadrive (if that's a "Real" ATari product and not a
third-party device) should work fine on 110v - the switching power supply is the
same in both, and it works fine in my son's Mega 2 ST.

I would not, however, venture to try it on the monitor. A used monitor is far
less expensive than the deductible on most fire insurance...

It's at:

ftp.demon.co.uk

in either

/pub/atari/oasis

or
/pub/atari/new (maybe newitems, can't remember offhand)

I think it's in the new directory as this hasn't been sorted out since
Frank Charlton stopped maintaining the Atari section at Demon.

I purchased one of the Atari TT's from Don Thomas warehouse clearnace
sell and am interested in upgrading the memory in my TT.

I know the TT ram is on a seperate board since it was loose and not
connected (so I had no TT ram when I first got the TT). I plugged the
board back in and it appeared to use standard 30 pin simms.

I would like to know, Can I simply remove the 1 meg SIMMS and replace
them with 4x9 30 pin simms with parity and then have 16 megs of TT
ram. Additionally, I am purchasing a used SLM-605 to use with
Pagestream and I believe it needs ST ram for this printer.
Is there an easy and no expensive way to upgrade the ST ram also?

Please post any responces here or e-mail me at

Hi all,

OK, this might be a real stupid question.

My mate has just got a 2nd hand Epson RX-80 for his STe. There's no manual or owt with it so I showed him the one from my old FX-80 on how to set the dip switches.
Then we found the problem, where the hell ARE the dip switches on an RX-80 ?!!

Before we remove the entire case to find 'em, does anyone know where they are please ?!! :))

Thanks,
See Ya,
Paz.

> Unless someone does know different?....but I doubt it,

My brother did a lot of hacking of F1GP and never tried anything like
that.
Before I bought my Falcon he said that if I did get one he would make
a version of F1GP that could be run off harddrive. When I reminded
him of this he went all quiet and refused. Oh well.
It is irritating that the ST version was the only one that will not
harddrive install. For some reason MicroProse decided that the ST
suffered from piracy worse than the Amiga.

Of course you do only need 3 of the 4 disks. The 2nd disk can be
booted, so missing out the intro sequence. With a second disk drive
after boot disk 2 only disks 3 and 4 are used.

Rich.

> Good Luck.

If you want to convert the resource file entirely into C source code so
that you can compile it into the executable and ship a program that has
_no_ .rsc file then yes there is at least one program that does this.
But I can't remember what it was called! It was Australian and the
particular release I used had a couple of small bugs so that you had to
make a few edits in the output. But it worked. I converted a complete
resource with menus, icons, buttons etc into C source and built it into
the program instead of using an external resource file and rsrc_load
with little trouble. Of course the executable gets bigger by about the
size of the resource file. And it means no-one can edit the resources to
change the language (for example). This might be what you want!

5488. Partitioning problem

Newsgroup: comp.sys.atari.st
Date: 1996-09-25 00:00:00 UTC
From: jhovila@muikku.jmp.fi
Message-ID: <52agpi$9c9@teeri.jmp.fi>
Source record: 137025

Hello!

I've been trying to re-partition an old, lovely 40 MB HD for my ST. The HD is an upgraded version of SH205, and the actual disk inside is (Nec?) D3142. I don't know the geometry of this drive, so I've been using the following WINCAP-settings:

- cylinders: 656
- heads: 7
- sectors: 17

- partitions: 20-10-10

I haven't given any other parameters.

Partitioning and formatting seem to work fine, but when I try to do the "bad markup" for the C-partition, I'm getting the error "Logical sector out of range". The other partitions work fine.

As far as I understand, this is the result of invalid WINCAP-settings. It would be nice to know the correct settings! Thanks! =)

>one of the reasons I don't play games much.

Well GP1 is one of my favourite games and you can safely throw away
disk 1 as it only has the slightly unimpressive intro sequence on it.
Boot from disk 2 and during the game you will only need disks 3 and 4.
I bung disk 3 in drive A and disk 4 in drive B no probs. If you have
only the one disk drive it should have disk three in it as you only
need to load from disk four when you change tracks. If you don't like
changing disks all the time just go for longer races.

I'd love to see GP2 available for the Atari, fat chance!

Gaz.

Source record: 137027

While were on the subject of lost clusters, has it been
determined if Diamond Edge (V2.04) is compatible with
HD Driver and SCSI Tool. With AHDI I didn't notice many
problems with its operation, but now it will find problems
where Correct (Kobold package) dosen't report any.
Truely I have found Correct to be very reliable and
don't really "trust" Diamond Edge to perform this
operation. It does seem to handle Defrag and Optimize
without problem however.

On 15 Sep 96, dooley@infomatch.com wrote:

d> Hello.. I need some help converting .wav or .spl samples to .iff for
d> use with Sequencer One..

I don't know Sequencer One, but if .iff is the same as .aif in use with
Cubase audio for example, then the best is tu use 525, a nice little
samples converter (shareware). I got it on a local BBS, but you should find
it on any good ftp (ftp.cnam.fr for example). Can't Sequencer One import
other formats?

d> I read in an old ST Format that you could do it with SoundLab 2

I heard of it, but never see it...

d> I don't have 2 but I have ver. 1.1 that came on a STF cover disk and

I remember v1.1 only handled 8bit samples. No way for my falcon.

d> Also is it possible to send a straight .zip file through E-mail?
d> Or does it have to be encoded with ESSCode?

I think it must be UUcoded.
Bye bye dooley@infomatch.com.

>If a$="asdl" then print "Hello"

In HiSoft BASIC v2.1, you should be able to do something like this:

```
if a$="asdl"
print "Hello"
end if
```

That will have identical effect to the example you give in GFA.

OTOH, when you only have one thing to do, you might as well use the second syntax (if a$="asdl" then print "Hello").

STOS only supports the second syntax, unfortunately.

>Also, does anyone know how to get a Flash on HiSoft and GFA?

What exactly do you mean? Do you want the screen to flash in some way? If so, you could try swapping the black and white entries in the palette (assuming you are in a palette based video mode) for moment before swapping them back once more.

In article <521n79$rim@orm.southern.co.nz>, chriswil@southern.co.nz says...

>: One thing to note is that MiNTNet have some files with long filenames.
>
>Does it? Why is this so? It seems so unnecessary!! Surely to goodness it
>isn't necessary to have long filenames in the archive!! The point is that
>how many of us are prepared to format a minix partition, and install a fs

I agree with you that it is a dumb idea to use long filenames when the ST especially GEM, alone by itself don't support it. Those guys who port over those programs should get their ideas buck up or noone will appreciate their hard work and even get cursed for doing it. Why can't they stick to good old IBM standard like 8.3 style filenames.

>driver that does long.file.names? This is not an option for some (me
>included). The guys who get miNTnet etc...working properly are full of
>praise for it, and quite right it is bullet proof when installed
>properly. However, when these guys start saying that it should be on

Not only that... installing it is a real time & brain cells killer... imagine that on some other system, just one click on a button (usually already highlighted, so no decision or thinking is needed) you have PPP, internet browser, news reader and email program all installed and ready to be used. It even dial out to your ISP for you, no need to fiddle around with settings, all are defaulted and 99% of the default works. Now, that is what I call user friendly! Those guys really have their thinking caps on and deserve to be the number one.

>everyones shopping list (and yes they do say this!), they seem to forget
>that a majority of Atari users cannot use minix etc...hence confusion
>reigns supreme when non-guru type Atarians attempt to install configure
>this stuff. I say that if it is hard to use then people should say so and

Someone should come up with better solutions for the Atari on this. Other more popular platform are light years ahead in the Internet arena, they are in the Indy race while we are still playing snake & ladders. You can get a feature-bleeding-out-of-the-ears browser for FREE, not shareware. And it integrate seamlessly into the OS as well. It's fully supported & announcement of next release already made. Support more than all of the Internet standards multimedia stuff.

>not try to get others into something that they may not be able to safely
>comprehend...
>
>Just for the record, I used TAR.TTP as according to the docs that came
>with it (used -xvf switch). TAR.TTP still corrupted my drive...do I hear

>a bug scuttling????
>

I sometimes think why I even bother to install MiNT/MiNIX/MiNTNet and use those .TTP programs when I can use far easier programs. One thing for sure is, I have move my MiNT stuff on to a REMOVABLE HDD rather than on my fixed disk. The only real reason for this is... that OS is taking up my space on my fixed disk.

Enough of this now. Surfing time.... not not on an Atari. ;-)

Regards
William

I guess that Apple coders are no longer the force they were either...how
long does it take to get Copeland out the door? Ahhh...never mind...let's
just go buy BeOS and force all those MacSuckers to "upgrade" all their
software to new re-compiled code..heh.

k> Could it not just be that .ZIP and .LZH _don't_ support anything other
k> than 8.3 filenames whereas most MiNT/MiNTNet stuff uses long filenames??

A good guess, but this is not the case. I've grabbed many a file from a
variety of sources and the archive fully retains upper/lower case characters
and long filenames within the archive. It's only when they get extracted to
my HD that TOS truncates the names.

t> work either...
t>
t> Any suggestions??????

Before you do anything else, write-protect the floppy and try to do a
disk-copy to another disk. I'd suggest something like FCopy3 which can
format and copy to the same format as the original. That way you're working
on a backup.

As far as the actual job goes, I can only leave that to someone else - my own
efforts have been unsuccessful in the past...

5505. HELP! w/alberTT

Newsgroup: comp.sys.atari.st
Date: 1996-09-25 00:00:00 UTC
From: bdc2@bdc2-ra.cwru.edu
Message-ID: <843629348_OASIS_NEWS@bdc2-ra.cwru.edu>
Source record: 137076

Can someone help? I have a TT 4+4, and got an AlberTT board for it.
Along with it, I got some software, that is supposed to work, including
a program 1024x768.prg (10/09/91) that is supposed to go in the auto
folder. I have a 15" NEC multisysn and a switchbox to go between the
monitor and switch the regular vga and alberTT output, with the proper
adapters there. At one point, several months ago, I KNOW I had it
running in partition I:, but never from the boot disk C:.
I had several other projects that needed more attention, and now
I wanted to get it working and I can't, anymore. I copied my whole boot
disk onto H:, and took all files out of the auto folder except NVDI 4,
and the 1024x768 program, and it still doesn't work. Taking out nvdi
doesn't help either.
Does someone have a WORKING AlberTT in his TT that can help? Was
there any later software for a driver???

HELLLLLP!!!!!!

Here's the most recent information I've seen publicly posted. Maybe you
could follow it up directly by Email to the author?

==========
arnor/protext #1988, from mtilley, 1123 chars, Jul 25 23:15 96

Protext relaunch

After a period during which Protext was not available for purchase, I can now
announce that we will be releasing Protext 6.7, initially for the PC. Retail
sales will be by mail order only to

Protext Software
39 High St
Sutton
Ely
Cambs
CB6 2RA

EMail enquiries to me as usual (mtilley@cix.compulink.co.uk)

Protext Software is a partnership of 4 people including myself and Gavin and
two others who will be handling the sales and distribution.

The copyright of Protext software is owned by my company Silverdock Ltd.,
through which some business sales and consultancy is conducted.

Protext 6.7 is a consolidation rather than a major update (and is not
significantly different from v6.6) , but we have thoroughly revised the
documentation for the first time since 6.0. We are working (albeit part-time)
on version 7.0, more of which in due course.

The relauch price will be about ?40. As this is a new venture, it is not
possible initially to offer discounts either for trade or upgrading from
earlier versions.

The documentation still covers the Atari version and we will release v6.7
shortly for ST/TT/Falcon.

Mark Tilley

Actually not bad going back and forth between PC and ST WordPerfect.

ST program has option to save file as PC WP version 4.2.

PC WP versions >4.2 can save to 4.2 format which can be read by the ST
version of the program (import from 4.2 option).

There are a lot of things not in 4.1, of which tables is probably the
biggest shame to be left out, but still quite a useful program.

Hearing that somebody was using it w/o hard drive reminded me of setting it
up for my son at university when he bought WP for his 1040. It fit on a
single disk, spelling dictionary on another. A few hassles when swapping
back and forth but quite usable.

Actually, mount doesn't need to know anything about partitions, only the
filesystem type. The partitions are already dealt with by the kernel.

Assumming it is a bad contact put a small piece of aluminium cooking foil
or chocolate wrapper ove the male connection and push the female
connection down over it... This will give a nice tight connection if you
do it right....

Ammendment to Final list of exhibitors
For ATARI SHOWS 96

Exhibitors (as of 25th September)

Goodman's
System Solutions
HiSoft - NOW ATTENDING BOTH SHOWS
FaST Club - (Birmingham Only)
Merlin
Calamus User
Upgrade Shop
Titan Designs
Black Scorpion
16/32
Best Electronics
Console Centre
Portfolio Club
Sunrise Audio Systems
Floppyshop
Atari Computing Magazine
Atariphile Disk Magazine - (London Only)
The Wrinklies User Group - (London Only)
The Maggie Team
UK Assoc of Atari User Groups

If you have access check out:
http://www.netkonect.net/tachyon/shows96

To give myself and the other exhibitors some idea of the likely
attendance, could you please Email me before Thursday 26th September, if
you are definitely coming to either show:

Please state which venue:

Email fd18@dial.pipex.com

To date it seems like a 40/60 spit between London and Birmingham.

Regards,

Mike Goodman

From: thechyld@pcc-uky.campus.mci.net
Message-ID: <843727376_OASIS_@pcc-uky.campus.mci.net>
Source record: 137089

I've installed my trusty Falcon into a DeskTopper case and I moved the floppy drive into one of the front 5 1/4 inch drive bays...The problem is that the original floppy drive is a dark gray while the DeskTopper's case is very white...My question is, since PC floppy drives are really cheap, can I buy one that matches the white color of my new case? Is there any specific brands that will or will not work with my Falcon?

Thanks in advance for any info! :)

Okay, I _thought_ I figured it out. Apparently the Navarone cartridge was causing part of the problem. One day, I started the Falcon up, played my unplug-plug game with the keyboard connector and it didn't work. I went through the whole cable and everything and it still wouldn't work. Then I realized I was getting a hum on my nearby radio and (don't ask me how) figured out it was caused by the scanner cartridge. I unplugged it and plugged it back in, and voila! keyboard works. I guess my second guess was right, some kind of capacitance issue.

War auch mein erster Versuch.
Aber Z-MODEM ist schneller. Dazu brauchst du sz und rz auf der AIX und
ein Z-MODEM-Faehiges Terminalprogramm (STalker,Connect) auf dem ST.
Oder ein sperates Proggy.

42Bastian

PS: Besser ist natuerlich Ethernet, das habe ich aber auch noch nicht
hinbekommen :(

This has been my first attempt too :(
But Z-MODEM is faster.
You need rz (receive) and sz (send) on AIX and STalker or Connect on
your ST. Z-MODEM allows blocksizes up to 8K.

All ST MMU's should be able to access 4 Mbytes.

There were supposed to be "faulty" MMU's in some ST's, where the ST only
came with <=1024 Mbytes & the factory felt that a MMU that could not
access the full 4 Mbytes was not a problem for the end user.

This may be a rumour, try the upgrade. If it does not work, & you are sure
the upgrade is o.k, then you can get replacement MMU from Best
Electronics.

If I remember correctly, it was Doug Little who made Photochrome, right?
So why not ask him if he wants to release the sources (if he hasn't
done it already). I bet that he would do it more than gladly so that
someone else could modify it to be a slidshow program! Its that easy
(maybe...)! :-)

>Just a question here. Does .ZIP recognize filename > 8.3. We _are_
>referring to STZIP (or PKUNZIP) here, aren't we??

I ftp'd Edith again yesterday, and noticed in the binaries
directory, another "other" directory, which I went too and in that directory
is a edith...zoo and an Edith...zip. When I tried to ftp the zip file I was
told I did not have permission, but I was able to ftp the zoo file, and the
tgz files as well. I managed to decompress the tgz files no problem.
I use 2in1 (excellant shell!) as my archive shell, and was able to gnu-unzip
OK. _But_ the tar file that was left, because of the 8.3 naming conventions,
did not have the tar extension, but was named Edith.221 (from Edith221.tgz)
therefore my TAR program wouldn't see it. By renaming it to Edith221.tar I was
able to decompress it into the Edith disk folder it creates.

Source record: 136910

>Also, which hard disk utilities are best suited to ZIP drives (HDDriver,
>ICD Pro SCSI)?

Any hard disk driver that supports removable media will be OK. In the case of HDDriver I know that it comes with a utility to enable/disable write and password protection of ZIP media.

>Are there any limitations or concerns that one should be aware of?

Your SCSI host adaptor must have parity checking enabled. The TT's and Falcon's SCSI adaptors do support parity but with adaptors for the ST/STE you will have to check the manual.

A Mega ST that I installed TOS 2.06 in (the hard way) had a similar problem. It turned out there were some wire scraps loose in the case that drove everything crazy. You might pull all the chips and blow it out with a can of air.

Ahh, I didn't know which accelerator. The lack of Fast RAM is what affects the other CPU indexes. I had a Speed Res for a while. The variable video clock is a very nice feature, I had 640X480 N.I. true color on my NEC 4D with just a few little graphics streaks across part of the screen. How well does your 16 MHz mode work? I could never get it to go, I think my Falcon at the time was sub-standard.

Just as well, I need to go out and find out about all the alternatives for ftp, http, news, and mail anyhow. If Netscape made an M68K version, I'd probably get lazy and let them do the work for me. Matter of fact, that is what I'm doing now, Netscrape on Win 3.1. Of course, it's so slow and kludgy on 3.1 that I am _finally_ getting going with Linux, so far I've got Minicom hooking up to Sprint Passport properly with a script file. Now for the tough stuff, PPP and all the helper apps. Unix is a little perplexing at times. If Mint isn't too far from Unix (which it doesn't seem to be), it's no wonder hardly any Atarians are using it.

I would (and did, though I charged a customer $40 for it, too) go out and get two DB-19 male connectors, two plastic shields and up to 6' of 20 conductor cable from an electronics shop (I wouldn't go more than 6' or link two cables together, things will tend to get unstable). Total cost is less than $20. Just make your connections straight across with the connectors oriented the same way (8 pins on top or 7 on top, both ends).

I don't think Toad or ICD would charge you more than $25 either. As far as the Mac monitor cable goes, I don't know what people are talking about, the standard Mac monitor connection is 15-pin, AFAIK.

Dan

Yes NOS normaly keeps files open until the news-session is finished.
If you have problems with crasches you can make NOS closing and
reopening the infile (BATCH.TXT) after each article by changing the
command "nntp safety off" to "nntp safety on" in STARTUP.NOS
Also the log-file (NOS.LOG) stays open until you exit NOS. To avoid
problems with this you can have it written to a RAM disk by changing
the path in the "log <filename>" command. If this command is commented
out you don't get any logfile at all.

AFAIK NOS is _very_ stable during normal use. Maybe you should check if
you have some program conflict or memory problems that makes NOS
crasch.

Yes, it is not the cleverest of decisions...

>those programs should get their ideas buck up or noone will appreciate their
>hard work and even get cursed for doing it. Why can't they stick to good old
>IBM standard like 8.3 style filenames.

No, its not them... they are not porting 'good old IBM standard' programs. They
are porting UNIX programs (as have PC programmers) which in their original form
have long file-names, and lots of 'dot-files' etc. to set up...

>Not only that... installing it is a real time & brain cells killer... imagine

>number one.

Yes, I have had a simular experience. (Stik/oasis/mintnet all would not work
with my provider, but run PC software, and it's all up and running - news, email
www... no need to even read the doc's - just click 'n' play!) What we need is a
descent installation program for Mint/Mint-net that comes with everything bundled
up ready to go - the install.sh script with MiNT-net (the version I tried -
not the latest) just didn't cut it on my system...

>Someone should come up with better solutions for the Atari on this. Other more

I agree... perhaps the authors of MiNT-net prog's should sit down, and write
some decent doc's and write a nice GEM-based installation program...

>popular platform are light years ahead in the Internet arena, they are in the

Huh... thats a good joke... How much space do PC's OS's take? or PC WWW browsers
for that matter? I agree that Mintnet is far from ideal, but you cannot use this
arguement if you are advocating being more like another OS which is even bigger...

>Enough of this now. Surfing time.... not not on an Atari. ;-)

hehehe....

Netscape 3 Gold running right now... :)

Or my Generic STOS Fixer... :)

NewDepack and a STOS Fixer should be standard tools for Falcon owners who
want to play STOS games... NewDepack may well be needed for other programs
as well (bloody Atomik... :)

>you not have to use Backwards to play commercial games? :)

Yep. :)

> And as for STOS games, a
>different breed, here's what I would do if I were writting one.

>There, that's the majority of the ranges. As for the Falcon, I would
>tell the user to ue STOSfix 3.0 since it fixes the program for the
>person's one machine.

No, no no... what you do, is you fix it with the 'Generic STOS Fixer'
(check my WWW pages) and it will be fixed for all TOS versions that
you specify - so, you can fix it for: (default setting shown below)

1.0, 1.2, 1.4, 1.6, 1.62, 2.05, 2.06, 4.0, 4.02, 4.03, 4.04, 4.92

Ie - ALL non-Magic (or patched) ST's, and also all Falcons...

TT Owners are the only ones who have to use STOS Fix 3, and the only
reason why there are no TT settings with GenFixer is that knowone answered
my requests for help getting TT settings! So there cannot be any TT
gamers out there interested in playing STOS games...

> On the TT, I think you 'also' have to run a special program to
> play ST games on the TT.

Yes, IIRC there are patches for the TT (for non-STOS games)

> And as far as Magic and
>emulators go, forget it! They were only made to run clea GEM programs
>anyways.

Magic, yes - STOS won't work with this. (AFAIK - I dont have Magic though)

However... STOS *DOES* work with the GEMulator (if fixed for TOS2.06 of course) and quite possibly runs under STonX. I will be testing this when I install Linux on my PC...

>Because of this, ST programmers have to 'try' to write to all platforms
>with the 520 ST as the lowest common denominator. AND you have to try to
>make it run on the higher-end machines like the Falcon, plus if it's GEM
>then it must work with a multitasking system.

If its GEM, then its a crime if it doesn't Multi-task, as all well written GEM progs will do this...

>In short, if I write a program I'll try to make it run on all models as
>possible as well as make use of the enhancements of the STe. Because YOU
>asked for it.... :)

STE enhancements are not too hard to integrate, but getting it all to work properly on the Falcon can be a problem. (eg. the reason that Heartland doesn't have the sample on the Falcon is that Atari re-defined one of the frequencies of sample playback, making it an 'off' state... clever...)

I do agree and now when MiNT-net is up to version 1.xx someone must do it!
Why do we struggle with buggy software when MiNT-net has been stable for
ages?

We have got this very powerful network stuff in MiNT-net that can do anything you
would ever want (SLIP/PPP you name it) to do and only 2% of the Atari people is
using it! It's a joke. :-\

>
> Ie - ALL non-Magic (or patched) ST's, and also all Falcons...

So why not MagiC as well??

And games can be made to run under MagiC without any problems. Just look
at Bad Mood for the Falcon. It runns perfect under MagiC launched from
any resolution with anything you want installed.

It's the best example of compatible game I can think of and it's the best
one too. Okey it's not ready, but who cares. It's damn beutifull to look at.
;-)

Anyway, it runs under TOS, MagiC 4/5, MultiTOS and on the FX-card taking use
of FX-RAM, 32/40 MHz accelerators, Speed Resolution Card, Afterbruner040 using
FAST-RAM 32/40MHz. You name it, Bad Mood handles it. :-)

It might even take use of the Nova card in the future.

> > And as far as Magic and
> >emulators go, forget it! They were only made to run clea GEM programs
> >anyways.
>
> Magic, yes - STOS won't work with this. (AFAIK - I dont have Magic though)

So go and get a copy of MagiC then! You wont regret it. :-)

5561. atari 520/1040 difference

Newsgroup: comp.sys.atari.st
Date: 1996-09-26 00:00:00 UTC
From: RCain@nest.demon.co.uk
Message-ID: <184_RCain@nest.demon.co.uk>
Source record: 136968

Hi rhkoster@worldonline.nl, on 24 Sep 96 you wrote:

r> What is the difference between a 520 and a 1040

520 - 512Kb RAM
1040- 1024Kb RAM

r> cause i want to buy
r> one but don't want to end up with a machine that can't do all i
r> want! if i buy a 520 can i upgrade it to a 1040??

It depends what you want to do with it! Most games will run in 512Kb and much
of the older software (1st Word Plus etc.) is happy with this.

There are numerous ways to upgrade the RAM to the maximum of 4Mb. Probably
the easiest and cheapest is to get something like the Marpet Xtra RAM board
which can be populated with standard SIMMs.

r> and is there anyone that has good games and other software??

There's loads of stuff to download and quite a lot of commercial stuff is
sold off second-hand.

Linux is interesting if you want a Unix station at home, NVDI is a must for
screen acceleration, and I am partial to Blow UP FX for improved video, speed
and a RAM expansion, all at one low price.

Well, then, lets get Netscape to recompile for M68K! After all, they're not
Microsloth, they might actually be cooperative. Imagine, one compile, and, boom,
they have a version for Amigas _and_ Ataris.

tomo wrote:

> -DTP

Calamus or Da's Layout. Kind of Depends on the Taste. There are other Programs as well.

If people don't need a DTP Program, but some program making theit works look best, I still recomend TeX especially LaTeX. Whith X11 (another good reason for MiNT) one can also use LyX. This seems to be the best solution for automatic Layout generation.

> -comms/modem/FAX

Connect, or Rufus, if you just need a Terminal. for Internet Access MiNTNet is best, but needs quite an ammount om Memory. The mostly used aternative to MiNTNet is STiK.

> -music

Cubase Audio, or Logic Audio are great Harddisk Recording Systems with MIDI Sequenzer delivered with them. Those Programs are complex and professional tools for Studio purpouses.

> -multitasking

IMHO MiNT is better than MagiC, but MagiC also runns on a Falcon. It still depends on what you need. If you need Internet acces, then MiNT/MiNTNet is definately the best you can get. Use N.AES, oAESis or XaAES as Multitasking Gem. DON'T USE MULTITOS!!

> -everything else which comes to mind ...(or simply include your Top 10 list).

Grafics:

GemVIEW actually can use the DSP for different Picture processing functions (most noticable: Jpeg decoding).

Photoline looks to me like the best professional Image Processor. I'm not shure about that, but I think, I hered somewhere, that it also can use the DSP.

All in all I must say, that there are only few programms apart from Demos and Games that use the DSP.

I forgot something: For all STiK Programms, that cann not use MiNTNet (or where this is not really recomendet, like CAB) use GlueSTiK. This Program looks like STiK to the Apps, and uses MiNTNet for communication. this is the best solution for CAB e.a..

And then there is this Multimedia Tool called Apex Media. I don't do things like Multimedia (real Programmers hate Multimedia), but everybody told me that it was a cool tool for that.

Christof

Well, dream on... They won't. I remember many people from the Linux68K
comunity trying to make Netscape recompile it for Linux68k... They
won't. Use Mosaic or Arena instead.

Christof

PS.: They won't spend money on a 68K Computer, if not much income can be
expected for it.

5570. st hard drive in UK?

Get PHotochrome V4... from Hensa.

dearchive and check the package out.

Inlcuded are a slideshow program for .PCS (photochrome files) and also a
.TTP viewer.

the first of these should fit your needs... provided you don't mind
converting the files first.

Hope this _finally_ answers your problems :)))

: really want to buy it for a printer that is not my own...)

Yes, it's time someone wrote a good driver for this machine for use with
Gdos/SpeedoGdos/NVDI, etc.

But with Calamus, most of the time it's just fine, using the most recent
HPLJIVMV.CDT driver. One problem I have noticed is that sometimes the
top half of a page of mostly print, will be fuzzy -- sort of like the
resolution expanded and the dots don't line up. The wierdest thing was
when I had a field of type overlaid with a raster area (for a border),
which printed just fine, but when I decided that I no longer wanted the
border and removed the raster area, it printed out fuzzy. I can't figure
this one out.

It was under discussion in news.admin.net-abuse.misc - seems there was an "open"
NNTP server at someone's office, and the person who decided to do this (might
have been Steve Winters @prime.org, it's the sort of thing he does) slammed over
20,000 cancels through the server over the weekend using a cancelbot that killed
messages based STRICTLY on the Newsgroups: line - apparently it was an attempt
to totally disrupt the 'net. The odd thing about it is that I had already
received all of the cancelled messages, so I got 'em twice. %^(

>

I agree, but put this in perspective: When they started developing games for the ST, hard drives cost as much or more than the computer - some of them were well over US$1000! Not many people had hard drives, and since the ST floppy was the fastest floppy on the market (and still is, actually), there was little reason to consider hard drives. When the prices on HDDs started to fall, most developers failed to notice - a typical situation for people who spend 12-18 hours/day with their noses pressed to the monitor, trying to find that last little bug in their code... And, of course, they had hundreds of hours of development time into their copy-protection schemes, and didn't want to change those, with all the added time required to make the games run from the hard drive.

So, the market shrank, as Atari users gravitated to serious applications for the ST, and games for the PC that most of us had also bought by then; the developers blamed the shrinking market on piracy (which was, as usual, specious - the volume of piracy has always been approximately constant, following the initial surge as the "learning curve" levels off after release of a new computer platform), and moved to a larger market.

For what it's worth, there are a couple of developers who were smart enough to make their software work with a "key" disk - Free Spirit Software was one, although their docs didn't make it clear. You can copy all the files from their games into a hard disk folder, and as long as Disk 1 is in your A: drive when starting up the game, it works just fine. If Disk 1 isn't there, you get a "rotten pirate!" message.

Others figured out that using a picture identification scheme (as in "Gunship") was easier than counting lines; still others developed a "password on the top of page so-and-so" system, which also worked well. And there are dongles, whcih are a nuisance but less so than any other scheme so far, and the hardest to duplicate for most pirates (although cracking the software remains as easy as ever).

Nothing will ever stop a determined pirate; copy-protection that discourages use of the computer to its fullest capacity will discourage sales. My software isn't games, but the few items that aren't freeware aren't copy-protected, either - they're keyware; the software works fine without the key code (which is to be entered into a config file ONCE, folks, it's not a big pain), but has more features if registered, and adds a little note to each message indicating the

registration status - a note that is visible only to those who no where to look for it. I think this is the best method of protecting software - let it run from any drive at all; if the key code is found, it's full-gonzo software, and if not, it's pretty decent demo ware.

I had my answer ages ago, dunno why the threads still going?, on
22/09/96 at 21.35 I posted a message to this group, thanking EVERYONE
for there help and suggestions, and told everyone that the problem was
now sorted,
Since then there have been numerous posts suggesting an answer
<smile>

To explain in a little more detail....I have had for some time
Photochrome apart from the once only try out, I never used it since,
It now turns out that there should also be a slide show with the
photochrome package...there isn't with mine and had it so long that I
have no idea where I got it from,
I have now been sent it, and had this suggested to me by numerous
people, it looks like it will do the job.....unfortunatly I haven't
had chance to try it yet, but it would seem its the one,

When I realized I must now have what I was looking for, I immediately
posted to comp.sys.atari.st

So......<smile>

Cheers.............!ynoT

Another thing you might try is to use cables from the VCR to the stereo that have ground (shield) connected at only one end. If you can solder, that's easy; if not, it's almost impossible.

Here's a simple diagram to explains what's happening, though:

As you can see, the 60 Hz (50 Hz in Europe) hum originates on the AC power lines (it doesn't matter which is Voltage ("Hot") and which is Neutral, one of the boogers is bringing in the hum), crosses to the amplifier via the shielding on the audio cables, and then "loops" back to the VCR through the ground path, either the AC Ground or the Cable ground (which seems to be the case here). You have to break that path in order to stop the hum - as demonstrated when you disconnect the cable. If you break the path at the audio leads shielding ("left/right audio ground"), you're dealing with only about 2 to 5 volts, so the danger is infinitesimal; whereas, if you disconnect the power line ground, you're dealing with voltages from 100 on up, and risking both your life and your equipment. Since you still have full grounding on all equipment, the audio signal doesn't require the shield to be connected at both ends in order to have a complete circuit path.

I hope that's clear without being oversimplified.

: there any limitations or concerns that one should be aware of?

HDDriver since version 5 (I think) has directly supported ZIP disks,
including password read and write protection, among other support for ZIP.
HDDriver is the best suited for ZIP drives, as ICD hasn't updated their
software in quite some time (I'm including the fact that they released the
ZIP tools for ICD Pro, which didn't fully support the features of ZIP
drives). I'm not aware of any limitations regarding HDDriver and ZIP
drives.

NEC model D3142:

Cyl 642
Heads 8
Sectors 32; Note, 256B Sectors

The Note is from the 'Comments' of my listing. Can it do 512 B
sectors? I don't know. Maybe there is a set of jumpers to set this on
the drive, maybe it's just software selectable.

Hope this helps: Rich Mier

What the Pippen or VaporSphere?? The pippen enjoys a quiet life in japan
as it has for a while...the Vaporsphere game didnt dissappear as it
never has appeared to begin with.....I hifure if they do ever release it
our jags will have decomposed to dust.

Ah...I think the point was that STOS games won't work under MagiC for
some reason. If BadMood happen to be a STOS game, then it is a big
technical breakthrough indeed. :)

I would love to get MagiC someday, but I'm still keeping my STe for games.

BTW, still waiting for the STe version of Bad Mood. :)

Ah heck, I hadn't heard of it yet! I just have the first STOS fixer from
an old coverdisk and STOSFix 3 from what STF was talking about. I was
going to ask about how many TOS's can a fixed program can run on the whole.
Looks like yet another thing for me to download :)

Sounds great! I was wondering if other non-STOS games will run as well.
But if I end up using MagiC under Gemulator then I'm back were I'm
started. Oh well...

Darn straight. Anything with a window, menu bar, and frequent AES calls
can multi-task. It's so freaking simple, for any GEM program that is.

Geez, I didn't even knew this. Since you have a Falcon with STOS working
on it, then you're the expert to ask. :)

Ok, since the game I'm writing will use DMA samples for the STe I was
wondering what way to do the same on the Falcon. But I'll get to that later.

>Likely causes: Bad shifter, bad RAM. The shifter is easier to
check/replace...

I have a similar problem with my 4MB RAM STf.
It had TOS 2.06 installed, and when we took that out it seemed to solve the
problem. But it has started up again.
When I turn on the power, the power light comes on but the floppy light does
not come on and it does not boot.
If the floppy light comes on it will boot, but then at some unspecified point
in time I will see either:
1) a screen full of vertical lines
2) 2 bombs
3) a combo of 1 and 2
4) a few vertical lines starting at the left
in any case, once this happens the machine is frozen, and I have to reboot,
and am unlikely to be able to boot the machine again for a while.
any clues?
is it the RAM?, or shifter? or. . .?
thanks.merci

The first issue of Atari Computing should have "gone to bed" by now; I regret that I couldn't make an announcement earlier, due to the net.gremlins eating the email, but...

I can now tell you that the magazine will run US$8 retail per issue, including postage. Subscribers may have the cover disk emailed to them, or for 50 cents extra per copy, a disk may be included in the surface mail, as you prefer. If I can, I hope to drop the extra charge per disk eventually - it will depend on the volume more than anything else (and finding a whole bunch of blank disks really cheaply!).

I am accepting subscriptions now for 3 or 6 months (US$24 or US$48); for the moment, I can only accept checks or money orders, but a credit scanner is hoped for soon.

Distributor inquiries are welcome.

>Do somebody know what do I much do ?

If you can open it on the Mac, and it thinks it is a pict file, could you not
save it as a tif file? If you can do that, you should be able to view in
GEMview, non?
It seems you made a sceen shot of the picture when it was displayed on a Mac,
that may be why it is seen as a pict file (although I thought pict was a Mac
vector format, and pnt was the Mac _bitmap_ format?)

I recently bought me a atari 520 st with color monitor(thomson) but now I'm very desperately seeking some games for it i.e chess program,platform games,little computer people etc. Is there anyone out there who can and will help me with that.
You could email me and attach some games on it
Thanks and greetings from Roelof Koster

well,
for a free copy from Denesh, it won't hurt ya to find out !ynoT.
but, to answer your question. . .
110% Atari :^)
-Infobits form Dan Dreibelbis(round up of world wide Atari happenings)-DTP,Image manipulation etc from Dave Barkin
-stuff on home business and Atari by editor Robert Boardman
-help columns
-letters from readers
-reviews
-hardware
-and more
pages? I can't remember, about 20-30??
as to UK users. I can only answer that by saying that I've subscribed to STUser, STFormat, AtariWorld and now STApplications(though I've yet to get my first e-mail copy) and I subscribed because they had articles about Atari, and as long as I can read them I don't care what country they're from!!! :^)
go for it!
what have you got to lose??
(other than a pound for shipping)

: Having brought an Atari 1040 ST here from England, I now want to use it!
: Here are my choices:

: 1) Run it on the dryer 220 socket
: 2) Buy a solid step-up transformet
: 3) Convert the power supplies on the computer, megadrive and monitor
: to 110.

: I would like to attempt #3, but am wondering if anyone has any advice.

: thanks

: jim Wiggins

Well, only for the record I bought a Falcon from US (I'm in Croatia),
so I use a step down transformer. It works fine cause the power consumption
is pretty low. It's pretty hard to move your computer around though. I thought
we could switch the supplies (they are the same generally), but then you're
a little bit fare for. Good luck anyway.

From: fl@io.org
Message-ID: <52cj81$6lb@news1.io.org>
Source record: 137029

John Norton (jnorton@nilenet.com) wrote:
: Can someone tell how to kill postings by certain people so that I never,
: ever see them again? I use the tin Usenet reader. Thanks.

I'm assumning that you are using a shell account and using tin on the online server's machine, right?

Do the following when viewing an offending posting (actually go in and read it), hit Control - k, which will bring up a Kill dialogue where you will be asked whether you wish to kill the sender (address in the From: field) or the thread subject, or both, and whether you wish to do so for this particular newsgroup or for all news groups. You toggle the choices by hitting the space bar.

Once you are through you will be asked to save your selection - do so and you will be returned to the list of posts for the newsgroup you happend to be reading -- only now minus the sinclap factor (or whatever).

Kill, Kill, Kill!

>someone else could modify it to be a slidshow program! Its that easy
>(maybe...)! :-)

Yep, Doug wrote PhotoChrome.
If like me you had registered PhotoChrome you would get the sources,
including a STOS .bas file.
Doug will be at the Atari show in Birmingham this weekend showing off
the new Apex Alpha, the program formerly known as Apex 3, you or I
could ask him then.
You don't need to modify anything to get a slideshow there already is
one, pcsview.prg, in the PChrome archive. Just stick it and all your
pics; pcs, degas or tiny (ICE packed even); in the Autofolder of a
floppy and away you go.

Rich.

Further to my own post...

Using a Kill file as outlined in my previous post will only work ONCE YOU HAVE ENTERED THE NEWSGROUP. This means that if you use an offline mail reader like KIVI or Rejoinder, you will receive all the offending posts unless you first go into each newsgroup you subscribe to while online, and THEN downlowding the QWK package.

Hi,
I've tried this msg in various places with no luck. I'm hoping someone can help me, I'd be very grateful
I am using an Atari ST running Cubase 1.5 at the moment as I've just put myself into debt for the next year or so by buying lots of synths, modules samplers etc, and can't afford to spend any more money to buy a decent computer and latest version of CB. I have a dongle for V1.5 and am wondering if this will work with any later versions (2.x?). I've tried it with 3.o with no joy. Can anyone help me by mailing me 2.x? Thanks in advance-

James Hurley

Most likely, the program file has become corrupted. Can you check for disk
errors on the partition you run Calamus from? It's likely to be related to
that.

FROM: SSweet@mettav.demon.co.uk
SUBJ: GTP

This subject of the GTP's is quite easy to solve.

Firstly, rename the .GTP to .APP, single click to hi-light the prog, go to Install Application, click on the TTP box. Confirm and quit Applicat.

Now when this prog is run in future it will give you a command line.

Regards from STEve & his nice warm cosey PAK'd MegaSTE.

5620. Re: Line noise MegaSTE to mixer

Newsgroup: comp.sys.atari.st
Date: 1996-09-26 00:00:00 UTC
From: jnorton@nilenet.com
Message-ID: <52d0ij$8nu@thoth.nilenet.com>
Source record: 137046

Steve Sweet (SSweet@mettav.demon.co.uk) wrote:
: And just what did you find??.

As recommended, I disconnected the cable (television) from the VCR. The VCR stereo out is hooked to the receiver/amplifier. The line noise instantly stopped. The sound is now clear as a bell. I am told that it proves there was a "ground loop (?)" problem. I now need to buy an isolation transformer to put on the cable so I can hook it back up.

The last i heard was that the Amiga design was bought by Toshiba who wanted
to use the Amiga system as an MPEG decoder for high definition TV.

: You may be able to copy all the files onto 2 1.44 disks, but you will still need
: to boot from the original Disk 1 - that's the problem with copy protection. And
: one of the reasons I don't play games much.

What a great point! I stopped playing games (and buying them) for the Atari ST largely because the copy protection schemes were so inconvenient that it detracted from gameplay.

Games like Grand Prix, Robocop 3, Epic, and many more left me swapping disks and flipping through manuals so much that I didn't enjoy playing the games. In-manual copy protection is annoying, in that it is usually unclear which lines are to be counted (titles, subtitles?), what's worse - there is no consistency between different software makers.

Games should have been hard disk installable, requiring a copy-protected key-disk in the floppy drive for anti-piracy purposes. Software publishers are short sighted.

I believe that if games for the ST had been hard disk installable the ST games market would have been much better off.

: please ?!! :))

Paz:

You and yer mate will have to remove the entire case to find 'em.

From the manual, sort of-

1. Take the paper-feed knob off.
2. Two screws are at the behind the print head at the front of the
printer--they hold the upper cover on.
3. Before you take the case off, be sure to pull the control panel wires
out.

The two banks of DIPs do this:

off on
1 pica condensed
2 128-159 are ctrl codes 128-159 are graphic symbols
3 buzzer on buzzer off
4 form=11" form=12"
5 paper-end detect no paper-end detect
6-8 see below: (#=on)

678 USA
67 FRANCE
6 8 GERMANY
6 ENGLAND
78 DENMARK I
7 SWEDEN
8 ITALY
SPAIN

1 No line thru 0 line thru 0
2 SLCT IN signal not internally fixed

Concerning HDDRIVER there are no limitations I know of. HDDRIVER comes with a
CPX that allows to set the ZIP specific read/write protection settings that
are based on a password mechanism.

What is this SMD-100 MPG-playing hardware? Is it for the ST/Falcon or only the
Amiga?

BTW. What is HiSofts policy to Lattice C? Will it be any upgrades?

Well, I can't see why MagiC can't through up the command line box in the
first place without the need of renaming and mocking around with anything.

Is it that hard??

Only the real small minor differences between the TOS's, but I was
getting at the Falcon that's a 'very' different beastie as far as the
inside goes.

I don't think NT was meant to run DOS programs, since they were also made
for other platforms like the Alpha server.

But with the major differences between the Intels and other computer
platforms, it's still amazing that Atari owners insist on ALL machine
compatiblity whever it's the 8-bit or ST range. We talked about this at
my user group meeting.

I'm looking for an Atari User named Sloopy Malibu. He's been an Atarian
for a Long time. He even used to write articles for Atari Magazines. I
Remember one in AIM Magazine. I have some unfinished Business with Him.
We were in the middle of a Trade and after I received my part of the
Trade, I lost touch with him. And I still need to complete the Trade.
If anyone can help... An E-Mail Address, a Phone Number. Direct any and
all Replies through E-Mail to: bensmith@teleport.com

==Thanx==
===Ben===

For those of you who follow such things:

A formal propoasl to establish (or reestablish) comp.binaries.atari has been submitted to the appropriate net.gods - it has been over 3 weeks since submission, in fact, but the RFD has not yet appeared in news.groups nor in news.announce.newgroups (the "official" venues for such discussions).

It is suspected, based on comments made in those groups, that there is deliberate foot-dragging going on vis-a-vis any RFD to establish any binaries newsgroup.

Anyone interested in participating in the newsgroup creation process is invited to subscribe to news.groups (but I'd suggest you have your killfile ready - there are any number of totally irrelevant postings in there most of the time).

>lzh, and they all work just as well, why not use the ones that are standard.

The term "standard" depends on the platform. If a package is intended primarily
for Un*x/linux/MiNT w/miniXfs, then tar and gzip are the standard (and a real
PITA for the first-time user, too). If the package is intended for an 8.3
file system such as TOS or Messy-DOS, then ZIP is the standard.

Thus, I suugest packaging archives appropriate to the target filesystem - if you
want people using miniX to be the ones who use your package, use tar and gzip;
if the package is for "msot people" (e.g., bog-standard TOS), use ZIP.

See my Web Page at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. For the last couple of weeks BSC has received a Half Dozen deliveries of Atari Stock. And in BSC's Catalogs, you may find something you've been looking. At BSC's Web Page you'll View, & DownLoad Catalogs or Contact BSC by Web Page! Or Request Catalogs by E-Mail. Have problems connecting with BSC's web page? Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. I'll get back to you after the weekend. Catalogs are sent only by E-Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com.

I'm taking a few extra days off from the InterNet to catch up on the Backlog of Testing, Catalouging and Pricing the New Inventory that's been delivered in the last few weeks. With my problem with depression. Getting behind while watching work stack up and running out of room in my work area. This should be fixed once the new inventory after being tested, catalouged and priced is then put in Inventory Storage. Then I'll have Room to work. I should be back on the InterNet on Thursday, Oct. 3rd. Otherwise I might see a therapist for InterNet addiction.

From: greg_evans@delphi.com
Message-ID: <JXAz8Ln.greg_evans@delphi.com>
Source record: 136874

Installing a 486 upgrade board on the Falcon Speed would be tricky at best but it might work. Compo always said it wouldn't but they had been planning a 486 board themselves so that might have been sales talk. The trick would be to find a way to remove the surface mounted 286 and install a 286 socket. Then you could install the 486.

>with news still running so I guess it's just data that hasn't be
>recorded in the FAT/Directory properly and is just a bit of data stuck
>on the drive.

I never had a single lost cluster on my J: partition where Oasis 1.35
and NOS are located... had some other problems, like 'inconsistant file
size' in the message base, etc... But never a lost cluster in now more
than one year of daily use. Just a minute ago I tried Atari's CHKDSK3 to
be sure. Perhaps you talk from Oasis 2?

To the original poster: sometimes Diamond Edge can see lost clusters
where there are not... Especially if you have a folder with more than 1024
files in it. DE then decides it's not good, reports 13763 lost clusters,
and wipes out all files in the folder... if you are in 'auto repair' mode.
Dangerous, no? :-(

DE can also cut the end of a file, claiming it has 'bad FAT entries'
if the file lies on the 2 last clusters of a disk/partition. The file is
then definitely lost... when simply copying it anywhere else with Kobold
would save it's life.

I have an Atari Stacey I'm selling for Salvage. It is one of the first ones that came off the Assembly Line, without batteries. It's Switching Power Supply has been tested and works fine. The Stacey Switching Power Supply can Run in the U.S. or Europe on 110 or 220 Volt. These Power Supplies Regularly sell for $100 U.S. The Stacey without the Power Supply goes for $175 U.S. Dollars. Stacey with Power Supply goes for $250 U.S. The Power Supply won't be available for sale until after the Stacey is sold, with or without it. It's a 4 MB Stacey with Hard Drive. Please direct all Replies Through E-Mail to: bensmith@teleport.com or call Ben at (503)256-9974.

5658. BIG CAB FIX

Newsgroup: comp.sys.atari.st
Date: 1996-09-27 00:00:00 UTC
From: Charles Silver <csilver@kendaco.telebyte.com>
Message-ID: <199609280650.XAA05625@kendaco.telebyte.com>
Source record: 136884

Hello Atarians,

How would you like to connect to almost all http's, ftp's, etc.
within CAB with out bombs, crashes or the dreaded Runtime 163
Error? Well, now you can! How? By using the ANONYMIZER! This
FREE service allows you to just type in the URL that you want
and click. They get about 400,000 hits a day, so somebody is having
fun. Here's examples how:

http://www.anonymizer.com (Web Page)
http://www.anonymizer.com/open.html (To just type in any URL)
http://www.anonymizer.com:8080/ftp://ftp.cnam.fr/pub/Atari (direct)

If there are Web pages or ftp sites you are having trouble
connecting to just try the ANONYMIZER. You'll thank me later :))

"Who is that Masked Man?" it ain't the LONE RANGER! Hi Ho Silver.

If you have trouble connecting to ANONYMIZER here's my TCP Stuff:

TTL = 64
PING_TTL = 255
MTU = 1152 (Servers use 576 octets, so just double it)
MSS = 1112
PKT-SIZE = 1152
DFB-SIZE = 6000
RCV-WND = 5840

Until we get the new CAB/STIK this the best I have :)

Charles

It would be much easier if there were any docs about how to install
Mintnet and get the connection working. I've tried but I gave up.
By the way, it's making me very pleased to hear you speaking about the
Atari range computers. It seems that we have the same atitude about which
is the most userfriendly and best computer around.

I would like to speak to you more about computers so please drop me
a message at estis.xx@mailbox.swipnet.se or my netmail 2:200/136.68

>
> Which software for F030 is (in your opinion) the best for:
>
> -DTP
If you are not into professional DTP then you should go for Papyrus, which
is the best document processor for Atari.
> -comms/modem/FAX
Don't use Connect, cause the author is a PC user. Instead yuo should use
STarcall because it is still in progress.
> -music
If yoy want to work as a professional musician you should use Cubase.
If you're into trackers you should use Graumf tracker because it is the best
tracker for the Falcon and it is still in progress.
> -multitasking
If you are using a Falcon, you should go for MagiC 5, because it's the
best multitasking OS around. Don't listen to the Mint fanatics, because
Mint is a bit outdated.
> -everything else which comes to mind ...(or simply include your Top 10
> list).
>
I saw a posting that said that you should use Mintnet for Internet.
If you can get a SLIP account you should use STiK and the coprogs.
I myself tried to use Mintnet to access Internet and it was like the worst
nightmare I've ever had.
This weekend the new WWW packet will be released and hopefully the Newsreader
will be included in the packet.
If you can get a PPP account you should wait until Oasis 2.06 is
ready. They are working on a Webbrowser and it should be much more faster than
CAB.
There is also a new Webbrowser developed in France that is told to be
fully Netscape compatible.
I will get you my own top ten listing.

1. DTP,Wordprocessing Papyrus4, Calamus SL
2. Comms STarcall,STiK,CAB,Antmail,Semper,Jetmail,LED
3. Database Twist 3, Phoenix
4. OS MagiC5
5. Music Graumf Tracker, Cubase Audio, Megatracker Replay
6. HD driver HDdriver 6.0

7. CD driver Exendos 2.4a, CD audio
8. Editor Everest
9. Graphics Shower 1.1, Apex, GEM View
10. Utilities NVDI 4.11, Thing desktop replacer, Freedom fileselector, SToop bootselector

Please contact me if you want to have any tips on your Falcon

estis.xx@mailbox.swipnet.se

Best reguards
Patrik

RT> If it's a hand scanner, and the broken part was the scan
RT> head, you can use most any of the PC hand scanners - I even
RT> have a spare one I could ship you (but it might be cheaper to
RT> buy one locally than to pay for shipping).

Thanks. It is a Wand scanner - 8.5 inches. The broken part was the plastic fold-up paper holder on the Cradle part of the whole Wand package. I've given a dozen phone calls to them, and many letters. I got the _wierdest_ responses & comments from them over the years. In the end, they claimed they had the part ready to go, but were waiting for me to pay them $12 I owe them. $12? What $12? I always bought with my Visa from them, so I don't owe any $12. If that were really an issue, they could have, perhaps, just possibly, bothered to mention it sooner than a year (& 6 phone calls) after the fact. I'm clueless...

But, obviously this is something that burns me, & I should shut up now. Thanks for your offer, obviously it's not quite what I need, & I can use the unit without the part. Paper just feeds a bit crooked at times if I don't watch it.

Also, thank you for all the info you have sent my way, I'm not good at acknowledging each piece of mail, but you have been very helpful to me. Thanks.

TL> Before you critize someone for write a program that runs on
TL> the machine that he has!

Well, I didn't mean to critize anyone, but I must have from the response I got! :) Sure didn't mean for things to go in that direction.

TL> Try writing one for a machine that you don't have! Part of the
TL> debugging process is to run it and see what fails!

I assumed that a programming language would be up to the task of allowing the software to run on any TOS platform. I assumed de-bugging on a different machine would be a few adjustments for hardware differences, etc. And, the occational total complete, pull-your-hair-out, it-just-don't-work, problem. :)

I'd say the problem is with STOS, but then I'd probably get a whole lot of other folks mad at me, so I _won't_ say that, I'll just shut up about this topic, & hopefully move on. :)

>> Why do you wish to exclude all the '030 users from your
>> software?

>> How would it
>> look if someone reviewed IBM software, saying it was just
>> great, but only worked on '286 machines these days? :)

"M> Oh that's dumb to say, mainly all 286 programs will work on
"M> Pentiums with no problem. The thing is that the Falcon has
"M> different "hardware" that's missing from the ST. So while a
"M> 286 game will not bother even to look for stuff like SB and
"M> all that, the ST game without any modification will look for
"M> something on the Falcon that simply isn't there at all. So it
"M> crashes...

My brother in law went from a '286 to a '486. He tossed most of his
pd/shareware software, because it didn't work on the newer machine.
I never owned a clone, so I can't say for sure. Sorry if I'm wrong,
all I knew was what my BiL told me.

"M> First of all, anyone who has a Falcon should know that to run
"M> a STOS game you have to set your processor speed to 8Hz and
"M> use STOSfix 3 on it. Do you not have to use Backwards to play
"M> commercial games? :)

I've heard of Backwards, but never used it. I do mostly DTP hobby
stuff. Heck, I'm not sure how to slow my Falcon to 8Hz (is it in the
CPX like my MSTE was) - I've never wanted to slow it down! :)

"M> Does a programmer have to buy every single model of a computer
"M> platform? Here's how I see it...TOS and GEM programs have
"M> 'guidelines' to follow to work on every single model as well
"M> as Geneva, Magic, and all the emulators. The Atari Compendium
"M> can do this. And as for STOS games, a different breed, here's
"M> what I would do if I were writting one.

About all I use are GEM programs. So, the solution seemed simple to
me! :) I guess I would expect STOS to be upgraded to handle all the
different TOS versions. Can't one, for example, program Pentium code
on a '386? As long as it follows the rules... I guess I feel it's a
shortcoming of STOS (whatever that is - I assume it's a programming
language - never caught on around me in the USA that I know of...)
to not allow folks to program & structure their programs to work
with all TOS versions.

"M> Only on the Atari platform do the users 'insist' that it works
"M> for ALL models, in fact people are still using 520 ST's with

"M> TOS 1.0 for crying out loud! We take this for granted while
"M> on the PC platform, nobody even writes for the 486 anymore.
"M> Because of this, ST programmers have to 'try' to write to all
"M> platforms with the 520 ST as the lowest common denominator.
"M> AND you have to try to make it run on the higher-end machines
"M> like the Falcon, plus if it's GEM then it must work with a
"M> multitasking system.

Yes, that is a problem. There is so much different hardware
available on the different TOS machines. I guess I assumed that STOS
had kept up with all the changes, and it was only a matter of
writing clean code that followed the rules.

"M> In short, if I write a program I'll try to make it run on all
"M> models as possible as well as make use of the enhancements of
"M> the STe. Because YOU asked for it.... :)

Sorry. Didn't mean to piss anyone off.

Actually, don't waste your time on the STe for me. However, I do
have a MSTe.... (Yea, my bad sense of humor gets me in trouble...:)

AJ> TT settings with GenFixer is that knowone answered my requests
AJ> for help getting TT settings! So there cannot be any TT gamers
AJ> out there interested in playing STOS games...

Anthony, you said that once before here (at least :), so that is why I assumed the guy wanted to write programs only for ST machines. He seemed kinda 'proud' that his programs only run on an ST... I guess I mis-understood him somewhere in there. He said something about 'programs written on an ST, for ST users' and the way he worded it, I assumed he is _trying_ to leave out Falcon owners.

Since I remember you posting this information once before, I assumed anyone not fixing the STOS software for TOS 4.x was doing so intentionally.

(Tony - this is why I was very confused by your message - I had just read that there was a generic fixer for TOS versions including 4.x, and you kept saying that you were writing programs just for ST folks. It sounded like you _wanted_ to exclude Falcon owners. We got crossed up somewhere there. Sorry.)

Really? Mint does all that? I've had ST and better Atari computers since '87, and all I know is Mint is buggy, bad, and not worth much. That's what 'everyone' told me. Never bothered to try it. Thought it died when Atari Corp. went to the Jaguar. So, I'm certainly in the 98% you mention! :)

It's a little confusing - Mint, Mintnet, Linix, AES-something, Lynx and what-not. I've no idea if any of these even belong together. But, I'm just a simple dirt farmer, so I guess it's not surprising... :) :)

TG> the game :)

Well, I live over here in the middle of the USA, in a rural area. I have to go 30 miles to find a couple of computer stores of _any_ platform. I'm not on the Internet - I pick this group up from a long-distance phone call to a BBS, and internet E-mail was just dropped on the BBS. There is only one local BBS in my town, and it is not netted to anything. The nearest store that used to sell Atari equipment is over 100 miles away.

So, I'd love to see Heartland (I used to love computer games - don't play many of them any more, but I just got out my old 800XL & ended up playing Championship Lode Runner into the wee hours...) but I really don't know how I could get a copy. Will it make it onto any of the CD-ROMs? I pick up quite a few of those - otherwise, it's really tough for me to get software...

I have heard it said that the power supply in a 1040 has a higher rating
than that in a 520, but in use it makes minimal difference.

5673. "File read only" = locked in UNIX as well?

Newsgroup: comp.sys.atari.st
Date: 1996-09-27 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <324b07c211fda0@sn.no>
Source record: 136925

Something strange happened this other day...
I had made a script for my UNIX setup, but it didn't work properly, so I fixed it on my ST and uploaded it again, but for some strange reason it didn't work! I couldn't make it execute, even when I had done a "chmod u+x".
I suddenly remembered that I had locked that file on my ST ("file read only" on the desktop), so I set this to "file read/write" and uploaded it again, did the chmod thing and it worked!
So the conclusion must be that files will be preserved locked some way even when transferred to a different system!

The strange thing is that doing "chmod" wouldn't change it's status (even though the UNIX system reported it as having been changed).
Has anyone else encountered this problem, and what can you do about it if you don't want to log off, unlock the file on the ST and upload it again?

Ok..!
I've read it here a few times and on the local BBs's........
Where you can substitute an old MAC monitor cable for an Atari Hard Drive
DMA Cable!

The MAC dealers/service Techs think I'm CraZy!!

They have never heard of a 19pin Monitor cable!

If you know what kinda cable it is!! (real name)
If you know what monitor it was used on?
What Mac sys it was used with!!

Lemme know!

The Local Atari dealer... want's $40.00 to make me a new one!
For a DMA Cable!!!! Uh...Uh! Ain't gonna happen!
I should have bought that box of cords that guys was selling on here a
while back!!! 2 DMA cables.. about 25 Joysticks.. power supply
..etc..etc for a whole $20.00!

Damn... i hate it when I let a good deal get away!!

Better yet would be a 3-5 foot male to female DMA cable.. then I could
connect it to the other end of my existing Female to female DMA Cable!!
Sheesh!!!

What's a guy to do?
SeeYa

[sigh] You'll get them every time. Why they do it, is beyond me, when many
of these cancels have no rhyme or reason, just random. I recognized a part
of the Path header as coming from a bot called Dave The Resurrector, run
by Chris Lewis in the news.admin.net-abuse.misc newsgroup. He's not the
canceller, rather, he and his bot is the one that reposted those that were
cancelled. Who the canceller was, I don't know. You'll have to ask him.

The problem is not only of hardware but also of an OS thing.

-- OK I am not looking for flames but I have to say this --
and this is my experience using them, others may experience
differently.

I am also using NT on a Pentium, most of the DOS stuff do not run in the
command shell (eg ZOO extractor) but once I reboot back to DOS/WFW
they all works. Same hardware different OS.

And that thingy about some hardware not even searched for is correct.

Thank you for understanding.

Just for infor, when I was writting software for the ST, I had to have
not only Falcon & TT tester, but also ppl who are on TOS 1.0/1.4. The
cycle time was usually over a weekend, I don't blame them (the testers)
for the delay as they are providing me a FOC service which they don't
need to do. And when they are busy, I don't rush them for results, I don't
have the rights to do so. But now I own a Falcon as well, so it helps in
cycletime.

My Atari proggy are on :

You should looka at integer division to see clockrate.
100% = 16 Mhz
200% = 32 Mhz
225% = 36 Mhz

I run with STRAM, because I don't have any fastRAM. I use an old
accelerator called SpeedResolution from Hard'n Soft.

I have never been able to get STZip to keep long filenames, case sensitivity,
etc. Do you use different zip software?

LZH does keep the long filenames, but I have found that it has problems
keeping the access flags properly. For example, what was an executable
when I put it in is sometimes no longer executable when it comes out.
Has anyone else had this problem?

I would suggest that since gzip and tar seem to be more standard than zip or
lzh, and they all work just as well, why not use the ones that are standard.

I would find it a nuisance if I was unable to use long and case sensitive
filenames. I think long case sensitive filenames can only be a good thing,
surely?! Besides, if for some reason you don't like long filenames, just
don't use them, don't bother with a Minix FS. What is everyone complaining
about!

I can never understand why I just got the things and installed them and it
was quite easy, yet this never seems to be the case with anyone else?
Really peculiar! I simply unarchived MiNT, copied MiNT to the auto folder,
unarchived MiNTNet and copied the drivers to the /c/mint folder. What
could be easier? CAB was also easy to install, simply by unarchiving it
and double clicking on the program icon.

Of course if you want a full unix setup, things of course get more complicated.
If all you want is an internet connection, well I can't see what is so difficult
about it.

On the STe you can have 0 as the playback frequency, unfortunatly
that means off on the Falcon (actually seem'd quite reasonable to me?)
so you should start at 1, this means bigger samples, but hey! on the
falcon you have the memory and the space to play with.....

Santa!! Please bwing me a Falcon for Christmas?

From: ad910@lafn.org
Message-ID: <1996Sep27.062759.14077@lafn.org>
Source record: 136939

Recently, I set my neices up with a 1040 ST, Pagestream, and what I believed to be an Epson MX-80.

But I couldn't get it to print out Pagestream documents... it just went crazy.

I figured it had been configured for IBM, so I tried to use the settings in my Epson manual (no documentation came with the "MX-80") to make it act like an Epson again...no luck.

Does anyone know the settings for the DIP switches in this printer? It has two banks of switches; one with the normal eight switches and another with just five switches.

It WILL print document files from the desktop, using the "print" or "show" options that come up when double clicking on a file. It also will print from STWriter Elite, but only using the "pica" and "elite" fonts...no expanded text, bold, italic or etc.

Any Ideas?

Thanks,

Bob

> with just a few little graphics streaks across part of the screen. How well
> does your 16 MHz mode work? I could never get it to go, I think my Falcon at
> the time was sub-standard.

I have the SpeedResolution without the Resolution part (?), so I
use Blow-up hard II instead.

16 MHz - as ordinary falcon
18 MHz - 18 MHz CPU and 18 MHz on the bus
32 MHz - 32 MHz CPU and 16 MHz on the bus
36 MHz - 36 MHz CPU and 18 MHz on the bus

The TURBO-SWITCH on a Tower-model is used for switch between
16 - 32 Mhz and 18 - 36 MHz.
To change from 16 to 18 or 32 to 36 is done by an acc-program.

An advantage of this is that you can run at 16 MHz exactly as an
ordinary falcon to get maximun compability.

Higher bus gives higher resolutions
With Blow-up II (hard) Falcon can manage:
800 x 608 16 color 78 Hz
768 x 608 256 color 67 Hz
600 x 400 True color 63 Hz
In the other graphic modes (not maximum)
768 x 608 2 color 77 Hz
768 x 608 4 color 77 Hz

The limit in true-color is the bus.
(data and graphic share the same bus).

Almost every program works with this acc even in 36 MHz.
(Not all games or demos, but I think it's the blow-up).

I can run in 16 Mhz without any problem!

Heheheee.. I guess I got a bit carried away there. :-)
The point I was trying to make is that it should be possible to make STOS
games run under any OS including MagiC.

> I would love to get MagiC someday, but I'm still keeping my STe for games.

What does MagiC has to do with keeping your STe?

> BTW, still waiting for the STe version of Bad Mood. :)

Well, you could say that there is one, atlease DVIEW has been compiled
to run on a regular ST. Bad Mood is based on DVIEW.

BTW. There might be a version for the ST as well, but I doubt that it will
be usefull. Maybe if you have a PAK030 installed.

: suggestions? Am I just out of luck?

: Mike Freeman
: daymon@psnw.com

I have TOS 4.92 boot off the hard drive, which then closes off access as far as booting from hard disk. Then, I have a boot disk in Drive A with HDDriver and AUTOX (replace the X with the drive you want it to boot from) in A:\AUTO\. This causes the system to recognize the hard drive, and boot from it. (Of course, I could use HDDriver to boot from Drive C without using AUTOX, but I had this configured this way since I got TOS 4.92 in 1994, so I never changed it except to upgrade HDDriver.PRG) This works great, and involves a minimum of time spent. Does this *finally* help anyone?

Leslie

: This is exactly the problem. It needs to search in the floppy to get
: the hard disk driver. The proble is that the author doesn't know how
: and why the TOS4.92 doesn't want to read the c boot sector when
: tos4.04 does it. So it is not loadable from the hard drive completely
: because you still need to have a floppy that contains the hard disk
: driver. Apparently Craig knows how to do it, and says that everyone
: knows, actually not me, the author and you don't know howto do it
: fully loadable from the harddrive without having to insert a disk
: with the driver. So just ask to craig I am sure he'll help you out.
: hehehehh I love it. :)

First, I wish to state that this thread is intended to help Falcon owners come to grips with getting TOS 4.92 to run. There is no need to create bad feelings, and although I am not a netcop, I would rather spend my time reading positive messages (e.g. messages that help people, not cut them down - this applies to *everyone* who has been engaging in this. haven't we better things to do?) Secondly, as I have succeeded in getting TOS 4.92 to boot from drive C:, I know it can be done. So what if you need to have a hard disk booting bootsector on drive A: or an auto folder containing the hard disk driver of your choice with AUTOX (or with a different one (or for that matter, using HDDriver and set it to boot from Drive C internally. Whatever. Stop fighting please.

Leslie

g'day i will try to anser your question if i can
your friend needs a program called stword the and easyest to use

#2 the atari st uses a os called tos (st operating system)
is all on eprom in side the computer

they are a griat machine
i have a mega st2 with hard disk

but i am using this 486dx4 100 on the net

any way you got this or if it was of help email me
dentch@netconnect.com.au

dennis is the name

h> I research the adress of the parallele port for the 520 ste.
h> Please, if you know this adress send me in France.

Hmm ... the MFP is mapped from FFFA00 to FFFA2E. Do you REALLY want to fiddle with the hardware interface? You can do most things using the low level operating system calls.

From: rmgreen@PROBLEM_WITH_YOUR_MAIL_GATEWAY_FILE
Message-ID: <52gq91$897@server2.netrics.com>
Source record: 136948

Good Morning!

It began as a 520STfm, but then the internal drive was upgraded from a single-sided one to a double-sided one, and the TOS chips - well, the case was already open, so why *not* stick in TOS 1.4?

Apart from the fact that you'd have to stick in an extra 0.5M of RAM to get it to 1040 status, it's already there. Contrary to some earlier (and not altogether accurate) mutterings about the 520, both the power supply and disc drive are *indeed* internal, so what I'm selling is a neat little machine. Even if you'll never run it, it's still great for parts. Also comes with an Atari mouse.

Yours for $55.00 (U.S.) plus shipping. Also ask about prices on half a dozen or so classic (mid-late 1980s) ST games, also available.

Talk to you later!

>jacquesa@cs.man.ac.uk (Anthony Jacques) writes:
>
>> Ie - ALL non-Magic (or patched) ST's, and also all Falcons...
>
>So why not MagiC as well??

Because they need a different set of values to work, and the routine that Jawx (the programmers of STOS) used to decide which OS version looks at the TOS version - which doesn't change with Magic installed (or didn't with Magic 2, which someone tried)

Fixing with STOS Fix 3 is ok though, as this doesn't need to detect the version, as it sets it to whatever you have...

>And games can be made to run under MagiC without any problems. Just look
>at Bad Mood for the Falcon. It runns perfect under MagiC launched from
>any resolution with anything you want installed.

Hmm... Strange enough, I know about Bad Mood. :-)

GEM-DEU almost works with Magic too. :-))

>It's the best example of compatible game I can think of and it's the best
>one too. Okey it's not ready, but who cares. It's damn beutifull to look at.
>;-)

Yep, looks nice, and compat. settings for different speed falcons... but it isn't at all compatible with the ST, which is what STOS programs are doing - making themselves compatible with ALL versions...

>Anyway, it runs under TOS, MagiC 4/5, MultiTOS and on the FX-card taking use
>of FX-RAM, 32/40 MHz accelerators, Speed Resolution Card, Afterbruner040 using
>FAST-RAM 32/40MHz. You name it, Bad Mood handles it. :-)
>
>It might even take use of the Nova card in the future.

Who mentioned that? I dont remember that... Or is that via Anders' resolution packets?

>> Magic, yes - STOS won't work with this. (AFAIK - I dont have Magic though)
>
>So go and get a copy of MagiC then! You wont regret it. :-)

Hehehe... yea, maybe. If there is an offer on at the Brum show, I might be talked into it...

Then I could debug the texture-browsers. :)

Because it is only stable if you can get it installed. I'm suprised that there
wasn't any kind of announcement that it was up to v1.00 as this must mean that
it is in a fairly complete state... (and it was already light-years ahead of
Stik from what I have seen)

>We have got this very powerful network stuff in MiNT-net that can do anything you

5707. games that run off hd (was Re: grandprix 1 for atari st)

Newsgroup: comp.sys.atari.st
Date: 1996-09-27 00:00:00 UTC
From: fabrice.gamberini@art.alcatel.fr
Message-ID: <9609271204.AA04274@rtbdat150n.CAO>
Source record: 136959

well,

some games work off_HD without any problems,
notably esprit and oxyd (+magnum),
which are among my faves; plus i almost never
plug a color monitor on my megaST.

off course you have to deal with "manual page code" protection
schemes -for oxyd at least- but i don't really mind, if thats
the price to have them on my hd.

i think tons of small pd/share also work from hd --

my only regret is not to have dungeon master and chaos .
that would have been nice, really.

bye.

Hi,

I need very very QUICK help for an Ethernet card called RIBEL C90.
=====
There is on it Jumpers :

J1 to J6 next to the BNC connector
J11 alone
J8 to J10 next to the VME port
J17 to J23 next to the memory

I want to make it running on TT030 ...

For the moment I have the driver for Ribel + !?
It always said that it don't find the card ...

So have you got a driver for it ?
Could you give me more informations about the jumpers because I have
no documentation of it !!

Please reply by Email ... !!

Thanks per advance for your help !!

With Best regards,
Herve

>that most of us are used to (ZIP/LZH/etc) then what we need to have
>and what we need to do to get it onto our hard disks...Thanks! :)

I'm no expert, but I recently download the "TAF" distribution which was
pretty easy to set up (i.e. you don't have to have a Ph.D. in programming
and UNIX to do it!). It contains MiNT, MiNTnet, Tcsh UNIX shell,
X11 ("X-windows") and a graphic web browser that runs under X11 called
"Chimera".
There might be other things in there as well, but since I'm no expert I
wouldn't know what to look for.
I've already got it working, but haven't tried any of the networking stuff
yet, but I was really impressed to see X-windows on my humble 8MHz STe with
4MB RAM!! I've been using X11 before, but that was on UNIX
workstations/terminals.

Anyway, I've disabled X11 as I don't see any practical use for it on an ST-
it's slow, takes up a lot of memory (I even have problems on my 4MB
machine) and Chimera isn't of much use with this low memory. I've heard
that it often crashes because it runs out of memory. Besides it looks a bit
dated (reminds me of XMosaic when it first came out). I'm going to try
using CAB instead, when I get PPP set up properly with MiNTnet- other
people have been using this and it works very well.

I downloaded TAF from Cnam in France:

ftp://ftp.cnam.fr/pub/Atari/Mint/Chimera/

(the directory is called "Chimera", but contains the whole distribution as
mentioned above).
I believe the whole setup took about 3 Mbytes, but is split up in several
files so they can fit either DD or HD disks. You can ofcourse use a
harddisk to install it, but you need to edit the file-paths in the setup
file for this.

You can choose to download one complete file with everything in it, or
several separate files. I chose the latter since it would be a shame to
have downloaded almost the whole thing and suddenly loose the
modem-connection or something... :-(

The setup program files are ZIP compressed, but the rest of the files are
.tgz compressed (I seem to remember). But don't worry- you don't have to
eneter any .ttp commands or anything- the setup procedure takes care of

everything. Just be sure to follow the readme file very carefully step by step.
And to be on the safe side- take a backup of you harddisk in case you should type the wrong install partition or something (it erases the partition which it installs itself on). And another important thing I found out: don't put the Mint files you've downloaded and the install program on the partition which you're going to install it on! It'll all be erased, and you then won't be able to install it! (luckily I had backed them all up). You need to put the install program and all the mint files on a separate partition and install it from there.

There's also another distribution which people have told me is better or bigger or something... but it's mainly in German (I believe). It's called KGMD.

Links to several sites containing KGMD and TAF etc. can be found on my web page- Atari section (URL below).
Hope this information helped a bit.

Easy fix.
Use Teradesk. It's a desktop replacement. It does all that you want and
heaps more.
It's totally free and I think it's great.
Try usual ftp sites. Version 1.39 is the latest, I think. TERA139.ZIP or
some similar file name.

Regards, Julian.

: from a Sysop's point of view it gives me more options than i will
: ever need......I'm glad i went to ratsoft!

And so what if it's a bit more complicated for the users? I see no reason why to adapt my bbs to 5-6 years old level. We can't think our users are incompetent for all future, and RatSoft maybe is more complicated, but it's sure as hell much more powerfull when you know how to use it. I rather show my users some stuff which can help them to work more efficient than to use a more simple system.

Nah, we RatSoft sysops know that we have choosen the best, and we don't regret it, not for a second...

To all I met at the show, Hi, Nice to finally see you to put a face to
the voices I've heard on the phone!
Well done Mike at Goodmans for organising it, was a well attended
event with some good stuff on sale. If you missed it, get to London
for 29-09-96 for the next one.

L.A.P.D. Voted PD Library of 1995 by the readers of ST Format.

AtariPhile #3, the online [HTML] magazine of the FFF, is now available, along with AP#1 and AP#2 from our new ftp site...

ftp.netkonect.co.uk/pub/atari/atariphile/

Or point your browser at...

http://www.walusoft.co.uk/fff/

You may also be interested in the recent changes in the Falcon FacTT File. Here is our latest press release...

Falcon FacTT File ~ Press Release ~ September 1996

The three FFFellows!

The Falcon FacTT File has been run for three years by Kev Beardsworth and Colin Fisher-McAllum as a hobby. The membership listing, 42BBS and our new magazine, AtariPhile, is proving to be a too heavy task for us to bare. Therefore, we are pleased to announce that Domhnall Dods, a long standing contributor and FFF member, has joined us a co-organiser.

Also, following consultation with many of our active members, we have decided to drop the membership listing and therefore end our user group status. This way we can concentrate on AtariPhile and 42BBS. We will not change our name, the FFF will act like a publishing house.

There are a growing number of very active Atari user groups around the UK, that hold regular meetings and produce newsletters. We suggest you contact Harry Sideras of the UK Association of Atari User Groups for information on your nearest group. Send a DD disk and SAE to: UKAAUG, 49 Haywood Rd, Tile Cross, Birmingham B33 OLJ. EMail: sidcelery@cix.compulink.co.uk We will continue to publish AtariPhile and run 42BBS for some time to come and offer our wholehearted encouragement to all Atari support organisations.

May the FFForce be with you!

Regards

Colin, Kev & Domhnall

Blow UP FX comes with Blow UP Hard I. I understand II has the variable clock feature. What is the best Vertical scan rate you can get in 1024X768? I seem to be getting just under 60 Hz, even at 36 MHz. Very flickery and annoying.

I have no idea how close they are to you, but System Solutions can provide you with the RAM upgrade card and SIMMs at a reasonable price. You shouldn't need any tech work done. The XTRA RAM Deluxe is a simple fit, involving the piggybacking of the MMU chip (in its socket), the replacement of the video shifter with a circuit board (and fitting of the shifter back into the circuit board), and the cutting and jumpering of two resistors.

BTW, they fit them, too.

Dan

Do you own a Falcon 030?
Do you own MagiC,Geneva or MultiTOS?
Want a screensaver that plays an MPEG movie and .MOD file of
your choice AT THE SAME TIME?

Then you need....

%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%
% Multi-Saver The Multimedia Atari Falcon Screensaver! %
%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%

Version 1.00 is FREEWARE and has the following features...

* Works under MagiC,Geneva or MultiTOS
* Supports MPEG video playback
* Plays standard 4 channel .MOD files
* Supports Random Selection from a list .MPG and .MOD files
* Works eith ExtenDOS.PRO so you can play .MPG's and .MOD's from CD!
* This version is FREE!!

Available from...

* ftp.sunsite.cnam.fr (pub/atari/incoming filename M_SAVER.ZIP)
* In the comp.sys.atari.binaries newsgroup
* By UUEncoded e-mail from: firebird@wildnet.co.uk (length 234K)
* By UUEncoded e-mail from: allfree@cruzio.com

Remember,version 1.00 is FREE so what have you got to lose?!!

****

PS Posted, on behalf of the authors, by me. Please ensure you direct any
related mail to the above addresses and not mine ! Thanks :)))
Paz.

I purchased the base machine used to do a data conversion job + upgraded
it.

Job done, I would like to sell it as a package:

520stfm
4mb RAM (Systems Solutions u/g)
VGA hi-res adaptor (Systems Solutions part) - this works just fine on the
three VGA / SVGA monitors that I have used
it with.
Atari 30mb external hard disk (Systems Solutions recon)
Colour monitor - SCART
mouse (of course)
2nd FDD (Cumana)
2 joysticks
some boxed software, loadsa disks, manuals, books, boxes.
All leads, bits&bobs

All in good order.

Please reply email, or phone:
(01985) 217547 - home
(01249) 810210 - work

Source record: 136825

Taking 5 minutes to read what follows can change your life :

"I read an article, someone had kindly posted on an Internet newsgroup, describing how to send A ONE DOLLAR BILL TO ONLY FIVE PEOPLE AND MAKE $50,000 IN CASH WITHIN ABOUT 4 WEEKS!!"

OK. Here's my try. I just sent $5 to five different people around the world.

Why should I do it? Here's what I think :

I don't typically trust "get rich schemes". We've all seen them on late night television -and we've all tuned them out. The difference with this was it was only $5.00 --the cost of a lunch, and a quick turnover.

What if nobody responds? Well, I am responding already -- other people did too. And, even if the amount returned is not as great as folks tell us -- even if it's only $2000, $1000, or even $500 -- I would just put in $5 on the possibilities. And, think, what if it IS true and $50,000 comes in about four weeks.

OK, so maybe $50,000 in cash is a tough amount to reach, but it doesn't keep me from trying.

Well, I don't know about you folks, but I will do it, so plenty of other people must be doing it too. I think they are helping themselves and others.

The remainder of this article is a message from someone else who knows better how it works.

I read an article, someone had kindly posted on an Internet newsgroup, describing how to send A ONE DOLLAR BILL TO ONLY FIVE PEOPLE AND MAKE $50,000 IN CASH WITHIN ABOUT 4 WEEKS!!!

Of course, I thought this was rediculous at first. Then, after a short period, I saw another one in a newsgroup I go to a lot. The more I thought about it, the more I became curious. I thought, "I have already heard of such things -- but on the Internet ?!?!? Maybe this is legitimate!" Besides, what's $5,00 ? I decided that even if I had to throw $5 into the fire, I wouldn't mind it much, and gave it a try. After all, I needed a LOT more than five dollars.

I carefully followed the instructions and then waited to watch the money come in ... prepared maybe to receive about $1000 to $1500 in cash or so ...

Two weeks later, I began receiving money. It was indeed unbelievable! What a welcome surprise when those envelopes kept coming!! I knew what they were as soon as I saw the return addresses from people all over the world -- most from the U.S., but some from Canada, even some from Europe, Japan and Australia! I tell you, THAT WAS EXCITING !!

Soon, hundreds, and then thousands of dollars began to roll in like an avalanche! So -- how much did I get in total ? $1,000 ? $5,000 ? Not even !!! Within 4 weeks, I had received a total of $32,445 ! My bank account changed its "-" into a big "+"(++++)!!! I bought myself a car and things I wanted for a long time for my wife and kids!

There is not any reason why the same shouldn't happen to you. If you're not interested then don't participate.

It seems to work for other folks:

* Mike Walsh -- claims that he recd nearly $47,000
* Markus Valppu -- says he made $57,883 in four weeks
* Dave Manning -- claims $53,664 in same amt of time
* Dan Shepstone -- says it was only $17,000 for him
* Oliver Arcadipane -- claims $32,445 within four weeks

Do I know these folks? No, but when I read how they say they did it, it made sense to me. Enough sense, that I'm taking a similar chance with $5 of my own money. Not a big chance, I admit -- but one with incredible potential, because $5 is all anyone ever risks -- PERIOD. That's all Mike, Markus, Dave, Dan, or Oliver needed, yet their $5 netted them tens of thousands of dollars each.

So, how do you do it, you ask? It's truly simple. Go ahead and get a printout of this information:

STEP 1

Write the following on five separate pieces of paper:

a) a name, address, and e-mail

b) name of the newsgroup where you learned of it

c) the words "PLEASE ADD ME TO YOUR LIST"
(You are not just sending a dollar to someone;
you are paying for a legitimate service.)

d) as a courtesy, also write the position their
name was in: "You were in position 3"

STEP 2

Now, fold each piece of paper around a $1 dollar bill (no checks or money orders), and deliver them on the way to the following five people. Folding the paper around the bill will ensure its arrival to an intended recipient. This step is important.

****
NAMES LIST NAMES LIST NAMES LIST NAMES LIST
****

! ! HONESTY IS WHAT MAKES THIS WORK FOR YOU TOO ! !

1. Nir Levi,
PO BOX 342
Yavne, ISRAEL

2. Landon
#1 Lakeway Drive
Conroe, Tx 77304 USA

3. Olivier Arcadipane
237 rue Francois Andre
7390 Quaregnon BELGIUM

4. BTech
5641 Apgar St
Houston, Texas 77032 USA

5. Hugo Desmeules,
6100 Deacon apt 1-P
Montreal, Quebec, H3S 2V6, CANADA
.....

STEP 3

Now, listen carefully -- here's where you get YOUR MONEY COMING. Look at the list of five people; remove the top name from the list, and move everyone up one position. This way #5 becomes #4 and so on. Put your name, address, postal code, and COUNTRY in the fifth one on the list using a simple text editor.

STEP 4

Now, take this revised article with your name on the list and repost it to as many newsgroups as you can -- try for more than 200 newsgroups. There are at least 17,000 newsgroups, so it shouldn't be hard to find that many. Remember, the more groups you post to, and the bigger the newsgroup is, the more people will see your article and the greater probability they may send you cash!

If you wish to be anonymous, you may use a psuedonym. -- call yourself "The Boss" or something -- whatever,

just be sure the address is correct.

Give a catchy title -- something like "EA$Y MONEY", "FA$T CA$H", "NEED CASH TO PAY OFF DEBTS?". The more posts, the more money you may get -- and, of course, the more money others on the list probably make too. REMEMBER, BE HONEST AND EVERYONE MAY MAKE MONEY FROM THIS EASY CONCEPT. You can reap the benefits, believe me !!

Now, hypothetically, here is why it should work:

- Of every 200 posts I made, I received 5 responses. Yes only 5. You could make $5 for every 200 posts with your name at #5.

- Each person who sends you $1 now makes an additional 200 postings with your name at #4. ie. 1000 postings On average, therefore, 50 people could send you $1 your name at #4. $50

- Your 50 new agents make 200 postings each with your name at #3 -or- 10,000 postings. Average return 500 people = $500. They make 200 postings each with your name at #2 = 100,000 postings = 5,000 return at $1 each = $5,000.

- Finally, 5,000 people make 200 postings with your name at #1 and you could get a return of $50,000 before your name drops off the list. AND THAT'S IF EVERYONE DOWN THE LINE MAKES 200 POSTINGS ! Total in one cycle $55,000

Remember 200 postings is only a guideline. The more you post, the greater the probability of return. Maybe it is possible to get $50,000 in cash -- I don't know, IT LARGELY MAY DEPEND ON THE INDIVIDUAL. You can follow-through and repost this article everywhere you can think of ! The more postings you achieve can affect how rewarding the experience will be. It's just too easy !!!

LET'S ALL TAKE CARE OF EACH OTHER BY JUST BEING HONEST AND BY PUTTING FORTH 150 PERCENT OF EFFORT. Please, don't take away the hope from deserving people, just like you, who did already put in their money the right way.

From time to time when you see your name is not still on the list, if you want, you can take the latest posting you can find and start all over again.

Let's review why you may want to do this. Almost anyone can afford $5 with the possibility of such SPECTACULAR RETURNS.

Some people have said, "What happens if no one sends me any money?" Big Deal -so you lose $5 -but what are the chances of that happening? Are you willing to try on the possibility of such BIG money as 50,000.00 $$$$???? -- all just for the microscopic amount of five separate dollars? Just think of all the new Internet users that join every day !!!

So, that's it. Pretty simple sounding stuff, huh? There are millions of people surfing the net every day, all day, all over the world. You know that -- you've seen the stories in the paper. There are millions of new net surfers every month !!! This is the great plus of the Internet -- people all over the world can hear you and will listen if you talk reasonably. If this wasn't the Internet, and was a smaller circle of people, the possibilities would be different -- if the amount of money had to be bigger, it wouldn't succeed. But here, on the Internet, it is a giant village, where thousands of members join every day! One can hardly lose !!

So pay off your bills and debts. HOLD OFF ON THOSE LOTTERY NUMBERS FOR TODAY -OR- EAT AT HOME TONIGHT INSTEAD OF TAKEOUT FROM McDONALDS (You can make up for it later). Then you can JUST SIT BACK, RELAX AND WAIT FOR THE RESPONSES TO ARRIVE !! The first one or two weeks will be slow, but it will pick up.

REMEMBER -- HONESTY IS THE BEST POSSIBILITY. YOU DO NOT NEED TO CHEAT THIS IDEA TO MAKE MONEY !!

****
ENJOY LIFE! YOU MAY WANT TO GIVE IT A TRY!
****

I travelled to the Atari Show in Birmingham today - And well worth the visit it was.

Top PD Libararies were there including Floppyshop and Goodmans as well as the ST Club, Calamus Users, Upgrade Shop, Atari USers Group, Some very interesting Midi demo's and the new Atari Computing mag.

If you havn't yet subscribed to Atari Computing then you will have to get to the front on the queue in London as they sold out of the Burmingham allocation very quickly indeed - And then you'll have to make do with issue 2 - Another print run is unlikely.

The mag looks like being a massive success - To which we owe a big thank you to the brave individuals that risked time and money to launch it.

Everyone has been pleasently surprised at the turn out - So why not go along to the London venue.
Mark Butler, Atari ST Shareware Programmer.

The answer's easy...Billionare Bill can get any newsgroup he wants on the
Net including one with GIF pictures of his wedding photo. Meanwhile, the
people(those who actually work for a living and buy and use products) are
basicallly told to go stick it, especially on a non-Micro$lop platform which
alone is basis for charge of heresy by the 'mainstream' computer industry.

Wow, you think a $200 ST with $50 modem and CAB can get even lower-class
people access to information on the Internet. But I guess it's reserve
to those at least middle-class who can afford the most recent expensive
setup.

Sorry for the ranting, but I just read an interview of William Gibson who
talked about the same thing. Since he coined the phrase "cyberspace",
then he outta know a few things. :)

Thumbing his nose at Internet ellitism is the computer shock-jock...

You trying to tell me that the Falcon is anything but an ST computer?
Hey, as buffed up as it is...it still happens to run TOS and GEM
programs, once made by Atari, and only needs the fixing programs for games
since it uses different hardware(STe has a few games with the same
problem which went unaddresses.) Would not Gemulator and MagicMac happen
to also run "ST" programs, so they are "ST" emulators at some level.

I guess that the term ST is starting to need redifining since not only do
we have the Falcon, but also emulators, German machines, and Magic. So
do we call the platform ST meaning ST compatible, or TOS in the same way
as DOS computers?

Well I actually used older DOS programs on the higher-end models and from
screwing around with GW-Basic, only a few older programs won't work with
PC compatibles but only they do stuff like go to 40 columns or something.

If you hardly play any games then what would you be worrying about so
much? Proper GEM/TOS programs can work with the extra speed, it's that
certain programs like games for example are timed-dependent to work right.
So for those you are able to go to 8Hz and yes you can use the CPX.

GEM programs have guidlines to follow for broad-based compaiblity, which the Atari Compendium states. STOS is "NOT" a GEM program nor was made to be, but with the STOS fixers then this is already a moot point.

> Can't one, for example, program Pentium code

A.) Go ahead and code for a Pentium on a 386, but even if you manage to get to assemble correctly you won't be able to test it. And if you give it to a user with a Pentium and it doesn't work, then he/she will say the coding is crap and it is the fault of the programmer.

B.) Yes, there were problems at first working on STe's and TOS 2.06. But even a few years ago, STOS basic and programs can by made to work on just about all TOS versions. Is there any part of this you still do not understand, shall I give you the guy's e-mail address so he can explain what he has been doing for the past couple of years?

Only between STFM, STe, and Falcon...there are extensions to deal with the extra hardware. The problem was working with all TOS "versions" and as I have been saying a thousand times over, there are ways to fix it to work on ALL versions.

It's the wording of the whole thing...

> Actually, don't waste your time on the STe for me. However, I do
> have a MSTe.... (Yea, my bad sense of humor gets me in trouble...:)

Oh for crying out loud...your Mega STe IS a STe!!!!

It has a better TOS, faster speed, inside HD, 1 meg floppy and, and...

But it still has the 4096 colors, DMA sound, and blitter chip. So that does explain the STe part of Mega STe.

Soon to write an FAQ on the whole thing...

I'm pretty sure you'll need at least 1MB of RAM to run Notator. It will run very well on any ST with 1MB. Monochrome needed.

Hard drive not necessary.

Good Luck.

There is a bug in TOS 1.0 and 1.2, when you install an application, it doesn't save the pathname to the program. You must save the desktop, load DESKTOP.INF into a text editor, and add it yourself. Make sure your text editor doesn't strip trailing spaces or odd things happen...

Ummm... I had stated earlier that I had a copy of STOS if it would have
helped anyone here. I did so because of the "obscure" and "defunct"
statement
that was made. I made a mistake, the package I have is STAC. I paid a
dollar
for it at the Sacramento show. It is, in fact, far more "obscure and
defunct"
than STOS :). I though I had better make this clear :)

Yeah, it didn't help, so somehow locking files on the ST locks the file in
UNIX in some "invisible" way.
I guess we just need to be aware of this and be sure to unlock files before
we upload them.

I've asked this before, but I lost the information about it....

There seemed to be some Gopher site which let people access Maus newsgroups even if they didn't get it through their Internet provider- does anyone know the address?
Or... perhaps there are web pages with Maus access?

By the way, I can access some of the Maus groups myself through the normal news setup here, but I was thinking about making links on my pages for people who don't have that.

I think that's the hard way to get at them. On the back of the printer,
toward the center and just above the parallel printer connect cable is
a rectangular access door. If you unscrew the case enough to lift the
top up slightly, you can remove that plastic cover and viola' you have
access to the dip switches. I use tape to keep the plastic door just
hanging over the opening so I can just flip it up when I want to set
the switches (needed for switching the printer between the Atari and all
other computers. - have to change the end of line switch - 2nd switch
set, 2nd switch - Atari is towards parallel connector, others are toward
center of printer

I'd suspect that there was a tongue firmly in cheek, however I am aware that
it is possible to use 250Meg capacity tapes in a Wangtek 150ES streamer.

So does anyone know what the max capacity of these 150Meg streamers is, and
what is the limiting factor?

Regards, Derryck

I am selling an ICD hard drive unit. It is the under monitor case with a 105mg Quantum hard drive. It has the ADSCI + host adapter in it (including time clock) and has all ICD software, documentation, and DMA cable. It has been a great unit (very high quality case and reliable). The ICD software is installed and the unit is set up to be bootable. A second SCSI hard drive can be installed in the unit also. I am asking only $80 plus shipping, and I am in California, so a sale in the US would be the best. Shipping weight is about 11lb. Please Email me at RJRE@AOL.COM if you are interested.

I need help! I have a Mega ST4 with TOS 1.2 and a 60meg hard drive. My problem is that I would like to install applications. For example, when I double-click on a .ZIP file, the ZIP archiver would be automatically loaded. However, thanks to TOS 1.2, I have to put the ZIP archiver in Drive A: in order for everything to work. I have tried editing the DESKTOP.INF file to get TOS to go into the STZIP26 folder in Drive D: but this has not worked. Is there a patch program that will fix this TOS 1.2/hard drive problem?

>
>Seems like a video setting problem, but I have tried all combinations
>of columns, colours & compatibility modes to no avail. Yes, I have
>booted using the Control key.

Hmm...I believe I got it from Toads ftp site and it worked fine. Well,
I had to boot up "clean" using the control key to disable all ACC's
, Auto prgs., and CPX's...Do you still have the original archive? If
you do, how about checking it for validity to make sure its still in
good shape. Aside from that how about re-downloading it? (and maybe
from a different site?) I know thats a pain in the neck but--IMHO the
game is worth it! Good luck with your endeavors... :)

PS I just looked and its set up like this:

Drive H:\WOTANOID\ (on my Falcon)

DATA (folder with 29 items, 1,000,868 bytes) (inside WOTANOID folder)

S_JUNGLE.MOD 139086 bytes]
THALAMUS.MOD 100040 bytes]-----These three in the WOTANOID folder.
ASTERJEF.PRG 97472 bytes]

Well, I hope this helps! :)

5753. SCSI Experts: please help!

Newsgroup: comp.sys.atari.st
Date: 1996-09-28 00:00:00 UTC
From: csh@falcon.sdi.agate.net
Message-ID: <843977008_OASIS_@falcon.sdi.agate.net>
Source record: 136907
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

hello all,

I've got a falcon, and I recently bought another external hard drive, which brought my total up to three. When I first tried to use all three drives, I got a "output device is not recieving data" error and then all three drives became un-operable.

Then, I removed the SCSI terminator from the last drive, and everything seemed to work fine.

So, what's the deal with termination? I thought you had to have a terminator at both the beginning and end of the SCSI chain. As it is now, the drives only work when there's a terminator at the beginning, but not the end.

Can anybody help me out, and maybe explain to me about termination? Up till this point I though I had it figured out.

Thanks a lot,
--chris

What are you calling the Beginning? It is NOT the first drive.
The Beginning is the Controler, in your case, the FALCON. The End,
the physical end is the last drive on the cable. This is the only drive that
should be terminated.
I take it the new drive is at the end. With terminators installed
it fails, correct? Where are the terminators on this drive receiving their power
(+5V) from? On newer drives, this is done with patching on the drive.
My preference is to patch them to use the +5 Volts from the drive itself,
not the bus.

Hope this helps; Rich Mier

5756. Atari SG-10 printer--ribbon?

Newsgroup: comp.sys.atari.st
Date: 1996-09-29 00:00:00 UTC
From: namor@unixg.ubc.ca
Message-ID: <52md88$r7g@nntp.ucs.ubc.ca>
Source record: 136760

Someone just acquired an Atari SG-10 printer, very second-hand, and it will probably work, but she needs a new ribbon. Where do these things come from anymore? Is there anything generic/alternative/existent which will work?

Personally, I'm not even sure what a SG-10 looks like or how old it is, and my reputation for practical wisdom could be at risk here. Help.

>I assumed he is _trying_ to leave out Falcon owners.
>
>Since I remember you posting this information once before, I assumed
>anyone not fixing the STOS software for TOS 4.x was doing so
>intentionally.

The mist clears :)....I think I see the confusion here?, You can fix programs made in STOS to work on the falcon, yes even a fully fledged platformer or any arcade or serious app,
But making it run on the falcon is only half the job, eg: the game I was making would boot up and run on the falc no problem, so Anthonys fixer program worked fine,
But because the Falcon is a beast of power, then it sorta worked too well and went like the clappers, one estimation was that the little hero sprites was going aproximatly 170 miles per hour :)

I have always stated and maintained that I would love to support the falcon more, would love to own one and would die for the chance to utilise all that the falcon has to offer, but until I actually have one in front of me, then the task is just too hard,

>
>(Tony - this is why I was very confused by your message - I had just
>read that there was a generic fixer for TOS versions including 4.x,
>and you kept saying that you were writing programs just for ST
>folks. It sounded like you _wanted_ to exclude Falcon owners. We got
>crossed up somewhere there. Sorry.)

well we sorted this earlier in email i think <smile> and i can see where people get confused, plain and clear is, i tried to make it run on the falcon, but at the end of the day can't, i must be a little interested to have tried? ,

Taking all this into consideration, I can see yours and other peoples views, and it would be a sad world if we all thought the same :), But I hold to my views that a program made on an ST, should not be put down or knocked when it wont work on a computer that is not an ST, a bit black and white I know, but plain and simple :)

Cheers.............!ynoT

5760. NVDI + AW + Falcon

Newsgroup: comp.sys.atari.st
Date: 1996-09-29 00:00:00 UTC
From: bili6745@mach1.wlu.ca
Message-ID: <DyH8DI.9DL@info.uucp>
Source record: 136764

I would like to thank those who helped me figure out why Gembench came back
telling me the my Falcon ran slow... It was my cashe turned off just like
many of you suggested <thanks> ;-)

My real problem seems much more unusual. NVDI 4.10 Seems to run only in a limited fashion on my Falcon. Using the 180 dpi. epson driver I can print from atari works or Arkus with no problems. If I set the driver to epson 360 dpi, My system bombs out as soon as I try to adjust the page setup or print in atari works (also bombs out while attempting to print at 360 dpi in Arkus.)

I do not really know why this problem exists but it does. I tried installing NVDI 4.1 from disk today but if made no difference.

I'm not sure if this relates to the above BUT my system also bombs out if I install the desk accessory, SELECTRIC.ACC and try to print at 180 or 360 dpi.

I have included the list from my auto folder and acc's in the order that they are executed on boot up. I think that ALL of the files are set up to run in fastram (BlowUp-FX.) With the below set operating 180 dpi is fine and 360 dpi results in a frozen screen or bombs (often 4 or 11.)

Just in case your wondering, Atari Works will not print at 360 dpi even if the only installed
programs are: FXdrive, and NVDI.

ACC

Blowacc.acc
callslct.acc <-Causes the system to fail printing at both 180 and 360 dpi
gramslam.acc
xcontrol.acc

AUTO

Stoop
Fxdrive
NVDI 4.10
WDialog
Fpatch2
Maccel34
Led Panel
Letemfly
Slectric
Fprint
Blowboot

I would feel greatly better if someone can see somthing that might be causing me to hand in all my essays printed at 180dpi. (First one of the year is due Thursday ;-)

Keith

5762. Re: DMA Cable! What Mac Cable can you substitute for it?

Newsgroup: comp.sys.atari.st
Date: 1996-09-29 00:00:00 UTC
From: Lonnie McClure <lmcclure@delphi.com>
Message-ID: <ZPNwkt7.lmcclure@delphi.com>
Source record: 136766

Mac monitor cables are DB-15's so that definitely could not be substituted for an Atari ST DMA cable.

However, external disk drive cables for Macs (and the Apple IIc and IIgs) are DB-19 cables, and therefore, might work as a substitute.

> need it at least 4-5 feet long..

Forget it. I would say 3 feet is about the longest DMA cable that would work reliably. There is a reason why the cables that come with the megafile are so short ! The DMA is simply not able to drive excessively long cables.

> Well my first problem is... I can't seem to find 19 pin db connectors
> anywhere!! I called about 10 computer shops and about 7 electronic shops
> with no luck!

Unbelievable ! An electronics supplier that cannot even sell Subminiature D shape 19 pin connectors ?? I do not know where you live, and even if I knew I probably couldn't tell the situation there. I know RScomponents is present in many countries around the world, they'd have the connectors.

> dead.article (0%)Also when I do find them.. do I just solder pin 1 to the
> other pin 1 and
> so-on? Or do I have to go backwards.. pin 1 to the other pin 19 and so-on?

Nonono. Pin 1 to pin 1, pin 2 to pin 2 ...

> I was thinking of cutting up my DMA cable that I have now and extending
> it but then I'll be without none!

Don't, as you will need it after you found that your long one doesn't work properly.

Cheers Peter

Kelstar is now up and coming and starting to level out into a nice diskmag after its hmm shakey start,

>Tony, the only one I've heard of is Maggie - got a copy from a
>CD-ROM - and it didn't work well with my Falcon & monitor. :(

Ho dear:(, suppose it would depend on how old the copy was, dont mean age of disk, but what issue, Maggie was about before the Falcon?, I just yesterday at the English ATARI shows saw Maggie ruuning on a falcon, woooooo BUITIFULL!! and they have a new ST shell?,

BTW MAGGIE 21 was released at the shows everyone,

>Where do we over here in the USA find these? Are they 'public
>domain', or purchased, or what? Does anyone keep back issues around?

The ones mentioned are all PD/Freeware, as indeed all diskmagazines should be, I personally dislike any diskmagazine that charges, unless they are paying there writers of course?, but to me, a diskmag by definition should be a hobby production,? so yes free:)

>Maybe someone could put out a CD rom of all disk magazines...

but as some diskmags are monthly and some blah blah, then the cd would always be oput of date,

You can find back issues of most diskmags from ftp sites, sorry no exact details, I have links to the stosser ones on my page, but would not reccomend them to anyone unless you are a STOS freak ;)

If more then 2 or 3 are interested, I will put together some sort of list of current ATARI diskzines, where available and when released etc etc ect

hmmm how about a diskzine FAQ:)

From: Frank Pawlowski <flp@straight-edge.mv.com>
Message-ID: <324F01CA.6075@straight-edge.mv.com>
Source record: 136773

Straight Edge Software announces Version 3.4 of OutBurST!. The new version adds code to speedup output even more when being used with NVDI 4 (probably 3 also, but I haven't tested it). Now any printer driver included with NVDI is accelerated to the remarkable speed of the OutBurST!/JetSpeed combination.

Typical results using a Falcon and an HP LaserJet 5P when printing 5 pages of text using Papyrus are listed in the table below.

Seconds to Print Out 5 Pages in Papyrus
(All data sent to Printer)

300 dpi 600 dpi
NVDI & TOS 466 1646
NVDI & OutBurST! 3.3 143 534
NVDI & OutBurST! 3.4 34 154

Note that even though the HP 5P cannot print 5 pages in 34 seconds, the Falcon completed sending all of the data to the internal print buffer in the HP 5P in 34 seconds.

Updates are available to registered users. Send EMAIL to flp@straight-edge.mv.com for ordering information.

Frank,
Straight Edge Software

>Don't use Connect, cause the author is a PC user.

I don't know whether Wolfgang Wander (the author of CoNnect) is a PC user but I guess this wouldn't be a reason not to use his excellent program. CoNnect works fine on a Falcon and AFAIK it really is still being developed. However, the author has a full-time job and a family which is why there haven't been any new versions for quite a long time.

If Wolfgang ever decided to stop developing CoNnect any further he'd publish a general key so everyone could use the program without limitations -- that's what he wrote some time ago in a MausNet newsgroup.

>Don't listen to the Mint fanatics, because Mint is a bit outdated.

Well, I just read that there's a new version of MiNT around (v1.14) -- what's so outdated about it? I use MagiC myself most of the time but I like MiNT as well. If I had more RAM (i.e. more than 4 MB) I'd probably use it all the time, even though it's a bit slower than MagiC. MiNT is rather something for the adventurous and curious user who wants to learn and use the features of a Unix-like environment. On the other hand, I'd say that MagiC is great at providing a fast and stable environment for everyday use like word processing or graphics.

> Do I remember that the Zip drive requires term_power as well?

No, it doesn't require TRMPWR, but it doesn't provide it either.
Hence, if you're using an ICD Link or similar host adapter which requires
power from the SCSI bus, it won't work unless you wire in a jumper.

Does anyone know of an Atari prog to help write Web pages? I've got a PC one which I can run on ATONCE but I have to keep flipping back to CAB to make sure I've got it wrong. And there's no help files either and the guy who wrote it isn't at the shareware address. What an unusual story.

Arthur, struggling on.

Let me just say that I know nothing about this subject :)

My nephew wants to get into Notator and STs. He's seen an ad for a 520stfm
for £25. Is it useable with Notator?

My main question is; What spec machine is useable/best with Notator? Will a
520stfm suffice, does he need a h/d, more ram etc?

Any comments would be much apppreciated, Gary.

: complete path to a good ftp site...Thanks in advance... :)
:
: PS Which AVI files should I look out for? (what makes
: one work with M-Player and one not?)

M-player works with about half the avi files I have tried. Sadly the type of avi file is NEVER listed on ANY ftp server (because QuickTime for Mac/Windoze can play _all_ types AFAIK...). There is now AVI030.LZH on ftp.cnam.fr too! This plays sound on the fly rather than preloading it. It doesn't support CVID video format yet (the most COMMON format! :( ), and I've yet to find an avi that it is happy with...

It is a lottery when grabbing avi's. I have grabbed a four meg avi only to find that it wasn't correct type to work 100% (boy am I patient with only a 14k4 modem!!).

If you know anyone with the All Things Falcon CD-ROM, the avi files on that work fine...

NOS runs quite happily on my 1 mb STe. MintNet I don't know about.

d> Don't let any ISP tell you that Atari's aren't capable of accessing
d> them! Any ISP that offeres SLIP or a shell account will do for small

d> once gasped in amazement because I could actually get my Atari to
d> connect and use their account! So if they tell you this, chances are,
d> they have no idea what they're talking about. Of course, I could be
d> wrong. ;)

In my experience you're entirely right! Most providers give the
impression that only a PC or Mac will work with their service but I suspect
what they really mean is that they can only supply software or
technical support for those machines.
I've used NOS on both a SLIP and a PPP connection. It can be a pain to
set up if you're not fluent in techno-babble but a few questions in this
newsgroup, and/or a peek at others cfg. files, will soon sort things out.
There's also the Oasis 2 package which seems quite versatile, let's hope
the imminent(?) 2.06 release irons out the remaining problems, and STiK
is reported to be supporting CSLIP and PPP in future versions.
In short, anyone who tells you that you can't get on the Internet with
an ST doesn't know their arse from their elbow! :)

My experience is that real life SCSI termination doesn't follow any of the rules.

On my TT030, I find it works best having the computer and first drive terminated.

On my Falcon030, it usually works having the first drive only terminated, but sometimes (depending what physical order I have the devices in) I must also terminate the last device (as expected). But I found that plugging the terminator in on the through of the last device would not usually work, and it had to be plugged in line with the last device.

But in general, I think the rule is to terminate the first and last device. My experience is that this doesn't work then just try all the other things I mentioned above until you get it working.

Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hi all..!

I'm building a DMA cord for my megafile (cause I don't wanna pay an arm
and a leg for one!) I actually have one but it's only 2 feet long and I
need it at least 4-5 feet long..

Well my first problem is... I can't seem to find 19 pin db connectors
anywhere!! I called about 10 computer shops and about 7 electronic shops
with no luck!

But I'm still looking! If someone knows where to get them.. pick me up
a couple and mail 'em to me and I will pay you! (I know this is
unlikely.. but had to ask!) :)

dead.article (0%)Also when I do find them.. do I just solder pin 1 to the
other pin 1 and
so-on? Or do I have to go backwards.. pin 1 to the other pin 19 and so-on?

I was thinking of cutting up my DMA cable that I have now and extending
it but then I'll be without none!

Any suggestions?

Please reply to e-mail!

Thanks!

Johnny

Good luck! If you read the "readme" and "install" docs you should be fine.
mail me if you want to install it from a harddisk and I'll mail you the
setup file for that, otherwise you'll have to edit one of the disk-install
files yourself.

PS. Why have you set up your editor in such a weird way?
Your text always starts 5 characters from the left. If you start from the
very left you get to place more characters on each line!

Also, your signature is 10 lines too long- a signature should be no longer
than 4 lines (a lot of people, like me, download news/mail using an
offliner, and if everyone makes signatures like that we'll be having more
than enough downloading signatures!).

Source record: 136859

Just a quick note to say that there is a load of stik updates now available on my www page. The original WWW package is no more everything is released seperately and there is a new install program to install everything into one neat directory structure for you. the updates include the following.

Cab 1.41
STiK 1.11
Cab.ovl 1.20
Finger 1.21
AtarIRC 0.61
cache ed 0.5
and www install 1.00

Have fun. New programs will be appearing from now on when they are ready for release no waiting back for other programs to release new www packages although a cut down www pack including stik/cab/cab.ovl will be appearing from time to time for the people only interested in the web.

Nick.

5794. Refreshing News Group List

Newsgroup: comp.sys.atari.st
Date: 1996-09-30 00:00:00 UTC
From: bkozlowski@nordnet.fr
Message-ID: <844135666_OASIS_@nordnet.fr>
Source record: 136661

In article <844018810_OASIS_@icis.on.ca>
ccook@icis.on.ca (Cliff Cook) said:-

>How can I update my newsgroup list using NOS and OASIS. The new
>newsgroups come in every day; but I would sure like to eliminate the
>garbage which has accumulated in my list. It would also be very helpful
>to limit the list to groups which my ISP makes available.

You can get the active newsgroups list from your newsserver by
recording a telnet session, and editing a little the resulting file.

Once online type 'telnet your.isp.newsserver 119' and quit the session
with F10. Then at the NOS> prompt type 'record filename' and go back to
the telnet session. type 'list' and watch all groups scrolling... for a
long moment! (with my Compuserve newsserver and it's 16000 groups it took
20 minutes or so...)

You can also type 'help' to see all recognised commands, 'date' to
verify the newsserver GMT (Oooops! UTC, scuse...) time is set correctly,
etc... At the end type 'quit' to end the telnet session and close the
recorded file.

Now take your prefered editor and delete all stuff before and after
the list of groups in 'filename'. And with your powerfull prefered editor
set a macro to delete the end of each line after the first space. Because
the list will be something like:

comp.lang.c.moderated 0000004564 0000004473 m
comp.lang.clarion 0000001671 0000000988 y
comp.lang.cobol 0000010446 0000010079 y
comp.lang.eiffel 0000012935 0000012596 y
comp.lang.forth 0000022480 0000022082 y
comp.lang.forth.mac 0000001054 0000001023 y
comp.lang.fortran 0000034979 0000033978 y

This is: name of the group, high-message, low-message, and flags. If
'high' is lower then 'low', there are no articles in the group. Flags can
be 'm' for a moderated group, and 'y' for an unmoderated.

Once you have a clean list with only the names, you may want to sort
the list, with one of the freeware "ascii sorters" or 5 lines of GFA basic
(or code a quicksort in 68K?). Rename filename as SPOOL/NEWS/NG and that's
all!

So easy, why the NOS programmers haven't put a command to do it
automatically, like the 'nntp newgroups on' command? ('nntp getactive'?)

Bye! Bruno.

5796. What ftp site for CAB v1.41?

Newsgroup: comp.sys.atari.st
Date: 1996-09-30 00:00:00 UTC
From: thechyld@pcc-uky.campus.mci.net
Message-ID: <844200642_OASIS_@pcc-uky.campus.mci.net>
Source record: 136663

Well, the title says it all, really...What ftp site (and path) can all of us mere mortals (you know, the ones that do NOT have any SLIP access !!!) goto and download this new version? BTW, does it do at least CSLIP (and hopefully PPP)??? Thanks in advance for any info! :)

5797. NVDI + AW + Falcon

Newsgroup: comp.sys.atari.st
Date: 1996-09-30 00:00:00 UTC
From: Andre_Leistner@b.maus.de
Message-ID: <199609301823.a40156@b.maus.de>
Source record: 136664

>Just in case your wondering, Atari Works will not print at 360 dpi even
>if the only installed programs are: FXdrive, and NVDI.

Do other programs print at 360 dpi? (try Kandinsky, IdeaList, Qed, Cab etc.)

>callslct.acc <-Causes the system to fail printing at both 180 and 360
>dpi

Selectric comes with a CPX which can call Selectric from XControl. Using the
CPX would also save a bit of memory, since a CPX only needs 512 bytes of RAM
(if not resident).

5798. Re: DMA Cable! What Mac Cable can you substitute for it?

Newsgroup: comp.sys.atari.st
Date: 1996-09-30 00:00:00 UTC
From: Mike Wasinger <mwasinge@nyx.cs.du.edu>
Message-ID: <325017F8.3A7B@nyx.cs.du.edu>
Source record: 136665

I've been using 12" of ribbon cable and two modified DB-25 IDC
connectors.

Just remove the pins that you don't need. The plug still has enough
friction to hold on just fine.

```
o o o o o o o o o o x x x
o o o o o o o o o o x x x
```

A female connector DB-25 to DB-19 conversion requires a small saw and a
a file. The connector is not pretty, but it has worked for me.

Mike

I've just more or less left the world of Atari and am trying to sell
as much of my stuff as possible. Since I am almost obsessive with my
possessions, much of the stuff is in very good condition. Terms are
as follows:

Make me an offer; best reasonable offer will be taken.
Purchaser pays all shipping.
I will wait for personal checks to clear before shipping.

Feel free to e-mail for more information.

The list:

Parts: D - Includes Disk(s)
B - Includes Original Packing Material
M - Includes Manual(s)

Item Description Parts Notes
1 1MB 1040ST DBM
2 1MB 1040STE B
3 4MB 520STE DBM
4 SM124 Monochrome Monitor B
5 SC1224 Color Monitor BM
6 Panasonic 1091I Mod2 Printer BM
7 Master 3S External Floppy BM Double Sided/Double Density
3-1/2" Floppy Drive
8 Avatex 1200HC External Modem BM 1200 Baud Hayes Compatible
9 Atari SX212 1200 baud modem Hayes Compatible, also has

Works here in Canada but I must admit the first time I failed in
putting in the OVL so it wouldn't connect . But I soon found the error
of my ways and it now works perfect ! Now if Stick had PPP and if the
new MG-FTP were part of this package it would be complete .
P.S. When will Cab have ftp configured directly in the program ?

Hello! I recently put a post about my 1040STe that suddenly didn't have
any power going to it. My dad took a look at the power supply and said
that something burned in it. Does anyone know where I can get parts to
fix it? My dad can fix it, but he just wants to know where can he get
some parts to fix it.

If anywhere, it should be on Kay Roemer's web page:

http://zeus.informatik.uni-frankfurt.de/~roemer/

Just checked (man, Lynx is fast :)), and v1.01 is definitely there, in
binary and source form.

So what does this mean? The text only talks about PC, Mac and Amiga. Does
this mean that we can use it on the Atari, but can't realy do anything
usefull with it as thre isn't any software for it?

Anyway, it does sound cool. :-)

That's interresting. So which is the latest version of CoNnect then?
If it's still being developed it must have commed out a new version since
2.46 (or was it 1.46 or 1.76? :-)) as it's as old as shit. It's a great
program though.

Source record: 136713

Hi, I got the New package and it is weird..
My old package WWW131 worked perfectly, IRC, CAB, finger, telnet etc
etc.
But this new one Cab doesn't want to work. It search for ever trying
to make the connection..
I think the problem comes from the new CAB.OVL since CAB itself works.
Just the connection between CAB and stik doesn't work..
The new STIk works very well with IRC in GEM etc ..
So I am still using the old CAB with the old CAB.OVL.
If someone has the ne CAB and the new OVL working with STik 1.11
please tell me.
What is wrong with my setup... And the worse is that my old package
was working really great.. Thanks bye..

You are naive, aren't you?

My recommendation: Don't expect anything,
then you can't be disappointed!

The Atari 'community' is really bad regarding feedbacks!
I work in the Unix/X community now, and there's much
more response (see http://www.esc.de/homes/guivol/fixpix/)!

Regards,
Guido

BTW: You can watch me at http://www.esc.de/digifoto/ and
then following the 'Fair' link, or directly
http://www.esc.de/digifoto/bik-live.htm.
Just working on it to be completed...

I remember reading about a similar case in California where a child had kissed another child (on the lips I think). The authorities assumed that such sexual behaviour could only have been learnt at home and therefore the parents were abusing the child!

What thois has to do with alt.war I don't know...

Mint-net contains long filenames. People want Mint-net because it is much better than Stik, but cannot use it without installed a minix partition because of the long file names (not to mention the documention/install utilities)

>I can never understand why I just got the things and installed them and it

>Really peculiar! I simply unarchived MiNT, copied MiNT to the auto folder,
>unarchived MiNTNet and copied the drivers to the /c/mint folder. What
>could be easier? CAB was also easy to install, simply by unarchiving it
>and double clicking on the program icon.

AIUI you also have to edit/configure a lot of files with your IP addresses, hostnames, routing info, and get all of the necessary demons and so on to run from MINT.CNF. You also have to get hold of programs not in the Mintnet installation (such as syslogd and pppd) to make any use of it.

>Of course if you want a full unix setup, things of course get more complicated.
>If all you want is an internet connection, well I can't see what is so difficult
>about it.

? To run the install script supplied with 0.80 (haven't seen 1.xx yet) you have to already have a unix-shell up and running. If you understand SH shell scripts, you might be able to do it by hand, but if you can do this, then you can probably set up the unix stuff anyway.

Its possible using a separate fixer. Unfortunately all the values that STOS
needs have to be in a table, which when it was written in 1988 they thought
that there would only be 10 versions of the OS, so this is the size of the
table. Unfortunately, there are now far more, so it 'aint possible without
getting hold of the STOS source-code (or hacking basic/compiler), which isn't
going to happen according to Europress (the distributers of STOS)

no No NO!!!

I DO NOT want you to install a CLI if you dont want to. MiNT and MiNT-net
DO NOT need a CLI to work. However, you really need one to install it
(which is what I am objecting to!).

MiNT-net has many GEM-based apps, such as DU-FTP and CAB, and you can
use Glue-stik to use any Stik app accross PPP with mint.

Na, just too much hassle trying to get it to run _properly_ on a Falcon. :)

>Since I remember you posting this information once before, I assumed
>anyone not fixing the STOS software for TOS 4.x was doing so
>intentionally.

Yea, Tony did get it tested (eg. I tested in on the Falc) and found that modifications needed to be made to make it work as intended. As he wanted it out fast (for the shows :) it wasn't practical to do all the necessary modifications to make it work perfectly.

>Really? Mint does all that? I've had ST and better Atari computers

Yep, good, 'aint it. Some people even see the long filenames (optional) as an advantage. :)

>since '87, and all I know is Mint is buggy, bad, and not worth much.
>That's what 'everyone' told me. Never bothered to try it. Thought it
>died when Atari Corp. went to the Jaguar. So, I'm certainly in the
>98% you mention! :)

Yea, MiNT got a lot of bashing due to the slow AES that Atari bundled with it as part of MultiTOS. However, MiNT has been in the PD since it was first created, and people have continued to make it better.

Recently people have been releasing replacement AES versions which show just how slow the 4.0 version with MultiTOS was.

>It's a little confusing - Mint, Mintnet, Linix, AES-something, Lynx
>and what-not. I've no idea if any of these even belong together.
>But, I'm just a simple dirt farmer, so I guess it's not
>surprising... :) :)

:-)

Here is a quick run down then:

MiNT - the main bit that does the multitasking.
MiNT-net - the networking stuff, and supports SLIP, CSLIP, PPP etc.
AES [ie. AES 4.0, AES 4.1, XaAES, oAESis, N-AES etc]
- this is basically multitasking GEM - MiNT can be used without these, but isn't as good (or easy to use).
MinixFS - Minix was like Linux, and had long filennames. MinixFS gives MiNT a file-system using the same format.
Lynx - a text-based WWW browser

Linux - a replacement OS which is like Unix. Versions for PC, Amiga
- etc also available.

Hope this is some help.

I have the following Atari ST system forsale:
(forsale as a system only, no pieces-parts, please)

Atari 520ST
-1 meg RAM installed

External DS/DD Drive (Atari Brand)
Indus GTS-100 external DS/DD Drive
Another Atari Brand DS/DD Drive (no case)

170meg Hard Drive w/case + powersupply

Color Monitor (Atari Brand)
Monochrome Monitor (Atari Brand)
Monitor Switchbox

Atari Mouse
Mouse for Atari (not Atari Brand)

Lots of Misc. Software (Legitimate)
-Video Capture Card
-Word Perfect
-Calamus DTP
-GFA Basic 3.0
-Misc. Other Word Processors
-Misc. Other DTP Programs
-Misc. Games

Seikosha SP-1000 9pin Dot Matrix Printer
-Lots of new Ribbons
-You can still buy the ribbons

***Asking $300 plus shipping costs per your
request. Please email with offers and questions

>
>Sounds great! I was wondering if other non-STOS games will run as well.

It may well do. I cannot gaurentee that STOS games will work with it - all
I know is that I the STOS editor runs without any problems on it (but I
dont have it - almost bought it on saturday though)

>But if I end up using MagiC under Gemulator then I'm back were I'm

>> GEM progs will do this...
>
>Darn straight. Anything with a window, menu bar, and frequent AES calls
>can multi-task. It's so freaking simple, for any GEM program that is.

Yep. The only problem is dialogues. Many older programs use these, as they
are simple to create, and form a nice interface. I recommend getting
FLD Lib which lets you create non-modal windowed dialogues easily for
anyone who likes using dialogues but isn't a GEM guru.

>> have the sample on the Falcon is that Atari re-defined one of the frequencies
>> of sample playback, making it an 'off' state... clever...)
>
>Geez, I didn't even knew this. Since you have a Falcon with STOS working
>on it, then you're the expert to ask. :)

hehe. yep, I have sussed out most of the things needed to get a STOS (or other)
prog working on the Falcon - but I put a load of tips in the doc's to GenFixer,
so this should help. (eg. ren from .PRG to .TOS - suprisingly this makes the
graphics routines [line-a] work much better!)

>Ok, since the game I'm writing will use DMA samples for the STe I was
>wondering what way to do the same on the Falcon. But I'll get to that later.

well, just dont use '0' as this is off. Put in your doc's to cold boot, as some
other program might set the sound system to 16-bit, which you will need to
change back (easy by writing to a mem address) if you dont cold-boot.

and DONT pack your program with Atomik!!! [causes a bus error on a Falcon]

I had similar problems, the MX80 is indeed an ancient relic, one if not "the" first epson dot matrix for the public consumers to emerge on the market. I remember paying over ï¿½450 for mine!
Unfortunately the MX80 doesnt have FX compatiblity, the only programme on the atari that ever worked with it (and not very well) was funnily enough a very early version of Pagestream. All other "epson compatible" software and GDOS drivers wont work, regardless of the dip switch settings. If you really are interested, I might be able to dig out the old version of Pagestream I used, but its VERY buggy and unstable and not really worth the trouble!

Simon

no, they dont mean 'a canceller which cancels messages by rogues'. ;)

Someone has maliciously been cancelling valid messages, and some sys.admin type as been automatically re-posting articles which should not have been cancelled. Unfortunately, some of us had read the cancelled messages before they were cancelled...

If you want EVERYTHING, the price is $140. Please send e-mail
requests. I reserve the right to reject any offer. Buyer pays shipping, COD
required without money order/cashiers check/personal check.

Atari hardware:
Atari 520STM, 2.5M, JRI 4096 color board, TOS 1.4 $50
--note, the RF shield was removed(and lost) to install the RAM upgrade
--note, the TOS is UK, so I wrote a boot sector & a auto program to
switch the HZ to 60HZ.
1 DSDD Roctec RF302R Disk drives(external) $15
1 atari RGB color monitor $30
1 atari mono monitor $20
(NOTE:shipping[via UPS] on monitors is between $10-$20 excluding COD)

all hardware in orig package with exception of mono monitor.
all hardware works great.
all hardware listed above for $90.

Atari programming books:
Computes Tech. Reference: Atari ST: AES
Sybex: Programmers Guide to GEM
Abacus: Atari ST GEM Prog. Ref.
Atari ST 3D Graphics
ST Disk drives, inside and out
Atari ST Internals
All books are $5.00 apiece or all of them for $25.

All software is original and works just fine. All software include manuals.
Price is $3.00 each single software item($2.00 each additional item). For
example, two games would be $5, three games would be $7, etc...
All of the software below for $50.

GAMES UTILITIES
Legend of Faerghail Word-Up 2.0 & 3.0
Shadow Sorcerer Assempro
Demons Winter Synchro Express
Gunship ProCopy
Borodino Copy II ST
Fiendish Freddy's Big Top O' Fun WERCS

I really think that when something new is available for atari, it
should be here. I didn't even know what you were talking about .
Last time Ben Allfree just released a freeware for the falcon, and he
said it, come and get it.. No problem.
But most of the time Atari users have to browse for hours to find
something..
Maybe it is not good to write every new things on the newsgroup, 'coz
nobody will browse the ftp just like that to discover things that the
other users don't know about.. Who knows. But I like the idea to have
all the new software written in this newsgroup. Like that everyone is
at the same level..
Thanks..

>www packages although a cut down www pack including stik/cab/cab.ovl
>will be appearing from time to time for the people only interested in
>the web.

Well, I gave up trying today. Demon is SO SLOW!!!! After two hours
of trying to get CAB 1.41 (the text says 1.4) @574315 bytes, I quit for now.
BTW, for the future, PLEEZ put dates and sizes for the individual files.
When trying to download with Stik/cab it gives up before the end and
you wind up saving a partial file. Using lynx, it took two hours with
only a partial. Please put it on some FTP site that will download faster.

No - you need 1 meg RAM minimum.

>My main question is; What spec machine is useable/best with Notator? Will a
>520stfm suffice, does he need a h/d, more ram etc?

You don't need a hard drive, but a mono monitor is virtually essential
(Notator will run on a TV in medium res, but it's _horrible_).

So minimum: 1 meg st (stfm is fine) plus mono monitor.

At the simplest, you can buy a book on HTML and use any text editor. As
an acessory, Edith or Steno make good choices. Then you take your
pictures and use a good converter to get them into the GIF format, try to
interlace them if you could for those nice people with Netscape :)

Or, you can get Everest and a kerzel(?) that makes HTML pages a breeze on
the HENSA site. Of course it's a matter of time before someone writes an
author program for the ST, but since HTML files are just ASCII text then
this would be a simple matter to say the least.

Yeah, I've seen those web page authoring programs for the PC...but they
are so freaking expensive!!! The very high price makes it unjustifible
since you can download a GIF program and text editor that does the same
crap only without the bells and whistles. I guess it's just more of the
Billionare Bill mentality these rich geeks have to suck your money away. :(

OK, guys, this is turning into an advocacy thread. We have a newsgroup for
that.

Some like Ratsoft.
Some like Octopus.
Some like QBBS-ST
Some like ST-Keep
Some like STadel
Some like BB/ST

Who cares, really? In the long run, if the sysop is happy, and the users are
happy, that's great. And when it won't do what you want any more, and something
else will, you switch. How hard is that to understand?

Anyhow, if we're going to continue the discussion, see followups in
comp.sys.atari.advocacy.

Get the Radio Shack blue plastic jobs that have 25 pins - you can remove a few pins rather easily with a soldering iron and a pair of needlenose pliers. Plus, ribbon cable is much easier to deal with than the round shielded cable - just clamp the plug on. And yes, do observe pin 1 to pin 1.

Now I recall seeing one of those beasts in a German electronics store, lo, these many years ago... Price was WAY up there. I could have bought a used Mercedes at that price at that time. And I did. <G>

That was an interesting machine, though. IIRC, it used a different motherboard than the 520ST, but look identical (except for the logo on the top of the case, of course).

If that's what I think it is, it uses a ribbon on a spool, like an old
typewriter. Have her take the old ribbon and spool to an office-supply store
and see what fits. I would advise agaisnt the 2-color (usually red and black)
ribbons, though, unless she wants very odd-looking output.

Well Karl,

When you use an Atari you are never alone. Atari users are a very supportive group and through the beauty of usenet and the internet, you will always have a friend or willingly helpful stranger to comfort you on your journey. I have always found this to be true of Atarians more than any other platform...

If it's actually the drive that's failed, about US$25.

>how much is a new (or used) disk drive???

Any PC drive that allows you to switch the drive ID will work; you can contact RAM Turbo computers in Portland, OR, for a 720k drive - I got 2 for a total of US$4 - or talk to a local dealer about getting a new drive for about $40. You won't be able to get a 720k drive from most places (only 1.44 meg drives are made nowadays) but the high density drives work fine; you just get 720k on the old Atari controller.

Hello James Bond! (your email address) ;-)
So you're on a mission on Sweden now? hehe...
Anyway, a 520ST has 512 Kbytes of RAM.

Hallvard, from your neighbouring country

K. Ellis (kellis@primenet.com) wrote:
: Hi, I got the New package and it is weird..
I had a similar problem, but reinstalling the old CAB.OVL (from WWW1.3) with the new CAB solved the problem. Much as I like the Netscape-like "Stop" Button, it doesn't seem to do anything (especially something like stopping a proceedure in the process of being executed...), but hammering on the Esc key still works (hit it twice quickly to abort a process).

Seems like the new CAB.OVL doesn't like the new STIK. Oh well...

>how much is a new (or used) disk drive???

Don't know how much you'd get for an ST in the USA, but for the disk drive
you can use a standard PC type 3.5".
I've been using a Sony MPF-520-1 drive for a long time now in 720K mode
(for 1.44Mb you need some additonal circuitry and possibly an AJAX chip).
mail me if you need more info.

5855. 2.5" IDE drive on an STE ?

Newsgroup: comp.sys.atari.st
Date: 1996-09-30 00:00:00 UTC
From: paz@wile.demon.co.uk
Message-ID: <844206676_OASIS_@wile.demon.co.uk>
Source record: 136755

Hi everyone,

Well, we just got back from the London Atari show (which was excellent, I spent *far* too much money ! :))) where I bought a nice new 810 meg 2.5" IDE hard drive for my Falc. :))))

So what ? You say...

Well, we're wondering of there's any way we can attach my old 127 meg 2.5" IDE drive to my mates' STE. I thought System Solutions did something that connected to the cartridge port to enable the STE to use IDE stuff (CD-ROMs, hard drives, etc.) but apparently, their supplier can't get 'em anymore :((

Does anyone know where I can get a piece of kit to connect this drive ? I'm wondering if Toad in the US do 'em and if so, is anyone importing their products ?

Any help would, as always, be *very* much appreciated :))

Thanks fellow Motorollers :))

See Ya,
Paz.

5856. Truetype to Calamus?

Newsgroup: comp.sys.atari.st
Date: 1996-09-30 00:00:00 UTC
From: fl@io.org
Message-ID: <52pg0v$qpt@news1.io.org>
Source record: 136756

Is there anyone out there who has the programs that allow you to convert Truetype 1 Fonts (.TTF) to Calamus (.CFN)? I have a two fonts that I have been using extensivly with Atari Works and now I would like to have them available for use in Calamus.

Would anyone be willing to perform the conversion through an email exchange?

Thanks,

I just copied the new bits of CAB into the folder, with the new CabOVL in its separate folder. Never messed with STiK at all. CAB seems to work fine. Maybe the trouble's with STiK?

In article <ftn_2.200.136.68$fidonet.org_a293b346_Patrik.Estberg@p68.dada.ct.se>
patrik.estberg@p68.dada.ct.se (Patrik Estberg) said:-

> > -comms/modem/FAX
>Don't use Connect, cause the author is a PC user. Instead yuo should use
>STarcall because it is still in progress.

So sad... Connect 2.46 is a great program.

> > -music
>If yoy want to work as a professional musician you should use Cubase.
>If you're into trackers you should use Graumf tracker because it is the best
>tracker for the Falcon and it is still in progress.

Not Graumf! It's name is Graoumf tracker. And yes, it's great, and the
last version is 0.8665 at ftp.cnam.fr/pub/Atari/Falcon/Music/gtk08665.lzh.
The docs are now in English too. There is another very good tracker,
Digital, and after a commercial release in v1.2, the author will release
v2.0 back to shareware status soon.

>This weekend the new WWW packet will be released and hopefully the Newsreader
>will be included in the packet.

If only the new stick release could have PPP mode... If not, I think I
will finally go for Mintnet, with the quick and easy install docs from
Abel Philippe (no Minix partition, no slow AES 4.1, only 1.6Mb disc...).

>There is also a new Webbrowser developed in France that is told to be
>fully Netscape compatible.

If you talk about WebSpace by OXO concept, we have seen screen shots
in french STMagazine, but the editor doesn't reply to emails... STMag said
also that the TCP/IP/PPP stack will be independent of the browser, and
usable by other programs. A fourth way, after Mintnet, Stick and NOS...

>I will get you my own top ten listing.
[snip]
>5. Music Graumf Tracker, Cubase Audio, Megatracker Replay
^^^^^^
Graoumf I said! ;-)

>8. Editor Everest

Everest 3.5e is really great. Someone has registred it recently? The
author is still in Atariworld? I use it more and more, especially as an
external editor for Oasis 1.35, it's perfect for this task.

>9. Graphics Shower 1.1, Apex, GEM View

Shower 1.1 is the last version? It's very fast, and I like it's instant zoom function, but it has some bugs, like with the Amiga IFF format pictures, or some rare problems with GIFs. By the way, someone knows a GIF viewer fully GIF89a compatible? Like multi-pics animated transparent WEB GIFs? :-)

bye! Bruno.

MIRROR SITES

FTP mirrors are alternative sites to certain popular ones which are
usually under a high load most of the time (many people accessing them
at the same time).
Mirror sites contain the exact same directories and files, but have
different entry points. Try to use the one closest to you geographically
and not during business hours (in that geographic area).

MAIL SERVERS

Mail servers can be used to get hold of the same software as through FTP,
but instead of using a lot of download time online, files can be 'ordered'
via email.
In order to get information about how to do this, send an email to the
various addresses below with the word: help
in the mail itself. If possible, do not include any 'signature' in the mail,
as the automated system which replies to these mails tries to interpret any
message (and with a certain amount of errors no response to your requests
will be given at all).

Email server email address Equivelant to FTP site
----
atari@atari.archive.umich.edu atari.archive.umich.edu
mail-server@ftp.tu-clausthal.de ftp.tu-clausthal.de
mail-server@cs.tu-berlin.de ftp.cs.tu-berlin.de
archive-server@Germany.eu.net ftp.germany.eu.net
ftpmail@ftp.uni-stuttgart.de ftp.uni-stuttgart.de
ftp-mailer@ftp.informatik.tu-muenchen.de ftp.informatik.tu-muenchen.de
archive-server@micros.hensa.ac.uk micros.hensa.ac.uk
mailserver@leo.org ftp.leo.org

___

The examples below are taken from a Unix environment using the usual
'ftp' program. The more user friendly 'ncftp' is recommended though,
as it's easier and more efficient to use.

[1] Starting FTP/logging into FTP site
======================================

What to type What it does
----
ftp [ENTER FTP MODE]
open FTPsite-address (i.e: open ftp.funet.fi) [OPEN THE FTP SITE]
anonymous (when asked for username) [INSERT USERNAME]
USERNAME@SITE (your email address- i.e. hallvart@sn.no) [INSERT PASSWORD]

Example:
----
oslonett.no% ftp [ENTER FTP MODE]
ftp> open ftp.cs.tu-berlin.de [OPEN THE FTP SITE]
Connected to caramba.cs.tu-berlin.de.
220 caramba FTP server (wu-2.4/fb13[34] 18-Feb-1995) ready.
Name (ftp.cs.tu-berlin.de:celine): anonymous [INSERT USERNAME]
331 Guest login ok, send your complete e-mail address as password.
Password: celine@geonet.com [INSERT PASSWORD- (NOT SHOWN)]
230-You have reached Berlin, Germany. Access is allowed all day.
----

* You can also enter a site and start ftp at the same time:

ftp FTPsite-address (i.e: ftp ftp.cs.tu-berlin.de) [START FTP/OPEN SITE]

Example:
----
oslonett.no% ftp ftp.cs.tu-berlin.de [START FTP/OPEN SITE]
Connected to caramba.cs.tu-berlin.de.
----

* It's also possible to use the IP number instead of the usual FTP
site address:

ftp IP.number (i.e: ftp 130.149.144.4) [START FTP/OPEN SITE WITH IP NO.]

Example:
----
oslonett.no% ftp 130.149.144.4 [START FTP/OPEN SITE WITH IP NO.]
Connected to 130.149.144.4.
220 caramba FTP server (wu-2.4/fb13[34] 18-Feb-1995) ready.

___

```
ls -l (or: dir) [SHOWS A DIRECTORY LISTING WITH FILE-LENGTHS]

** Some FTP sites don't accept 'ls -l' for some reason. In those rare cases
use 'ls' instead (or use 'dir').

Example:
---------------------------------------
ftp> cd Music/ [MOVE TO DESIRED DIRECTORY]
ftp> bin [SET TRANSFER MODE TO BINARY]
200 Type set to I.
ftp> ls -l [SHOWS A DIRECTORY LISTING WITH FILE-LENGTHS]
150 Opening BINARY mode data connection for /bin/ls.
total 4624
-rw-rw-r-- 1 ftpadm atarimod 3409 Feb 19 12:48 00INDEX
-rw-rw-r-- 1 ftpadm atarimod 37419 Mar 18 1993 50play12.lzh
-rw-rw-r-- 1 hesche atarimod 105936 Jul 24 1995 525_v211.lzh
-rw-rw-r-- 1 ftpadm atarimod 168363 Mar 10 1993 accomp25.lzh
---------------------------------------

* If you want to go back one directory:

cd .. [GO BACK ONE DIRECTORY]
cd /. [GO DIRECTLY BACK TO ROOT DIRECTORY]

\_\_\_
```

```
#######################################
226 Transfer complete.
ftp>
---------------------------------------

* You can also use 'wildcards' to ease the whole procedure of typing file-
names correctly:

Example:
---------------------------------------
ftp> mget ma* [GET ALL FILES STARTING WITH 'ma' IN CURRENT DIRECTORY]
mget maccell33.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for maccel33.zip (9012 bytes).
###################
226 Transfer complete.
mget mauswind.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for mauswind.zip (49373 bytes).
#############################################################################
#############################
226 Transfer complete.
mget maxidisk.zip.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for maxidisk.zip (20970 bytes).
#########################################
226 Transfer complete.
ftp>
---------------------------------------

* you can also use a 'wildcard' to get hold of single files or a specified
selection. Just be sure the wildcard is unique.

i.e. if you want to download 'stzip26.lha' and there are no other files which
start with the letters 'stz', you can type: mget stz*.

You can also download all files within a directory with a single
command: mget *

PS. you have to use 'mget' with wildcards- 'get' won't work!

Hint: if you're using 'mget' a lot and don't want to be asked if you want this
file or not, you can use the command 'prompt'. FTP will then proceed to get all
the files that match your wildcard without asking if you want them.

Example:
---------------------------------------
ftp> prompt [TURN OF 'GET THIS FILE (y/n)?']
Interactive mode off.
ftp>
---------------------------------------

\_\_\_
```

close [EXIT CURRENT FTP SITE, READY FOR A NEW FTP CONNECTION]

Example:
---
ftp> close [EXIT CURRENT FTP SITE, READY FOR A NEW FTP CONNECTION]
221 Goodbye.
ftp> [FTP IS READY FOR A NEW CONNECTION- 'OPEN...']
---

quit [EXIT CURRENT FTP SITE/FTP MODE, RETURN TO UNIX]

Example:
---
ftp> quit [EXIT CURRENT FTP SITE/FTP MODE, RETURN TO UNIX]
oslonett.no% [BACK IN UNIX]
---

* When doing a 'close' and re-entering a new FTP site you won't have to set
up features like 'bin', 'prompt' and 'hash' again.
You will however have to set it up again if you choose to 'quit', then
restart FTP.

>>>

A SHORT SUMMARY OF FTP COMMANDS/PROCEDURE
==========
ftp
open {FTP site address} [OPEN FTP SITE]
Username: anonymous
Password: {your email address}

cd {directory/directory etc.} [GO TO DIRECTORY]
bin [SET TO BINARY TRANSFER MODE]
hash [DISPLAY '#####' CHARACTERS FOR VISUAL CONFIRMATION OF DOWNLOAD]
ls -l (or dir) [FILE/DIRECTORY LISTING WITH LENGTHS]
get {filename} [GET A SINGLE FILE]
mget {filename filename filename filename} [GET SEVERAL FILES]
quit [EXIT FTP SITE/EXIT FTP MODE]

Other useful commands to know
==========
stat (or status) [DISPLAYS USEFUL INFORMATION ABOUT SETUP]
prompt [TURNS ON/OFF 'GET THIS FILE (y/n)?']
get {filename} - (i.e: get 00index -) [DISPLAYS TEXT FILE ONLINE]
!host {FTP site} (i.e: !host ftp.sn.no) [SHOWS IP ADDRESS OF SITE]
help [DISPLAYS A LIST OVER FTP COMMANDS]
help {command} (i.e: help bin) [EXPLAINS COMMAND]

FTP commands

! escape to the shell
$ execute macro
account send account command to remote server

```
append append to a file
ascii set ascii transfer type
bell beep when command completed
binary set binary transfer type
bye terminate ftp session and exit
case toggle mget upper/lower case id mapping
cd change remote working directory
cdup change remote working directory to parent directory
chmod change file permissions of remote file
close terminate ftp session
cr toggle carriage return stripping on ascii gets
delete delete remote file
debug toggle/set debugging mode
dir list contents of remote directory
disconnect terminate ftp session
form set file transfer format
get receive file
glob toggle metacharacter expansion of local file names
hash toggle printing '#' for each buffer transferred
help print local help information
idle get (set) idle timer on remote side
image set binary transfer type
lcd change local working directory
ls list contents of remote directory
macdef define a macro
mdelete delete multiple files
mdir list contents of multiple remote directories
mget get multiple files
mkdir make directory on the remote machine
mls list contents of multiple remote directories
mode set file transfer mode
modtime show last modification time of remote file
mput send multiple files
newer get file if remote file is newer than local file
nmap set templates for default file name mapping
nlist nlist contents of remote directory
ntrans set translation table for default file name mapping
open connect to remote tftp
prompt force interactive prompting on multiple commands
proxy issue command on alternate connection
sendport toggle use of PORT cmd for each data connection
put send one file
pwd print working directory on remote machine
quit terminate ftp session and exit
quote send arbitrary ftp command
recv receive file
reget get file restarting at end of local file
rstatus show status of remote machine
rhelp get help from remote server
rename rename file
```

```
reset clear queued command replies
restart restart file transfer at bytecount
rmdir remove directory on the remote machine
runique toggle store unique for local files
send send one file
site send site specific command to remote server
Try "rhelp site" or "site help" for more information
size show size of remote file
status show current status
struct set file transfer structure
system show remote system type
sunique toggle store unique on remote machine
tenex set tenex file transfer type
trace toggle packet tracing
type set file transfer type
user send new user information
umask get (set) umask on remote side
verbose toggle verbose mode
? print local help information

** Most of these commands work as 'on/off switches'. Each time you enter the
command it switches over to the opposite position (from on to off or
vice versa). If you're not sure about it's position, type: stat
(or: status) which will show your setup.

Be sure to check if transfer mode is set to 'bin'!!!! (if you try to
download binary files in ASCII mode all your downloads will be useless!-
You can download text files as binary as well, though you sometimes might
have to convert the end-of-line characters afterwards-
(get hold of 'unix2st.ttp' or similar program for this).

_/_/_/

m>
m> I have never been able to get STZip to keep long filenames, case
m> sensitivity, etc. Do you use different zip software?

I didn't explain that too well. If someone else creates an archive which
contains U/L case and long filenames then I see this within STZip. I
don't/can't create them myself.

m> LZH does keep the long filenames, but I have found that it has problems
m> keeping the access flags properly. For example, what was an executable
m> when I put it in is sometimes no longer executable when it comes out.
m> Has anyone else had this problem?

Urgh.. Have you investigated all the options in the shell and explained in
the manual? It seemed to have a fair amount of support in this area.

I also notice that v3.11 of the TTP (not the shell though) became available a
shortwhile ago, so it seems that Christian is prepared to fix significant
problems with LHArc if he knows about them. Try it.

m> I would suggest that since gzip and tar seem to be more standard than
m> zip or lzh, and they all work just as well, why not use the ones that
m> are standard.

They are not standard on the Atari. I've never seen them anywhere else than
on obscure ftp areas. They may be standard on some alien platform but that
really doesn't interest me. (sorry if that's curt).

*> protection. And
*> one of the reasons I don't play games much.
Actually you can forget disk 1 as you only actually need disks 2,3,4.

Disk 1 just contains the intro's and if you boot from disk 2 you skip all
that. So it may be possible to boot fropm disk 2 with disks 3 and 4 on the
1.44Mb floppy.

e>
e> What is this SMD-100 MPG-playing hardware? Is it for the ST/Falcon or
e> only the Amiga?
e>
e> BTW. What is HiSofts policy to Lattice C? Will it be any upgrades?

Answering the last point first, the last time they were asked about Lattice
the answer was that while they were aware of various bugs in it, they were
unlikely to continue development of it due to the resources it would consume.
Take this as no further development...

On the SMD-100, here's their press release on it. At the Brum show, Richard
K was very confident about its quality and performance and its advance over
anything else currently available. Sorry for the long post btw...

==========
> Date: Thu, 5 Sep 1996 13:14:02 +0100
>
>What actually is it? Is it dedicated to the Amiga platform or something
>that can be used with an Atari?

Pleae find details below. Basically it will work stand-alone with any
compatible CD-ROM drive. So Atari owners who have purchased a CD-ROM drive
from us should be able to use it.

SMD-100 - Video CD MPEG Decoder

What is SMD-100 and what is MPEG?

The SMD-100 is the new Video CD and MPEG decoder from HiSoft Systems. The
decoder can be used as either a stand-alone unit connected to a SCSI CD-ROM
drive or as a device in a chain of SCSI peripherals connected to a computer
(extra software required).

As a stand-alone unit the SMD-100 can be connected to any television or video
recorder that has a SCART, composite or SVHS socket to produce crystal-clear
playback of Video CD films in 24-bit colour and 16-bit stereo sound.

As a SCSI peripheral the SMD-100 becomes an indispensable addition to your
computer, allowing playback of MPEG and Video CD titles from any PC, Mac or
Amiga that's equipped with a SCSI port.

Cased in a sturdy, all-metal enclosure, the SMD-100 looks at home next to any
Hi-fi, VCR or Multimedia Computer.

Each frame of a movie requires a great deal of disc storage space. A typical movie contains more than 150,000 frames so to squash as much video and audio data as possible onto a single compact disc a technique called MPEG compression is used.

Thanks to MPEG compression a Video CD can contain up to 74 minutes of superb quality digital video. The audio, although compressed, is so near the quality of compact disc digital audio that the human ear cannot tell the difference.

At the heart of the SMD-100 is a state-of-the-art computer chip containing not only a 16-bit-microprocessor but also a dedicated custom processor which can rapidly decode and play the heavily compressed MPEG video and audio in realtime. This means you get smooth and sharp full-screen, full-frame playback all the way.

Video CD is a technology that enables you to play video and audio material from compact disc. Video CD grew from CD-i technology and is designed as a standard so that you can play high quality movies on compatible computers as well as on Philips CD-i equipment.

Technically, Video CD is known as White Book format and CD-i movies are known as Green Book format. The SMD-100 plays both these formats.

Because the playback of pictures and sound is so good, Video CD has become the perfect medium for music videos and motion pictures. There are now thousands of Video CD and CD-i movie titles available for all the family -cartoons, soaps, sports, documentaries, wildlife, comedy, erotica, karaoke, plus of course smash hit music videos and bigtime movies to sort all tastes. Video CDs don't take up a lot of shelf space.

Video CDs wont jam or stretch.

Video CDs have higher quality sound.

Video CDs have higher quality pictures.

A few questions you may have:

Will it work with my CD-ROM drive?
If your SCSI CD-ROM drive supports Video CD format disks then yes, the SMD-100 will work with it.

What CDs will it play?
All Video CDs, Karaoke CDs - and it plays CD-i movies too!

What's the picture quality like?
Much better than with standard video tapes. The combination of slick action, sharp colours, rock steady freeze-frames and silky-smooth slow motion is a real treat for the eyes!

What's the sound like?
CD quality with Bitstream DACs brings cinema sound into your living room.

SMD-100 specification:

* Decodes Video CD 1.1 and 2.0, Karaoke CD 1.0 and CD-i movie standards using a compatible SCSI CD-ROM drive (must support Video CD - check instructions or contact supplier).

* Supports display resolutions of 352x240 at 30Hz (NTSC), 352x288 at 25Hz (PAL).

* Plugs directly into any 2xSCSI CD-ROM drive or faster.

* Compatible with PAL and NTSC discs.

* All display and playback functions controlled from the supplied infrared remote control.

* CD-ROM controls include play, pause, fast forward, rewind, slow motion, track select, output signal select (RGB, composite video or SVIDEO), genlock select and standby mode (on/off)

* Can be controlled from a SCSI-equipped computer using suitable software. Requires optional software (not included), contact HiSoft Systems for further details.

* Custom software is possible for large orders, tailored to suit your company's needs. The design of SMD-100 was entirely in-house, so we know the product inside-out.

SCSI

* Includes two SCSI 50-way amphenol connectors to allow easy connection to your SCSI CD-ROM drive or SCSI bus.

AUDIO OUTPUT

* Stereo output via a suitable SCART cable allows direct connection to an amplifier or Surround Sound processor.

* High quality 16-bit 44.1kHz audio using Bitstream DACs.

VIDEO OUTPUT

* 24-bit RGB, composite video and SVIDEO output (requires additional lead) using 21-pin Euro/SCART connector.

* Built-in RGB genlocking capabilities for use with 15kHz computer genlocking systems.

* Automatic scaling of output to PAL or NTSC using either PAL or NTSC discs.

FRONT PANEL

* Power/standby and command LED.

* Remote infrared sensor.

BACK PANEL

* Power jack socket.

* 9-way D-type video socket for genlock connection.

* Two SCSI 50-way amphenol connectors.

* 4-way dip-switch for SCSI ID and SCSI termination.

* 21-pin Euro/SCART connector.

DIMENSIONS

* 170 mm (W) x 58 mm (H) x 145 mm (L).

POWER INPUT/OUTPUT

* Power input 110/120V U.S., 220-240V Europe.

* Power output 9V @1A to 2.5 mm centre positive jack.

* Fully approved, CE marked.

Regards,

Luke
--
HiSoft News (please email for more details):

1/ The SMD-100 VideoCD Decoder (formerly known as Squirrel MPEG) is to be released in September at an initial price of UKP199.95. We recommend that interested parties place orders now to avoid disappointment. Please contact me should you require details. Company orders are welcome and custom software is also possible, tailored to suit your company's needs.

Dai Mercy wrote this to All about Only In America HAHAHAHA!:
DM> 'He didn't bully anyone, swear at a teacher or commit an act
DM> of vandalism. Six yr. old Jonathan Prevette simply planted a
DM> kiss on the cheek of a classmate. But in the PC paranoia of
DM> modern day America, his innocent act of friendship was
DM> adjudged to be sexual harrasment. Jonathan's teacher reported
DM> him to the school principal and he was given a day's detention
DM> in a room on his own, missing out on a colouring session and
DM> an ice cream party.'

This "sexual harrasment" thing has gone out of proportion and the self-elected morality "experts" have lost their grip on reality -that's for sure - but please tell me: what does it have to do with Atari computers? COMP.SYS.ATARI.ST is not the right newsgroup for this discussion...

Best regards,

Claes

I know that MiNTNet v1.0 (or was it v1.01?) has been released, but I can't seem to find it anywhere.

If you know where this is, please let me (and everyone else!) know.

Thanks!

Sounds like a different problem, as this one never does anything other
than a white screen with a yellow border. I have since replaced the
glue and MMU with little success. I now think it could be faulty ram,
so I will get the logic analyser on it today.

5878. Cubase Audio on Atari Mega STe?

Newsgroup: comp.sys.atari.st
Date: 1996-09-30 00:00:00 UTC
From: v.e.bakker@getronics.nl
Message-ID: <52o0pl$om2@dinkel.civ.utwente.nl>
Source record: 136801

Is there someone out there doing Cubase Audio on an Atari Mega STe?
(especially the audio part).
If it works, I'd like to know:
- what hardware setup is used (i.e. how do I get them vocals and guitars on
disk)
- how the quality of the audio works out
- how many channels can an STe handle
- what's the recommended size for SCSI disk

thanks for any help on this one.

greetz,
Vincent

John Dooley (dooley@infomatch.com) wrote:
: Hi all..!

: I'm building a DMA cord for my megafile (cause I don't wanna pay an arm
: and a leg for one!) I actually have one but it's only 2 feet long and I
: need it at least 4-5 feet long..

No idea whether that'll work, but I'd guess rather not...

: Well my first problem is... I can't seem to find 19 pin db connectors
: anywhere!! I called about 10 computer shops and about 7 electronic shops
: with no luck!

My supplier here in Hannover, Germany, sold me a Mac monitor cable that
looked like, and works like, an Atari DMA cable. Maybe such a thing will
be easier to find?

: But I'm still looking! If someone knows where to get them.. pick me up
: a couple and mail 'em to me and I will pay you! (I know this is
: unlikely.. but had to ask!) :)

If you absolutely don'Tt find them, which I consider unlikely ;-), mail
me and I'll do that... I can only get the cable, though.

: dead.article (0%)Also when I do find them.. do I just solder pin 1 to the
: other pin 1 and
: so-on? Or do I have to go backwards.. pin 1 to the other pin 19 and so-on?

No idea... if noone else tells you, mail me and I'll have a look in the
Profibuch.

: I was thinking of cutting up my DMA cable that I have now and extending
: it but then I'll be without none!

Baaad idea. Imagine it doesn't work... and then you'll have to undo
it.

Yours,
Erik.

Ehhh.. no one. :-)
It's a secret. :-)

No, to be serious I have asked Doug about it and he said that it wouldn't be to hard and I have talked to a guy who has a Super Nova+AB040.

Speedy kit...

Exactly! And why havn't anyone done this ages ago?
I know that Craig Graham talked about doing a installation program for
MiNT-Net, but I don't hink he got around doing it.

It can't be that hard, can it? Just a question of putting the correct files
in the correct directory and type something in a setup file and of you go.

> By the way, it's making me very pleased to hear you speaking about the

It does it and alot more. I think you also can use it together with
various Ethernet Cards to set up a network

> since '87, and all I know is Mint is buggy, bad, and not worth much.

Well, the latest versions of MiNT > 1.12 isn't buggy, bad or anything
else.

> That's what 'everyone' told me. Never bothered to try it. Thought it

MiNT hasn't died! It's now called FreeMiNT and is up in version 1.14
released just some days ago.

> It's a little confusing - Mint, Mintnet, Linix, AES-something, Lynx
> and what-not. I've no idea if any of these even belong together.
> But, I'm just a simple dirt farmer, so I guess it's not
> surprising... :) :)

Well, I realy shouldn't be sitting here talking about MiNT and everything
around it as I don't know much about it either, but I know what I have
read and tried my self. MiNT is very good and stable, but I have not
much use of it as I don't know how MiNT-Net works and I can do everything
I want under MagiC. But one thing I can't do and that is running a stable
internet connection as I can't get MiNT-Net to work. :-(

There must be some guys in here who knows more! What about the man who has
done MiNT-Net in the first place? Can't he read news?
